No place to escape, at all. It could be that advertising is so
effective that they want to make use of it everywhere possible.

I doubt it's the greedy bastards on Wall Street. More like the greedy
bastards in the marketing department. Let's remove all the marketing
departments from all companies and see what happens. You think the
economy sucks now, just wait until advertising disappears.

From: hfaisal@aol.com
Message-ID: <tcit5n1b5p3422@corp.supernews.com>
Source record: 14883

I was in DC and saw an announcement in the paper the WGAY would go off the air April 1 or 2, and that the format would change to talk radio with new call letters. Where can a listener who loves "The Music of Your Life" format tune into? Is there an internet site, a subscription service, or do I have to wait for satellite radio to hit the market?

WCBN WILL DESTROY YOUR FEEBLE FORMATS

WCBN - Over 25 Years of Freeing Your Mind - Listen to us online!

WCBN is the University of Michigan student-run community freeform radio station in Ann Arbor, Michigan. We broadcast at 200 watts to the University and its surrounding communities from the basement of the Student Activities Building in downtown treetown. We have been broadcasting a genre-less overview of music, news, and public affairs for over 25 years.

WCBN's musical format is freeform, with some specialty shows. Freeform involves all different kinds of music, including jazz, reggae, blues, hip-hop, country, rock, and just about everything else under the sun. Instead of telling our DJs what to play, we allow them to select their own recordings from our vast and unique library. It is their responsibility to mix together many different kinds of music in an intelligent fashion, and show links between musical genres.

Click here to listen to our live WCBN-FM Ann Arbor RealAudio broadcast!

You bring up a question and your timing is great.
I will relate your question in the form of the "T" word because the scenario is similar here.

I was in Venice (Florida) today and noticed there was no "city grade" signal in Venice from Channel 62.
The new station is WVEA, Venice-Tampa.
A couple of years ago, a request was applied for by the previous owners to change the TL of independent WBSV from Venice to Riverview. Last Year the station was sold and taken dark in January of this year. They returned to the air this past week as a full power Univision affiliate.
I was told the new owners are the same owners who had low power Channel 61 in Tampa.
But Riverview is 50 miles from Venice. The signal is there, but certainly could not be considered a city grade signal.
Whether the new owners have a request to change the COL to Tampa, I do not know. The target demographic would be inclusive of Tampa far more than Venice.
The hyphenated visual ID is irrelevant because it is still the legal call letters followed immediately by the legal city name.

>But isn't cable and dish tv networks the same as subscription tv? HBO
>ain't being given away!

I suspect that although DishTV & DirecTV recently won a round with signal bootleggers that the struggle isn't over yet. Any signal sent over the air presents long intervals for attempts to decode said signal with little chance that others will know. Cable TV has one advantage, it requires a direct hookup, but even that doesn't prevent some "entrepeneurs" figuring out how to get said signals. Digital cable may cut down on this, but I'm sure that illegal decoding still has some market. One of the problems for the original subscription tv schemes was the simplicity of the encoding, but one channel also wasn't enough to get revenue unlike cable which offers not only premium channels but other content like CNN, Weather Channel and the like (so do the satellites) as their basic service.

There are still a few major cities that have a MOYL or similar service.
Cleveland comes to mind with WRMR 850 and WKHR 91.5 - which is more
"pure". Boston now has fairly good service during the day from WCRN 830
Worcester with its new 50 kW. WPEN Philly has lots of listeners but
focuses well into the 1960s rather than earlier.

I've heard that XM Satellite Radio is going to have a "40s Swing"
channel, and they have hired Jonathan Schwartz (ex WQEW, etc) to do a
"Jonathan Schwartz" channel.

Yes and no and it depends! Commercial FM stations must show on a map that their predicted city
grade contour covers the entire city of license. There are some exceptions where not all of the
city has to be covered. But this is only hypothetical coverage on a map. There may well be terrain
issues that prevent a station from actually putting a real world 70db contour into the city.

Non Com stations and translators didn't until recently have any such requirement, but now have to
put 60db over at least part of the city of license.

1629. Imus off WXYT 1270 Detroit?

Newsgroup: rec.radio.broadcasting
Date: 2001-04-04 04:47:49 UTC
From: Ron Hardin <rhhardin@mindspring.com>
Message-ID: <tcl9rl5lam9p94@corp.supernews.com>
Source record: 14891

Imus was gone this morning from WXYT 1270 Detroit, and instead it was ``Tiger Opening Day'' a live series of interviews with anybody at all down at the ball park. The interview with the man running the hot dog concessions was particularly apt, all done with the sports-radio air of excitement that has done so much to discredit it.

Perhaps it is a temporary displacement, meant only to serve as a warning to Imus that the station is run by idiots.

The reason Imus does well at sports-format stations is that it proves that the station does not take itself as seriously as you might believe, that is to say, the station has a modicum of respect for your intelligence in fact, no matter how much drivel it puts out for the rest of the day.

WXYT is new to sports and doesn't know this.

I think that more> important than clubbing up with EZ fans is clubbing up with the remaining Hi-Fi> Beta owners, pooling parts to preserve the remaining machines and attempt a> lend-by-mail system for people with unique content to archive.>
One thing to remember is that turning all these tapes into MP3, and doing the job right, is far from a trivial task. It takes a considerable amount of skill and effort to do this properly. You have to have the proper computer and soundcard, it is very difficult to get the line audio connection noise-free, ridding it of ground loops and other noise pickup. The recording level needs to be set properly, software must be used to record up to 6 hours at a time without interruption or interference from other computer activities. The files must be converted to MP3, etc. etc. The project could take months of working at it several hours a day. Maybe more like producing a movie than just going to one.
Apart from the legality/morality/ethics of hosting potentially copyrighted material online where would one get several hundred gigs of space and server and bandwith capability to host it?

I would be <<highly>> interested if anyone has any old recordings (i.e. analog tapes) of EZ music in working on converting them to digital.

I have done some converting to digital although the beta did quit. The tapes are something I don't want to keep any longer, what I really want is for them to go to whomever can put them best to use. I am not selling them or trying make money, it's just I realize these are too unique and valuable to just toss out. Hopefully one or more persons who has equipment to play them, will enjoy them, and share them others (i.e via this newsgroup) in the future. I just want them to go to whoever can best put them to use.

At least one respondent (in Tennesee) has expressed interest in the tapes. I got your email.

As far as the VCR is concerned, I am doubtful it can be repaired but if anyone can convince me they have the know-how to repair it and make use of it I will send it to them. The problem is that the reel drive motor doesn't turn with enough torque to keep the takeup reel moving, the unit frequently stops and locks up while playing the tape. A few years ago I paid Sony about $200 to replace the motor but it's highly unlikely

they still would carry the parts.

> One place to start would be the Dead Media Project. This page...> > http://www.deadmedia.org/notes/index-cat.html>

Unfortunately this site makes no mention of Beta VCR's at all.

New delivery system, same old> groupie laments! <g>.>
Don't get me wrong, 833 is a very good channel to listen to if you like EZ music. It is wall-to-wall stringed instrumentals, totally commercial free, there aren't an ever-increasing number of vocals put in by misguided program directors in a desperation move to increase their 25-54 numbers while alienating their true audience. It just would be nicer if they had a larger playlist, but Music Choice still has a much bigger playlist than radio (they claim 2500+ per channel but I don't think 833 has nearly that many). It's still as good or better than anything radio has ever played. Note this is the DSS satellites for home use, I don't know what exactly will be offered on the mobile satellite radios yet. If you have not heard this go to any place that sells DirecTV systems and punch in channel 833. There are also other satellite channels which play instrumental covers which can be received with a small dish.

Music of Your Life is webcast 24 hours a day by Yahoo! Radio--and it happens to be their Spotlight Station today:

http://radio.yahoo.com/

Yes, Milton, we know.

>>
I am sensitive to that construction type, and I don't see that either around
here. Keep in mind, the west coast is less densley populated than the east.
>>

On the West Coast, KNBR uses a conventional capacitive hat on the top section
of this sectionalized tower.

There are qute a few top-loaded towers around here, but most use the guy wires
for such loading.

1250 in Santa Barbara has a pair of top-loaded towers using capacitive hats ...
looks pretty much like WNEW's old towers ... self-supporting and top-loaded.

Doesn't make any sense to top load a self-supporting tower using guy wires ;-)

General rule ... self-supporting top-loaded towers usually have hats ... guyed
towers usually don't have hats (they use the guy wires) unless the
cross-section is very large, say about three or four feet, in which case the
tower is stong enough so there would be no guys near the top anyway, and any
top loading would then be accomplished using a hat.

KOA Denver and whatever WMAQ, Chicago is now have top loaded towers.
They were used in a number of installations to increase the effective
height of the tower and lower the radiation angle.

The station is still licensed to Venice and to my knowledge has no permit or application to change the city of license.

They do have a CP to move the transmitter from the old site a few miles east of Venice to a site in Riverview, FL east of St. Petersburg. I don't see any other TV stations (except low-powered TBN station W68CF) authorized to the same tower, but I'll bet the tower belongs to one or more existing FM station(s). The move also includes a significant increase in antenna height. (from 167 meters to 476, an increase of some 900 feet)

Of course, in Florida terrain obstructions are not an issue!

I don't have hard evidence but it sure looks to me like the new site is close enough to Venice to provide a city-grade signal there. Maybe they're still working on the new transmitter site and aren't up to full power yet?

Actually there is a 250w DA in AZ that we have to protect on 1190...
However.......

> If you start out with a figure-8 pattern that protects the two existing Class A
> stations (KEX and XEWK) and then add backside cancellation to protect those

We don't have to protect KEX that much...(especially since Clear Channel
owns it!) If I recall there is something in Part73 about "agreed
mutual interference"....I doubt Clear Channel will argue with itself;
besides, Lowry Mays wants Aggie football on the air in Dallas..if it
cannot be heard in the northern areas (like Addison, etc) that kinda
defeats the purpose :)

> My guess is the current 12-tower array could be reduced to 10 towers.

My guess would be running the day site at 5kw at night would work..
unless the night site could be opened up a little to the west from
Rockwall...that would cover the northern areas of Dallas without
causing problems with KEX...but I am still concerned about the
AZ station..

1640. WGAY in Washington

Newsgroup: rec.radio.broadcasting
Date: 2001-04-06 20:24:29 UTC
From: Elephant <elephant@the-zoo.com>
Message-ID: <tcs9ft50rubda7@corp.supernews.com>
Source record: 14801

To the poster who asked about WGAY in Washington.

I've never heard the station but you mentioned
that they played "The Music of your life" format.

That could cover a number of formats, but one that
comes to mind is KOMJ-AM in Omaha, NE. 590kc

Their logo is "the music of your life"

They can be heard on the internet at:

http://playlist.broadcast.com/makeplaylist.dll?id=318668&s=78015886:G&encad=2F6164732F6D61726B6574696E672F686F75736561645F313132353938

If that link is too long, just go to broadcast.com and search
for Omaha radio or KOMJ-am

I think their web site is still under construction, but they
are broadcasting live on the net.

Hope this helps.

>

Does anybody know how this will work for LPFM's? For instance, in rural, unincorporated areas, your address is often that of a city or town many miles away, yet your signal couldn't possibly reach that far.

I have a specific instance in mind where the community in question is about 18 miles from the post office that serves it. I am under the impression that as far as the FCC is concerned, the mailing address for the facility designates your "City of License", not the name of the unincorporated community. Am I mistaken?

Any clarification would be helpful.

Chuck

>The hyphenated visual ID is irrelevant because it is still the legal call
>letters followed immediately by the legal city name.

Ch62 is still "WVEA-TV Venice" according to
http://svartifoss.fcc.gov:8080/cgi-bin/ws.exe/prod/cdbs/pubacc/prod/sta_det.pl?Facility_id
=16788
No idea what kind of coverage there is.

There is also a listing that may be outdated at
http://www.fcc.gov/fcc-bin/tvq?call=wvea
from the channel 61 that is now at 36, licensed to Tampa itself.

ObRRB: I hope the FCC is going to do with the AM (and TV) listings what they
did with the records for FM station. Have you done a search there recently?
Neato.

WCBN WILL DESTROY YOUR FEEBLE FORMATS

WCBN - Over 25 Years of Freeing Your Mind - Listen to us online!

WCBN is the University of Michigan student-run community freeform radio station in Ann Arbor, Michigan. We broadcast at 200 watts to the University and its surrounding communities from the basement of the Student Activities Building in downtown treetown. We have been broadcasting a genre-less overview of music, news, and public affairs for over 25 years.

WCBN's musical format is freeform, with some specialty shows. Freeform involves all different kinds of music, including jazz, reggae, blues, hip-hop, country, rock, and just about everything else under the sun. Instead of telling our DJs what to play, we allow them to select their own recordings from our vast and unique library. It is their responsibility to mix together many different kinds of music in an intelligent fashion, and show links between musical genres.

Click here to listen to our live WCBN-FM Ann Arbor RealAudio broadcast!

WXYT was supposed to start a new local morning sports talk show with Jeff Lesson, but word is that it's on the back burner now because the station is "looking for a morning show."

What that exactly means, I'm not sure, but look for Imus to eventually move to an 8 AM to 10 AM slot if the local show flies. That being said, Imus and XYT are in the Infinity fold, so he won't be without a radio home here in Motown.

Imus returns to LA on Apr 30 on KPLS 830. I hear this is a Catholic
Family Radio station, and I am wondering: what's up?

That's some gutsy management! But I have trouble imagining how
they will stand up to stodgies and contributors, if that's what
they have, even though management may have an excellent point, that
true morality sounds a lot like Imus.

As French composers used to do when audiences jeered first performances
of their works, they played it again to make the point.

Audiences are not without resources though, and might begin whistling
along to the tune.

So it's hard to figure. Maybe the station's been sold. It has
a CP for 50kw.

>>
KOA Denver and whatever WMAQ, Chicago is now have top loaded towers. They were used in a number of installations to increase the effective height of the tower and lower the radiation angle.
>>

Right now, the only U.S. ND Class Is which employ top loading are:

660/880 (diplex), which is actually 880's tower; it is top loaded (Sect 1); A=125.90, B=29.47 on 660, A=167.80, B=39.30 on 880

(660 used to be DA-1 until someone crashed his airplane into that structure, which must have been about 750 feet tall, or well below pattern altitude)

680; A=99.50, B=0.00, C=D=136.83 (but this is a sectional (Sect 2) and the sectional info is missing; I estimate that the top loading of the top section is about 12.5 degrees, not zero degrees as described in the FCC data)

1020; A=115.40, B=9.90, C=D=264.20 (this is a sectional, too, but in this case the top loading is to the bottom section, not the top section)

Perhaps KOA's old radiator was top loaded.

KOA's current radiator is conventional (Sect 0) and is 207.80 degrees and is so much more efficient than its old radiator that KOA is required to dissipate excess power into a resistor in order to reduce overall efficiency to that of its old radiator

WMAQ's current radiator is also conventional, and is 185.50 degrees.

1655. Modern radio station's playback equipment

Newsgroup: rec.radio.broadcasting
Date: 2001-04-07 16:35:23 UTC
From: john Latala <jrlatala@golden.net>
Message-ID: <tcugebmtk239d2@corp.supernews.com>
Source record: 14816

What do modern radio stations use for playback equipment these days? Our local FM radio station set up a new website. One of the things on the site was a station tour where they took you from the receptionist's desk all the way through the station ... broadcast booths, production booths, news, etc,

In the image of the broadcast booth all they had there was a rather simple mixerwith a PC sitting next to it. The caption said all playback was controlled through the PC ... not a CD player or turntable in sight! :-)

How do modern DJs get their playlists together these days before the show and go through it during the show? Do they copy CDs to a disk farm for playback then delete the whole mess when they're done? One bigjukebox holding all their CDs hidden in the backroom and controlled from the PCs?

For that matter how many CDs does a modern radio station have on hand and available for play? How do they manage/track them?

The 04/06 edition of 20/20 had a ~7 minute feature story about Tom Silliman from ERI antennas. The story had some great video of Tom working at the very top of the Empire State Building. The story said that about 70 high tower workers die on the job each year.

There is also a short story about Tom with a photo of him on the Empire State Building master FM antenna in the 05/01 issue of Air & Space magazine.

1658. Suggestions to AFTRA about MO Senate Bill #555

Newsgroup: rec.radio.broadcasting
Date: 2001-04-07 16:35:27 UTC
From: wiseguy@mindless.com
Message-ID: <tcugefg3kqked7@corp.supernews.com>
Source record: 14822
Cross-posted to: alt.radio.broadcasting,alt.radio.broadcasting.open,rec.radio.broadcasting

A few weeks ago I accompanied AFTRA to Jefferson City (the MO state capitol) and addressed the Environment and Commerce Committee regarding the bill that would prohibit employers from including post-termination non-compete clauses in media contracts.

Of everyone involved in the process, I was the only one with ANY stake in the matter.

I felt that AFTRAs involvement in this was little more than apublicity stunt.

If in fact AFTRA is sincere in their efforts I would like to make some suggestions to improve
their chances.

1.) This is not the first time this bill has been introduced, yet NONE of the AFTRA representatives knew anything about previous efforts to pass the bill.

Who voted for it?
Who voted against it?
Who is on the same Committee from last year?

2.) Use the time and budget allocated to MOSB#555 for that purpose. When I arrived in the state capitol, I was offered a tour of the city where I used to live. Over dinner MOSB#555 was never discussed, but there was extensive discussion about upcoming contract negotiations. Thus we went to the Capitol with no "game plan".

3.) Know the basics, no-one with AFTRA could tell me how a bill becomes law in MO and how that differs from other states.

4.) AFTRA representatives repeatedly cited a similar bills success in the IL senate Maybe if the people working on the bill in MO contact the people having success with the similar bill in IL they could get some idea what they are doing right in IL and what is not being done right in MO.

At the end of the drama I asked if the same people would be working on the bill next year if/when it is re-introduced. The answer was probably not because everyone involved this year had their eye on a promotion. The people with AFTRA who worked on the bill last year were promoted, and did not pass any helpful information on to the next years crews.
First of all this illustrates that AFTRA did not send their "big guns" in.

Second the people they did send, had not done their homework, and seemed pretty indifferent to the cause. Their are many people who are in the same situation I was in yet AFTRAs primary concern seems to be lucrative contract negotiations for the big shots and not the injustices done to the little guys they claim to represent.

"It's A Beautiful Day For A Ball Game" - The Harry Simeone Songsters. It's on
"Baseball's Greatest Hits-Let's Play Part II" (Rhino). It's sort of hard to find, I
didn't
see it on CDNow or anywhere else, though...

Don't know about KOA, but WMAQ/WSCR doesn't have a top loaded tower. They did install a sectionalized and top loaded tower in 1935, but that tower collapsed sometime in the early 1950's, and was replaced by a plain vanilla tower, which I believe is taller than the 1935 tower, whose height had been restricted by the aviation authorities.

Is the station a "non-profit"? Just curious, because I'm sure getting the
I-man will reduce the need for personal contributions and there will be
plenty of advertisers willing to jump on that with both feet.

This is incorrect. The tower that KOA used from 1932 to 1959 may have been top loaded but the present tower is not. I have seen the WMAQ tower and I don't believe that it is either. Both are physically very tall and do not need electrical lengthening. The FCC data base also shows these as 'standard' towers.

There have been a number of licenses granted to communities that hardly existed. Back in the70's, one I recall was an AM granted on 1110 to a town outside of Roswell that had a population of 0 persons at the time. It had no Post Office.

The rule is: Sec. 73.1120 Station location.

(a) Each AM, FM and TV broadcast station will be licensed to the principal community or other political subdivision which it primarily serves. This principal community (city, town or other political subdivision) will be considered to be the geographical station location

Can anybody give me some sources / background infos on the web,
why radio authorities in the USA charge radiostations, when they are
broadcasting advertisements on the internet during their livestreams.

Due to this reason, some stations stopped live streaming on the net.

e.g. K-BIG 104 Glendale, CA
"Due to recent issues regarding additional fees for the playing of
radio commercials over the internet, we have been forced to
temporarily disabled our streaming of KBIG 104..."

That's WVEA-LP, a completely separate license for a low-power station. I
would presume the channel 36 facility is a "LPTV displacement", since
channels 60-69 are going away eventually.

A former coworker has taken a job at XM Satellite Radio. They hired some outfit to put "all" their music onto hard disk. That means many, many thousands of cuts. There is apparently some means of adding new material.

"It's a Beautiful Day for a Ball Game" was recorded by the Harry Simeone Chorale--the group that recorded the Christmas classic "The Little Drummer Boy." In checking amazon.com, the only CD currently available by the group is the Christmas album that contains "Little Drummer Boy." However, you never know what will pop up in used record stores or from collectors. (For all I know, somebody has an MP3 out there and Napster will hunt it down.)

The station has to know how to sell the show to advertisers. WTEM sells
F16 fighter ads and impotency aids, WRDW has seniors' advertising and the
jewelery holiday guilt market, WFAN has laser surgery and online trading...

Find a successful Imus affiliate with your format and find out who they
sell to, and do likewise.

It doesn't sell itself on ratings.

Imus himself is a non-profit corporation, with the various sick kids charities
that bore everybody, but it sets up other material.

If you appear interested in the Alger Hiss affair you can get the show at
a steep discount and become a ``very fine affiliate'' as well, and have
regular conversations with the I-man about what you think needs to be improved.

I don't think it's due to extra fees for playing commercials. It's due to extra fees for playing copyrighted music. The music performance rights societies (ASCAP, BMI and SESAC) successfully lobbied for a clause in U.S. copyright law that says that radio stations (or anyone else) who streams music on the internet, owes the copyright holder a fee.

Since most radio stations make no profit from broadcasting over the internet, it makes no sense for them to pay this fee. It would just increase their losses. So many have stopped streaming altogether.

Music radio stations already pay copyright fees to the societies for the music they broadcast over the air. Most stations can break even or make a profit while paying this fee, so they keep paying it (under protest).

Most "modern" radio stations today are using Hard Drive based music, the playlist is normally in the form of a LOG (derived from one of MANY scheduling programs) that is "imported" to the controlling PC which in turn finds the digital music file from one of the servers hard drives and plays it through a channel on the board. There are some (in my opinion) antiquated CD Jukebox systems where the PC actually loads a CD to the proper "drawer" to be played in the correct sequence. Most stations that "switch over" to a digital based system have their library "pre-loaded" when they purchase the system, but I have (3 times now..arrrrgghh) personally loaded all of the songs on the playlist onto the hard drive the "old fashioned" way, playing them through a board into the systems recording screen(s)...this is also how new additions are made to a "top 40" or "new music" station. As far as DJ's selecting their own playlists...well, I'd like to find a station that is still doing that...That, my friend, is a bygone era.

In the station that I work at... the program director makes daily playlists
himself and then is very picky about us following them. Not many DJ's pick
their own music any more to my knowledge.
Many stations use a system such as AudioVault or Prophet to store all music,
sweepers, spots, and promos. Some use the music on hard drive only for
automation and use CD's during the day. Where I work we have all music on
CD's and the spots, promos, and sweepers are run from the AudioVault 24/7.

> For that matter how many CDs does a modern radio station have on hand
> and available for play? How do they manage/track them?

As far as I know... that depends on the format. In the station that I work
at, CHR/Pop format, we keep around 500-600 songs at a time.. current and
recurrents. AC stations have much more than that, some of them even have
9am-5pm "no repeat workdays"
Hope this helps!

Speaking of "cities of license" I can't help but add this note. To my knowledge (I could be wrong) there are still two and only two stations operating with DUAL CITY licensing. They are (were):
KSTP-AM St. Paul/Minneapolis Mn.
WNSL-FM Laurel/Hattiesburg, Ms.

Good trivia question, anyway! I was a faithful listener to the former, and worked for the latter.

Imus was back the next morning. Management felt what with the new sports format (1270 the Team, there are no new ideas anywhere) that everybody would want to tune in not for Imus but for breathless interviews with the hot dog vendors.

I don't know the deal, but perhaps somebody suggested that the idea was moronic, sort of like snow closing announcements without the public service facade.

A couple of stations include Iron Mountain (Michigan) in their ID's but upon moving to the area and hooking up an antenna, "0" stations are available over-the-air.

The local cable company offers more than one option for most networks so as a paying advertiser there is no way to promise an audience in an area where the signal cannot be received------

Isn that mis-representing the facts a little??? (from an advertising point-of-view. Is the reason cities are mentioned is to give advertisers an idea what audience is served??)

You can thank Dale Bickel in the FM branch for that. He's been a real
go getter in getting useful things on the web.

Alas it doesn't appear that the AM branch or the video services division
have equivalent folk.

John,

The hottest trend in radio right now is Hard-Drive based audio. All songs / spots / jingles etc are stored on Hard-Drive and available for instant playback.

Many such systems accept pre-scheduled music and spot logs created by the Program Director and / or Traffic Manager.

As far as who rips (copies) the material to the hard drive? It can be any number of people from jocks to production personel. Usually whatever is ripped to the drive, remains there, since large capacity hard-drives (i.e. 40+ Gig) are so easily available these days.

>For that matter how many CDs does a modern radio station have on hand
>and available for play? How do they manage/track them?

It would vary from station to station. Many stations today subscribe to music supply companies such as TM Century or RPM, that provided music libraries. In said case, CD collections can be quite small to extremely large. It all depends on the format.

Where I work, we have the UDSII system fron On-Air-Digital. This is a computer that controls two Sony CDK-3600 CD Jukeboxes, and each box holds 360 discs. We're not even close to half full capacity on either of them. I'd guess they are both about 25% full.

We're exploring moving everything to hard drive though, as you might imagine.

Incidently, I'm running a consumer based version of this system at my apartment. It's called Wintrax, and is available through Wintek software in Ft. Worth, Texas.

It is a very good system and I use it to run my Internet-only station. It controls consumer based CD Jukeboxes from Sony and Pioneer. You can learn more about the program at www.cdcontrol.com.

It's a very stable system and could work well in low-budget stations such as college radio, etc.

The mailing address has nothing to do with the city of license. The city of license is specified in the station license. NCE FM stations must place a theoretical 60 dBu contour over a portion of their city of license. Commercial FM's must place a theoretical 70 dBu contour over the entire city of license.

In the commercial allocation scheme, during the rulemaking phase which allocates a channel to a particular community, you must show that the community of license is indeed a real community, and that there exists a geographical location that meets all of the required mileage separations (full spacing) to all existing allocations and assignments, and which can place a 70 dBu contour over the city of license.

At the construction permit phase, you must pick a location which meets all of the mileage separations in the short spacing chart, which provides contour protection to all other pertinent stations, as if they were operating at full facilities for class, and which will place a 70 dBu contour over the city of license.

I believe LPFM must meet the same rules as NCE as regards city of license.

One of the problems with using a significant length of guy wire for top loading in a guyed tower is that the vertical component of the current in the top loading is in opposition to the current in the tower, thus reducing the total current moment, and hence its "efficiency".

In the modeling I have done, in most situations I saw no improvement in the "efficiency" of an electrically short radiator by using guy wire capacitive loading. One of the reasons that top loading is specified for short towers is to raise the current loop in the tower, that is, more of the tower has more current in it, which would increase the total current moment and hence the "efficiency" of the tower. This just doesn't pan out with guy wire top loading.

What guy wire top loading CAN do for you is to raise the resistive component of the base impedance while reducing the reactive component. This helps in two ways, by raising the resistive component, the total current feeding the tower (and hence the current in the output arm of the matching network) will be lower for equivalent power. By lowering the reactance, the output arm of the matching network can use a smaller value inductor. Both of these work to lower the loss in the matching network by reducing the loss in the output arm and to some extent the shunt arm. Additionally, by increasing the base resistance, ground losses (which remain constant) become a smaller percentage of the base resistance.

By the way, I write the term "efficiency" in quotations, because the term, as traditionally used in broadcasting, does not mean the same thing as it is used in most other branches of engineering. It is a term of art. The actual efficiency of virtually all antenna radiators is very nearly 100%. As the term is used in broadcasting, it is roughly equivalent to antenna gain - specifically gain realized in the elevation pattern of the antenna.

By the way, KYUK in Bethel, and WCHV in Charlottesville both used guyed towers and have spoke type top hats. WCHV uses truss sections.

You can use ANY city in your ID as long as your city of license is first,
however the two I'm speaking about in the above post are ACTUALLY licensed
to two cities.

The legal ID at the top of the hour must include and only include the
city of license unless otherwise authorized by the Commish.

All other ideas can include virtually anything the station wants as long
as it doesn't constitute fraud.

welcome to radio in the 21st century. where I work, we recently
renovated, taking out our old DCS system, and installing scott studios
SS32 windows based system, and that's the ONLY thing in MCR, except
for a new 10 channel ward beck console. all your contest FX (on hot
keys) music, spots, etc, are on the scott system (using mp2, which
seems to be a broadcast standard) www.scottstudios.com for more
info, as they seem to be one of the leaders in b'cast radio
automation.

with the pirated music mp3 craze on the net the one which started
"ripping" music off CD's then converting to mp3's, this is now
mainstream with some automation systems, so you don't have to dub
music in realtime. and depending on what system you buy, you can have
a library installed with the system eithier for free or at a
additional cost. the days of carting music libraries or dumping in
music real time are going the way of the dinosaur.=20

PCs?

jukeboxes existed just before HD's became more reliable, and a station
a friend worked for told me their sony system was a bloody nightmare.
I only saw it once, but in these days, it's such a antique it's crazy
(and that was only 10 years ago). don't kid yourself though, there are
stations still running carts and CD's to air, it just keeps getting
smaller though, because the cost continues to get smaller for even a

decent low budget automation system. media touch's quicpix is only about $1000 plus the machine to run it. quite cheap looking at the fact that your station will run everything on it.=20

as for "playlists" the music log is usually done a day or so ahead of time, usually by a designated person, say the music director, or the like. there are various programs out there that actually pick the music (the MD just edits the log usally to make it time out right) one of the most popular is RCS's selector. often a paper log is printed out with a option for the jock to make changes if necessary, and note them, but that's often frowned upon, especially in canada, with the needed 35% canadian each hour, you can't mess with the balance., so unless you have a valid reason, a jock usually sticks to the log.

>For that matter how many CDs does a modern radio station have on hand >and available for play? How do they manage/track them?

that's a individual station thing. usually they would be locked up in the library, until needed, while one station I worked for still has them in MCR, in case the automation system goes down. in our case, we file them alphabetically by artist, with the rec company compilations files separate and chronologically by date of issue. we must have damn near 1000 or so on file (maybe more) but we just cleaned them out (and guess who took home about 300 dupes??? hehehehehehe) but I think it's safe to say any station these days usually locks them up so they don't "walkaway" with people.=20

BTW, as we did renovations, I grabbed a few nice "antiques" for my little home studio, including a actual turntable (technics SP15) a old ampex 351 clone (wish it was a real ampex....but still works good) and my fav a ITC 3D tripledecker (I started in this biz "plugging carts" as a overnight board op....was neat to get one) so I guess I can relive the earlier days again myself for fun....I suppose a lot of people would think i'm crazy...but hell, they also threw out maybe 200 carts, still playable...and some I don't have any other way .why waste em??? especially as I always had a thing for the format....

uh.....for anyone who forgets or doesn't know what a cart is, go to www.8trackheaven.com=20

and look for the broadcast cartridge display, I gave them a few pics a couple years back.=20

WLLH-AM is the only station in the U.S. that I know of that is authorized to run two transmitters on its primary frequency of 1400 AM. There is one in Lowell, and one in Lawrence, and the station is officially "WLLH = Lowell and Lawrence" .

A great many cities announce two or more cities in their ID - but they are doing what is called "rimshotting". During the 20s, 30s and 40s, right into the 60s, many of the cities around Boston (Haverhill, Lawrence, Framingham, Medford, Lowell, Lynn, Waltham) all were robust economic communities and as a result were granted their own radio station allocations. The area is largely now an amalgamation known as "the greater Boston area". Because the FM signals reach into Boston, they either masquerade as Boston stations, or operate actual Boston studios, even though their base of operation and city of license is elsewhere.

They still MUST identify once per hour with their call letters AND city of license, although they can add whatever they wish after that. In most cases, they must provide a minimum signal strength within their city of license, and finally, they absolutely MUST keep their public file within the city of license.

Thus you have stations id'ing as "Haverhill BOSTON!" or "Lawrence BOSTON!!!" or "Framingham-BOSTON" etc. Even WCCM(AM) - a 1000 watt station in Lawrence - (something like 80 watts at night) - id's as "Lawrence-Boston", even though its signal cannot get into Boston under many conditions.

The new material is added through the PC. CDs are "ripped" into the
system. Once they're on the hard drive cueing points are added and
levels normalized. All done through the CD-Rom on the PC. If there's
any editing to be don, that's done on the PC as well.

Ah, I knew there was a reason I got out of broadcasting 30 years ago. We have at least one station that is wholly automated (at least at times). I don't know what operating system they use in the things, but it wouldn't surprise me if it was Windows, given Windoes propensity of doing whatever it likes. I've called the station 3 or 4 different times - stuff going on in the background, skipping, whatever - and once someone actually answered and said they knew about it and were trying to correct it. That station has since made my killfile.

Something called a computer. I think our FM still has a backup
CD player and a backup cart machine.

> How do modern DJs get their playlists together these days before the show
> and go through it during the show?

It all comes upon the computer. No thought process is required.
Some jocks spend their 30 minute sweeps playing solitare somewhere
else on the computer.

My last full-time jock shift was 1978. We had no computers, no
liner cards. Today, I know jocks who can't do without either and
can't understand how I ever put a show together.

It's the Harry Simeon chorale (yeah, they did "Little Drummer Boy") and if it's still in print you'll find it on Rhino's "Baseball's Greatest Hits Volume II CD. Since WGN never played the entire song introducing Cubs games you'll discover that it's not a half-bad baseball ditty.

Geller Media International
Spring 2001 NEWSLETTER

Greetings!
And happy spring. I've just attended three radio conferences, so I am NOT going to the NAB in Las Vegas, but will be at the one in New Orleans in the fall.

And of course, we are having our own broadcast gathering...
Make your plans NOW to attend our 8th annual Geller Media International Producer's Workshop Here are some of the specifics:

DATE: Oct. 20th, Saturday, 2001
TIME: 8:30-AM- 4:30 PM
PLACE: NEW YORK CITY
Price US $189.
Includes Luncheon and- all registrants will receive a complimentary copy of THE POWERFUL RADIO WORKBOOK-The Prep, Performance & Post Production Planning

INVITED SPEAKERS INCLUDE:

* Dow Smith author THE PRODUCERS HANDBOOK-Tips for TV and Radio Producers "facing the blank page..."
Maureen Bulley The Radio Store- author :Write Good Copy Fast. Powerful Promos
David Lawerence (syndicated host/computer expert) Using the net for show prep.
Creating Powerful producers session (Valerie)
Howard Price Producer WABC-TV Eyewitness News New York "Tricks to get TV to cover us, and get publicity for what WE do!"
Lee Harris 1010 WINS/New York (News Anchor)
* Gary Del Abate (Howard Stern Producer)
If you are interested in attending the Producer's Workshop please contact us for a registration form at telephone 212-580-3385

WHAT MAKES A POWERFUL RADIO SHOW?
At a recent "consultant's roundtable" discussion at the Canadian Music Week conference in Toronto, several participants asked for a "criteria" list of what to look for in a successful show. At Geller Media Intl. we have a "checklist" that asks:

1) Is the show boring?
2) Is there a reason for a listener to listen to this show?
3) How have we entertained, informed and promoted on this show?
4) What truths have been revealed in today's show?

5) What was funny and why?
6) What was memorable?
7) Are you talking to the listener or to each other?

Another topic was Show Prep, finding compelling things to talk about on the radio is a constant process for producers and talent alike.
How do you pick a topic that will really work as a news feature or show prep story?

Although my belief is that there are NO BORING STORIES, only BORING STORY TELLERS, many talented people have a specific criteria.
Here then are some thoughts that may be useful to you from
Lisa Pollack: "A Pulitzer Prize winner's approach to story/topic selection"
From the Poynter Institute.

WHAT AM I LOOKING FOR IN STORIES?

1) Am I moved by it?
2) Can I describe the action that moves me?
3) Are there characters that people will care about?
4) Can I find an ideal subject, who wants to share the story?
5) Is the subject passionate?
6) Is there a beginning, a middle and an end to the story?
7) Does the story speak to me about being human?
8) Does the story offer me access?
9) Does the story have tension, conflict (humor)?
10) What details does the story offer?
11) What journey is being taken by the story?
12) Can I understand how the people involved perceive things?
13) Does it make me feel?
14) Does it surprise me?
15) Is it compelling?

Finding Stories off the News:
1) What is the story really about (do I care?)
2) Who has something at stake?
3) What are regular, ordinary people saying, doing?
4) What is really going on?
5) What is interesting about this?
6) What happens behind the scenes?
7) What is the surprise element?
8) What are the human elements in play (greed, love, jealousy, etc.)?
9) Do I think about this story when I am not "looking" for a story?

For more on the Show PREP,PERFORMANCE & POST PRODUCTION PLANNING, you can check out the POWERFUL RADIO WORKBOOK-- there's an excerpt on our web site at www.gellermedia.com. Also the first book: Creating Powerful Radio, Both books are avaliable from the web site or from M Street Publications at 800-248-4242

> Imus returns to LA on Apr 30 on KPLS 830. I hear this is a Catholic
> Family Radio station, and I am wondering: what's up?

What's up is that Catholic Family Radio as a national network does not exist any more and has not existed for several months. Their flagship station in Ann Arbor, Mich., WDEO, is still on the air, but is mostly airing EWTN programming. They've sold their Chicago station, WYPA, to Fred Eyechaner, who in turn LMAed the station to Sporting News Radio (formerly One-on-One Sports). The station's currently airing SNR full-time. Catholic Family Radio has sold almost all of its other stations, as well.

Finally, www.laradio.com says KPLS is for sale. Perhaps the sale went thorough and the site didn't know about it.

Greg Monti <vze292gh@verizon.net> wrote:

"The music performance rights societies (ASCAP, BMI and SESAC) successfully lobbied for a clause in U.S. copyright law that says that radio stations (or anyone else) who streams music on the internet, owes the copyright holder a fee."

That's not the only problem. Under the Digital Millennium Copyright Act, anybody who is offering a digital audio service that includes copyrighted sound recordings has to (A) pay royalties into a compulsory license fund -- to be distributed to the recordings' copyright holders, *not* the composers -- and (B) has to accept restrictions on their format designed to make it relatively difficult for listeners to record the songs they want from the digital service. If they don't accept these restrictions, they have to negotiate a license from the copyright holders for every recording they play. This won't apply to over-the-air digital radio (if and when that starts in the U.S.) but *does* apply to Internet streaming even of radio stations' regular services.

Public files may now be placed outside the COL but within the coverage area or at the main studio location even if that is not in the city-grade contour (such as is now common with simulcast and trimulcast class A FM's ringing large metros that are cropping up recently) . See the FCC site and the section of the rules dealing with location of Public Files.

To wit:
(b) Location of the file. The public inspection file shall be maintained at the main studio of the station. An applicant for a new station or change of community shall maintain its file at an accessible place in the proposed community of license or at its proposed main studio.
(c) Access to material in the file. (1) The file shall be available for public inspection at any time during regular business hours. All or part of the file may be maintained in a computer database, as long as a computer terminal is made available, at the location of the file, to members of the public who wish to review the file. Material in the public inspection file shall be made available

[[Page 319]]

for printing or machine reproduction upon request made in person. The applicant, permittee, or licensee may specify the location for printing or reproduction, require the requesting party to pay the reasonable cost thereof, and may require guarantee of payment in advance (e.g., by requiring a deposit, obtaining credit card information, or any other reasonable method). Requests for copies shall be fulfilled within a reasonable period of time, which generally should not exceed 7 days.
(2) The applicant, permittee, or licensee who maintains its main studio and public file outside its community of license shall:
(i) Make available to persons within its geographic service area, by mail upon telephone request, photocopies of documents in the file (see Sec. 73.3526(c)(1)), excluding the political file (see Sec. 73.3526(e)(6)), and the station shall pay postage;
(ii) Mail the most recent version of ``The Public and Broadcasting'' to any member of the public that requests a copy; and
(iii) Be prepared to assist members of the public in identifying the documents they may ask to be sent to them by mail, for example, by describing to the caller, if asked, the period covered by a particular report and the number of pages included in the report.

Note to paragraph (c)(2): For purposes of this section, geographic service area includes the area within the Grade B contour for TV, 1 mV/m contour for all FM station classes except .7 mV/m for Class B1 stations and .5 mV/m for Class B stations, and .5 mV/m contour for AM stations.

The latest from Folk Image, the Internet's D.J.'d Folk Music Audio Website
http://www.folkimage.com

Hi Everybody,

Here are the two newest features added to the Folk Image
web site over the past month:

On the most recent regular show, dated March 11, 2001, you'll experience the latest from Andy Irvine, John Trudell, the Battlefield Band, and Emer Kenny. We also enhance your "Celtic Aura" with some "Gypsy Soul." Regular Folk Image shows are 2 hours long and available on demand in the Windows Media format.
http://www.folkimage.com/01_0311.asx
http://www.folkimage.com/playlists/01_0311.html

On March 18 we caught up with emerging singer/ songwriter Alice Peacock after a cozy performance at Kiva House Concerts in Arlington, MA. In this 32 minute segment, she talks about her family's show business background, her relationship with Fleming/Tamulevich Artist Management, cowriting, the creative process, and the appearance of her Flash based website.

It's been well over a year and a half since we've featured an artist interview on Folk Image. Hopefully this will make up for some of that long gap.
http://www.folkimage.com/live.html
http://www.folkimage.com/01_0318ap.asx

FINALLY, we had some normal, pleasant spring weather here this past week, after yet another 8 inch dump during the last weekend in March. But even at this late date, a solid two-foot snow cover remains on my front yard, some of it dating back to early December. (Perhaps I'll be able to rake by... May?) Ah yes, and how can I forget coming back from THANKSGIVING to frozen pipes?

After this winter, I've gained a whole new perspective on why isolated, far northern societies are plagued by so much alcoholism and domestic turmoil. My conclusion: the human species was obviously designed to exist within a certain limited climatic range. Go outside of it, and the quality of life drops precipitously.

I hope the "seven month winter" has ended AT LAST!

Enjoy the music on me.

Were there any stations affected by the blackouts in California? At one time you could assume that every station had an emergency generator but it wouldn't surprise me if quite a few stations didn't.
Paul Oeser

"wallyw26" wallyw26@airmail.net asked ...

>>
PeterH and Grey, how about explaining what a top hat is and why is it necessary. I think it's used to increase the electrical height of a short tower, right?
>>

The current distribution in the vertical radiator is modified by the presence of the "hat".

This modification makes the radiator appear to electrically taller than its physical height.

There are different formulas required for calculating the vertical performance (as for skywave studies), and while the vertical field from a top loaded radiator is far from the ideal, theoretical vertical radiator, it is certainly adequate for the job.

And as the peformance of top loaded radiators can be predicted by an analytical model (and that's what Sect 1 means in he FCC files ... apply the generalized top-loaded mathematical model) it is therefore approved for use in DAs.

For reference:

Sect 0 - conventional vertical radiator with standard (idealized) current distribution

Sect 1 - generalized top loaded vertical radiator (one section only)

Sect 2 - generalized sectional radiator (two sections, with each section allowed to have top loading)

Other Sect codes apply to special radiators, such as "Franklin", "WHO Type", "WCCO Type" (never built), and a few others.

A top hat is anything which adds length in a horizontal or lower than horizontal plane at the very top of a vertical radiator.

A hat such as used at WNEW or KNBR are usually approximations of a round hat, but are often hexagonal ... certainly, it would be correct to call them regularly polygonal or n-gonal.

A hat as used by most stations which are not self-supporting are imply segments of guy wires which are not insulated from the tower, but are insulated a certain number of degrees (perhaps as much as 20 degrees) from the top.

KNBR is interesting because it is a sectional, has top loading of the top section, and is guyed. The hat is about 50 feet in mean diameter.

There are pics of KPO's CE and a colleague standing on the hat just after completion in 1949. That's 500 feet in the air, folks. Obviously, there must have been a thorf party up there to take the historic photo.

Imagine lugging a 4 by 5 Speed Graphic up a 500 foot tower.

KNBR was KNBC, which in turn was KPO.

>>
... Additionally, by increasing the base resistance, ground losses (which
remain constant) become a smaller percentage of the base resistance.
>>

This would be of significant benefit.

Although stations which have salt water grounds and which also employ top
loading wouldn't appear to benefit from this.

Or perhaps these stations selected top loading for one of the other benefits
mentioned.

>>
By the way, I write the term "efficiency" in quotations, because the term, as
traditionally used in broadcasting, does not mean the same thing as it is used
in most other branches of engineering. It is a term
of art.
>>

Indeed it is ... usually used as a reference efficiency by station class.

Class A minimum efficiency: 362.10 mV/m/kW at 1 km

Class B minimum efficiency: 281.63 mV/m/kW at 1 km

Class C minimum efficiency: 241.40 mV/m/kW at 1 km

That's the gist of it, yes. It's going to be a coil at the top of the tower, making the antenna overall what would be called a top-loaded groundplane antenna.

The root problem is that the wavelengths at MW are so bloody long, that a 1/4 wave antenna is just not practical in some enviroments. Using a loading coil will reduce the efficiency of the antenna overall, but it will allow a shorter antenna to be used with a given transmitter without running the risk of non-resonance and the resultant frying of the transmitter.

Source record: 14777

That is correct.

Top hats are used on electrically short towers to improve "efficiency". In the AM broadcast service an electrically short tower is one significantly shorter than 1/4 wavelength. AM station antennas must meet a minimum "efficiency" and when there are FAA or other constraints on how tall a tower can be, top hats are a method of compensating.

For a simple radiator, a top hat consists of conductors connected near the top of the tower and extending radially away from it. The top hat should be radially symmetric about the tower.

In a simple radiator, the current in the tower drops to zero at the top. For towers less than 5/8 wavelength the strength of the radiated field at the horizon is proportional to the current moment. The current moment for the tower as a whole is equal to a summation of the current moment of a whole series of small sections of the tower. The current moment of one of these sections is equal to the current in the section times the length of the section in electrical degrees.

Since the current near the top of the tower is rapidly approaching zero, the current moment in the sections near the top is also approaching zero, so they make little contribution to the field. An ideal antenna would have uniform current over its entire length.

With a top hat, the current at the top of the tower is not equal to zero, because the current continues to flow into (and out of) the top hat conductors. The current at the rim of the top hat is zero. Therefore, the sections of the tower near the top now contribute more to the field, and the efficiency of the antenna increases. The individual spokes in the top hat also radiate, but since the top hat is radially symmetric, the current in one spoke is moving in the opposite direction from the current in the opposite spoke, and there is no net radiation. (The radiation from each spoke is canceled by the radiation from the opposite spoke.)

As I alluded in my previous post, if the top hat is formed by connecting the upper portion of the guy wires to the top of the tower, then part of the current in the top hat is moving in the opposite direction as the current in the adjacent portion of the tower, and part of the radiation is canceled, thus negating the advantage of the top hat in increasing the total current moment of the tower.

I believe others have posted URL's leading to pictures of a variety of top hat structures.

Many stations now play their music entirely off of a computer system. But some use computer-controlled CD players, because once in a while you can hear the CD skip on the air.

But you still come across stations, especially small AM ones, that don't use any computer control for their music system. One tiny AM daytimer around here plays country music and they still play a decent amount of records on the air... from time to time the DJ mistakenly starts the record at the wrong speed, so it starts out too fast or too slow and then gets corrected after a couple seconds.

Unfortunately since I'm only in my 20s, I've never had the pleasure of hearing a late-night DJ fall asleep at the controls and leave a record clicking at the end-track for hours. With syndication and automation, there are only a handful of stations left that have real live late-night DJs, and the ones that do never play records on the air.

> e.g. K-BIG 104 Glendale, CA
> "Due to recent issues regarding additional fees for the playing of
> radio commercials over the internet, we have been forced to
> temporarily disabled our streaming of KBIG 104..."

Here's the story, as I understand it--most Los Angeles radio stations have cut off their streams for now because the American Federation of Television and Radio Artists, the union for radio and TV performers, has in its contracts a clause that if a radio commercial is webcast, the advertister must pay the perfomer 300% of their session fee. Due to this clause (which has been in contracts since the new contract for commercials started last October but wasn't noticed until recently), ad agencies and advertisers have been asking radio stations to block their spots on the webcast. Since it's easier to cut off the stream completely, that's what LA stations have been doing. You can get the information at Radio Business Report's site at www.rbr.com.

However, there are still many stations streaming here in the U.S.--there may be a dropoff because of some of the stream providers going out of business.

Ok, what if the area in question is not an incorporated "city?" The area I have in mind has about 2500 eager listeners, but is not incorporated. The residents get their mail from another post office located in a town some 15-20 miles away. There is no "city" or city government, just a county Sheriff. A 100 wattt LPFM station in this unincorporated community would never reach the outskirts of its post office address. So what COL do you file by?

Life is a little wierd inthe boonies...

Like so many stations they have the two channels out of phase. Thus
when heard in mono....any signal in the mix that was recorded in mono
(like a vocal or the bass) is cancelled. Heard in stereo, the sound
will be a tad bass shy but not too bad. Sloppy engineering. The cure
is to flip the pos/neg line on ONE of the channels and then all will be
well.
Call them and tell them!!!!!

Most network shows don't publish their affiliate lists but will be
happy to answer individual questions about where they can be heard. A
published list is a Godsend to a competitor who wants to work the list
to get competing shows on those stations.

I would contact Herb Squire at WQXR, New York. Herb has much of WOR's
historical material. WOR was one of the major flagships of Mutual
during that time. Herb is a great source of historical material.

There is no burden on an applicant for a station in the NCE band to show
that the community of license is indeed a bona fide community.
Rulemaking proceedings to allot commercial channels to communities must
show that a real community exists, though this need not be an
incorporated community.

I would select the name of an unincorporated area or former community
that is generally known in the area and which appears on the appropriate
USGS 7-1/2' quad map. Something like Chalk Hill, Texas, perhaps. (c:

Elderville and Easton also look like possibilities.

Another way of looking at this is, as the base resistance decreases, the current in the tower required to produce a given power increases. The ground resistance is in series with the current in the tower, so the power lost in the ground system increases as the square of the increase in base current.

This leads me to wonder whether WKBW had a backup gen, or if the local grid was still energized. I am too young to have witnessed the '65 blackout, (I was born in '70) but the topic has always been fascinating to me. BTW, I live in eastern NY.

Where did you go to college?

I worked at a small 5kw'er (AM) in Thibodaux, LA a couple of years ago, and we did satellite oldies, along with local news. They have one of the first iterations of Digilink, into which we programmed spots and PSA's. However, news actualities were recorded on cassette in the field and transferred to cart for playback. We still used CD's on occasion as well, and we also used a couple of 25 year old Revox reel to reels. If you look around, especially in the small rural and semi rural markets, you'll find some of this technology still in use and still doing the job.

Yes if the reversal has the DJ. The moron who used to own 99.1 here in the DFW area only had the output of his tape automation out of phase wen they first went on the air.. Took me weeks to finally get it thru his head what the problem was. He would listen in stereo and could not hear what was happening in mono! SO to him, there was no problem.

Well I can name two stations in the Louisville area with
unincorporated ``cities'' of license so I don't think that's too much
of an issue.

This is happening with several of the large radio groups nationwide, not just in LA.

The one interesting thing for the future will be to see if companies with ad-insertion technology will be able to pick up some of the slack. These technologies can let the stations delete the affected spots from their online streams.

In addition to this conflict with regard top the AFTRA contracts, there is also a concern by many stations that they will be charged high fees by music rights holders for streaming that music. No one's sure how high the fees will be, but they will be retroactive to, if I recall correctly, late 1998.

These two circumstances, plus the fact that most stations are not making any money from their web casts, in fact it's a net loss, is causing a lot of them to think about pulling the plug for good.

WABD-1370 and WCVQ-107.9 are both licensed to Fort Campbell, Kentucky - to my knowledge, there is no such city. The military base of that name, on the other hand, definitely exists! (though most of the population of that base are actually on the Tennessee side)

Both stations' studios are physically located in Clarksville, the fifth-largest city in Tennessee with over 103,000 population. Indeed, WCVQ is the *only* commercial FM located in Clarksville. (*NO* commercial FMs are actually licensed to Clarksville though 3 AMs and a non-commercial FM are)

1761. New STAGE LEFT episode on line: "God's Greatest Hits"

Newsgroup: rec.radio.broadcasting
Date: 2001-04-12 14:35:49 UTC
From: thedoge@swbell.net
Message-ID: <tdbfa57j46v3cb@corp.supernews.com>
Source record: 14730
Cross-posted to: rec.arts.theatre.musicals,rec.radio.broadcasting,rec.radio.noncomm,stl.general

STAGE LEFT is a weekly mix of music, comedy and spoken word
produced at KDHX-FM in St. Louis. Listen to it any time with
RealPlayer at http://www.stageleft.org or
http://www.kdhx.org/listen.htm and check out the play list at
http://www.stageleft.org/010411.html

The latest edition of the STAGE LEFT webcast went on line
today (April 11). This week the subject is "God's Greatest Hits".
Just in time for Easter, the show takes a look at religion on
stage, with music from "Godspell", "Les Miserables", "Fiddler on
the Roof", "Finian's Rainbow", "Two by Two" and many others.
We've also got performances by The Persuasions, Tom Lehrer
and Audra MacDonald. And, of course, news headlines
from The Onion.

You can also get both the current episode of STAGE LEFT and
previous weeks' shows at http://www.stageleft.org or
http://www.kdhx.org/listen.htm We'll be archiving a month's worth
of shows.

Next Week (4/18): "Bells Are Ringing" - a salute to the telephone.

1763. NPR/PRSS satellite feed location?

Newsgroup: rec.radio.broadcasting
Date: 2001-04-12 14:35:52 UTC
From: dsrekcc@prism.gatech.edu
Message-ID: <tdbfa83ir472ce@corp.supernews.com>
Source record: 14729
Cross-posted to: rec.radio.broadcasting,rec.video.satellite.tvro

Howdy -

I volunteer for a local community radio station. They've got a Comstream ABR700 receiver set up to pick up the NPR/PRSS feed. Unfortunately they never got around to using it -- long story. Well, now they're ready to use it and we find that the receiver is no longer locked to any carrier.

Has NPR/PRSS changed their feed parameters recently? By recently I mean in the past year.

Our satellite gear is set s follows:
- antenna pointed to 99W/261E, which I believe is Galaxy 4R
- downconverting at 3720 MHz (I assume to 70 MHz band)
- receiver says it is tuned to 72.7 MHz
- receiver displays "unusable" and "acquiring"

Are these numbers right for NPR/PRSS, or have they moved recently? I'm sure this was locked on at some point in the past, with the above settings. I'm pretty sure this is not a subscription issue, because if it was then the receiver would lock on but probably diplay something like "not enabled" or some such thing.

Any help is greatly appreciated.

I am living in Korea now, and the only English language programming we get is from Armed Forces Network- Korea. Trouble is, the local (Anjong-ri) affiliates, both AM and FM, seem to have an engineer that wouldn't know the difference between a feed and gerbil feed. The AM is grossly overmodulated, and the FM is out of phase, so that it cannot be listened to at all in mono, and sounds dull and hollow in stereo.

Being an engineer myself, it's difficult and irritating for me to listen to a station being so badly run. Is there anyone that knows who I can contact at Armed Forces Radio Network to try to get something done about this? As an additional gripe, they carry High Energy Rockin' Oldies at different times on the AM and FM stations, and they are only feeding the AM (mono) signal with one of the stereo channels, resulting in missing information in the signal.. seems like an engineer working for the govt. should know how to sum two channels of audio... :(

You're right, Miltie, but it was more of a money thing, according to my sources. Clear Channel did cancel Arbitron BUT it appears that Arbitron has cut the rates and CC will be back.

And, yes, Infinity's Mel Karamazin cancelled membershiip because NAB would not support higher caps on the number of radio and tv stations one entity can own.

Do you think Mel wants 'em all?

> half their power is wasted over the Pacific.

Not true of KFI whose transmitter site is well inland in Buena Park. KNX would probably benefit.
>>

It's La Mirada, not Buena Bark.

The site is so close to the ocean that you can see the tower from the shore. Just look down 91.

Not withstanding that, although there is very little land area between the tower and the shore, when you consider that KFI's night coverage area encompases a radius of about 1,000 miles, there is a substantial population between the tower and the shore.

The radiation is wasted as to coverage of land and sea area, but not wasted as to coverage of population.

Of course that population wasn't there 75 years ago (or whenever) when the site was constructed.

>>
KNX would probably benefit.
>>

KNX tried a DA, but it was unsuccessful.

The intention was to provide improved service to the Inland Empire, but the design probably increased high-angle radiation in that direction, not reducing it, thereby actually increasing local fading.

<<
I am curious about KOA since it would seem to be more reasonable to simply lower the power into the antenna.
>>

When KOA changed antennas in the late 50s, they became grandfathered at 362.10 mV/m/kW at 1 mile, which is the minimum efficiency for a Class A station.

The current 207 degree radiator's efficiency is about 410 or 425 mV/m/kW at 1 mile (can't remember which).

Therefore, to maintain the specified efficiency, the power should be reduced to roughly Class I-A, and it asked to be returned to that status, but the request was denied).

So, about 15,000 watts is dissipated in a resistor to compensate for the new radiator's higher efficiency.

Its in the license data.

You can calculate the precise power loss required from the difference in efficiencies of 1) the current radiator, and 2) the minimum efficiency radiator for the class.

Some Class As are grandfathered with exceptionally high efficiencies. WHO's special anti-fading radiator is so efficient, they get about 85,000 watts, effective, from 50,000 watts input.

Any radiator taller than about 165 degrees will likely produce more than 362.10 mV/m/kW at 1 mile, which is the minimum required efficiency.

Not withstanding that, the most popular height for ND Class Is in the U.S. is 195 degrees.

Unfortunately the RIAA has been sucked in by the hype of webcasting. I think the AFTRA issue is a different one.

I think a reasonable request by AFTRA for its members to be compensated for additional uses of their work will be acceptable to most broadcasters. Major markets are used to paying talent for specific uses.

The RIAA issue is much harder to overcome. It's the uncertainty of what the fees might be that's spooking any good businessperson. Why would you risk being charged crippling fees for something you make no profit on? The fact that the RIAA has a law giving them virtually unilimited control puts broadcaster/webcasters in the position of buying a product that'll be priced later. Once the product is used the price can be set anywhere the seller wants. That's not good business.

Would you buy a house, move in and let the seller determine the price later?

What about ASCAP and BMI fees? I thought the fees set by ASCAP/BMI were set relative to a station's format, revenue and market size (or some similar formula). Surely the extended exposure webcasting results in is NOT covered under existing ASCAP/BMI licenses...or is it?

Let's take the example of WRIF in Detroit.

Their morning drive-time trio of Drew, Mike, and Trudy DESTROY Howard Stern. Same general concept (shock jock), but with a definite local presence that people can relate to. Then again, I suspect the only places where Howard wins the group are places that either have weak locals ("The Morning Zoo") or other canned offerings (Madcow...etc)

The jocks are always doing appearances, and each has a distinct voice and schtick.

To me...THOSE are the hallmarks of a good station. Yes...the music and sound quality helps...but it's the people who make the difference.

1782. WBBR vs WTIC signal strength

Newsgroup: rec.radio.broadcasting
Date: 2001-04-13 13:36:58 UTC
From: Jim W <jwwNOSPAM@mags.net>
Message-ID: <tde07qc24hcpd1@corp.supernews.com>
Source record: 14742

I am located about midway between the WBBR New York and the WTIC Hartford transmitters.

The daytime transmission parameters are comparable, so you might expect the signal strengths should be comparable...but they are not. WBBR is definitely the stronger of the two in this location.

Both stations are 50 kw non-directional during the daytime hours. Same relative frequency location, with the edge going to WTIC at 1080 vs. WBBR at 1130.

A difference? WBBR's transmitter is located in the flat, moist, New Jersey meadow lands. The WTIC transmitter sits on a small mountain ridge west of Hartford.

I wonder how the signal strengths would compare if WTIC's towers were on a Connecticut River mudflat rather than a rocky New England mountain-top.

Dear Chuck:

In response to your inquiry, a "city" of license does not have to be an incorporated city at all. NCE WBJB is in Middletown, New Jersey. The COL is Lincroft. Lincroft is on unicorporated area (and a quaint little village near Red Bank) of Middletown Township. Lincroft is a Post Office. The College (the license holder) is located a mile from what is normally referred to as Lincroft. Taxes are paid to Middletown.

It's what I sometimes refer to the FCC's COL (computerized) dart board. It seems little towns with Post Offices (or Post Offices named after little towns) are an easy target to define as eligibility for stations when triangulating or dropping in stations that will be short spaced.

>My employer, Entercom, has also ceased streaming, hopefully temporarily.<

In my case, it really was temporary. We got our streaming in Boston back up Thursday evening around 7 PM EDT. We're using the Stream Audio encoder, version 2, that will delete commercials based on: 1) a special character inserted in the commercial title, 2) "cart" numbers, 3) all commercials or 4) no commercials. At present, it only works with about half a dozen major automation systems.

1789. EZ tapes

Newsgroup: rec.radio.broadcasting
Date: 2001-04-15 22:36:43 UTC
From: Steve <stevew625@nym.alias.net>
Message-ID: <tdk8jrfv3talfa@corp.supernews.com>
Source record: 14749

I found someone interested in the beta tapes of EZ music, the tapes are on their way to Murfreesboro, Tennesee. Actually, there were closer to 150 tapes. They are in 4 boxes. Again, I am happy that they are going to someone who can use them rather than the garbage. If you feel inclined, please make a donation to the Salvation Army or a similar charity. I got the boxes, etc. for free at work as they have a lot of extra ones they throw away.

The tapes have slightly more than 4 1/2 hours of music (sound only, no picture). There will be occasional sound dropouts in the first 15 minutes this must be something in the way they make the tapes there are defects in the beginning.

1-22 KMEZ Dallas, May 1988
100-135 KMEZ Dallas, Nov-Dec 1988 (shortly after they announced they were abandoning the format) A lot of the instrumental tracks have changed)
151-159 KMEZ (Mar 1989) (They kept the format but moved to a new frequency, 107.5. However, they started adding more vocals, the idea being they could transition to soft AC so slowly no one would notice, sort of like cutting off the puppy's tail an inch at a time. They never succeeded doing this, they transitioned to AC and never got much more than a 2 share then did a total format change)

200-245 KOOI Tyler-Longview TX 106.5 (1989) These were DX'ed from Dallas approx 100 miles and there are some reception problems Most of these are at night because the signal was stronger.

300-325 KOOI tapes in 1989-1990 closer to the station with good reception

KBRD1-5 From 103.7 KBRD Seattle-Tacoma in Sept 1990 shortly before they left the format and changed to KMTT. I also have about 10 cassettes (1 hr each side) with the same music if anyone else is interested email me, I will give them to you.

Also, I can send a few (about 4) CD's with MP3 format (2 tapes=9 hrs per CD at 160K), you would need a reasonably new computer and a program like Winamp 2.6 to play them.

Greetings All,
Since the WLFM Web Broadcast Feed is now up and running, listening online will become much easier. Now that there is a computer in the studio that has an active internet connection, I will now be able to take your requests online DURING the show! To make an online request for "Insanity on the Airwaves" during the show, you may use one of the following methods:

1) Via AOL Instant Messenger Screen Name KeeterMan27

2) Hop onto EFNet IRC and go to channel #weird-al and talk to KeeterDJ (me)

Once again, the address to tune in is:

http://www.lawrence.edu:8888/ramgen/encoder/wlfmradio.rm

There's a link to the net feed for WLFM on the "Insanity on the Airwaves" website at:

http://www.subtrivial.com/insanity/

I would encourage all of you that can to tune in. I checked out the feed myself and the sound quality is excellent.

Have a good day and I hope you will tune in to "Insanity on the Airwaves" and make requests!

Stay Demented,

Keith Rose aka Keeter Man
Host of "Insanity on the Airwaves"
Saturdays 6-7:30 PM Central Time
91.1 WLFM, Lawrence University, Appleton, WI
Net Feed: http://www.lawrence.edu:8888/ramgen/encoder/wlfmradio.rm

Living in a market with a Clear Channel station that is currently running their "$1000 an hour" contest, I began to wonder about exactly how it's done. They are running pretty clear disclaimers about the contest being national, 800# and all. I assume that the "call in now" announcement is made at the same time on all the stations participating in the contest, but how is it done from a technical standpoint? Do they just backtime from the specified time and then find the right length songs to get them there? Seems like it would be a headache to program.

[...]

IBOC (In-Band On-Channel) digital -- AM or FM -- is essentially a turkey, technically. It's inferior in almost every way to a dedicated digital system in a dedicated digital band.

The main reason IBOC is promoted is because a new dedicated digital band would level the playing field: the present 250-Watt AM daytimer, once ensconced in the new band, would have just as clear and clean a signal as the 50-Kw clear channel or the high-power FM -- just as good fidelity, the same coverage, and 24-hour operation. Just as your website is equally clear and accessible as NBC's.

A dedicated digital band might also be scalable and allow many more channels for the listener -- hundreds, thousands perhaps. Probably enough to allow public access (in which anyone can be a broadcaster for free or nearly free) on an even greater scale than does cable television.

And that would mean more competition for the big-money men.

And it would mean that competition would now be purely on the basis of programming, not the sheer signal superiority which the money-men have paid for.

They want to preserve the _inferiority_ of their smaller competitors. IBOC does that. They want to maintain the high economic hurdle to becoming a broadcaster. IBOC does that.

With all good wishes,

--

Kevin Alfred Strom.

ASCAP and BMI fees for music stations are based on a percentage of revenues. Within music formats, there is no distinction, in regards to cost, between one music format or another. Market size is, similarly, not a consideration. The payments are based on revenues, less certain deductions, times a percentage. On an average, a music station will pay about 2% of revenue to form music licensing.

Talk stations have other options which do cover incidental use of music, such as bumpers, licensed music used in commercials, etc. This comes out to be about 25% of the music station cost, on the average. There is also a way to use a hybrid of the two for stations that are talk in the daytime and might have a country music truckers'show at night.

Stations that webcast get an additional contract which has a small base fee and charges apercentage of web-generated revenue on top of that. These organizations treat streaming as a separate entity, not as an extension of the terrestrial radio station.

I work at a clear channel station, and I guess the reason why we had to shut down the 'Real Audio" part of our web site, is due to 'Real Audio' themselves. They want to charge C.C. double royalties, for the service and with a lawsuit pending Clear Channel ordered all real audio be dropped for the time being!

The path from you to the two transmitters matters a lot. I'd imagine
that granite is a factor between you and WTIC, but less so toward WBBR.
I just happen to have printed out the panes of the FCC ground
conductivity chart m3 <http://www.fcc.gov/mmb/asd/m3/42e.jpg> (and some
of those around 42e.) that cover your area. It's 2 From WTIC to about
the middle of New Haven County. Then 1 all the way to the end of the
spur of CT arounf Stamford, then 4 well beyond NYC. Depending on where
you are, that could pur a lot more "1" in your path to WTIC.

1807. Radio station public file

Maybe its time for the talent to unify a little bit.

Disgruntled broadcast employees should send their complaints to the offending stations public file.

Then perspective employees could read the public file the same way a perspective employer would check references.

From: Matt 'The Prod Man' Lane <proddude@hotmail.com>
Message-ID: <tdmhkh28akr54e@corp.supernews.com>
Source record: 14620

Some sad news:

Around 7:30 Central Time Easter Sunday, a tornado toppled the 328 self supporting tower of WGNS AM 1450 in Murfreesboro Tennessee. The tower had been a community landmark for 55 plus years.

At this time, WGNS "The Good Neighbor Station" is running on low power until a wire antenna can be assembled this week to get the station back to full power.

The station's LPTV channel 11 (WETV) was also knocked off the air as a result of the storm.

For more, visit the station's website at http://1450wgns.com. There are some photos of the tower damage there as well.

FMQB is a record tip sheet. The information is about third hand. The fact is that CCU did not cancel an existing contract. They are, simply, making use of the buying power of 1,100 stations to get a better deal or more options. They are doing this by stating that they are not renewing. Of course, we know that they will renew as soon as they get the deal they want and any enhancements they need. They have no alternative.

Here is Arbitron's press release:
Press Release
Arbitron Outlines Negotiations With Clear Channel Communications
Companies Negotiating Renewal of contracts in 130 markets
NEW YORK--(BUSINESS WIRE)--March 30, 2001-- Arbitron Inc. (NYSE: ARB - news) today announced that Clear Channel Radio signed a contract extension that provides the Winter 2001 survey, which delivers in the second quarter 2001, to their stations in 68 markets.

Arbitron also announced that it today received a letter from Clear Channel Radio in which the company states that it does not intend to subscribe to any future Arbitron ratings surveys in the 130 markets currently under negotiation. The letter goes on to state that the company looks forward to continued discussions with Arbitron.

Arbitron and Clear Channel Radio have been in negotiation throughout the fourth quarter of 2000 and the first quarter 2001 over ratings contracts that expired with the Fall 2000 survey for all Clear Channel radio stations in 99 markets and some of their radio stations in another 31 markets.

If an agreement is not reached, Arbitron's revenues for 2001 would be negatively affected by approximately $14 million.

About Clear Channel Radio Contracts with Arbitron:

Clear Channel is Arbitron's largest radio ratings subscriber and represented approximately 22% of Arbitron's revenue in 2000. Clear Channel Radio had Arbitron ratings subscriptions for their radio stations in 187 markets in 2000.

Ratings contracts for all of their stations in 99 markets and some of their stations in another 31 markets expired with the Fall 2000 Radio Market Report.

Clear Channel has ratings contracts with Arbitron that are still in effect in 88 markets. Clear Channel stations in 10 markets have contracts for radio ratings that continue through December 31, 2001. In 39 markets, contracts continue into or through 2002, in 28 markets into or through 2003, in 13 markets into or through 2004 and in four markets through 2005.

Delilah has been syndicated for several years now.

If you are traveling down to Atlantic City from Long Island, you can catch her on the Garden State Parkway at 92.7 WOBM-FM in Ocean County. (at the mile marker 92.7, also)

Surgeon General's Warning: Do not operate a motor vehicle while listening.

Someone asked why so many FM stations were NOT based in the major metro city that they claim to serve.

As far as the Boston area is concerned, most of the "rimshots" are licensed to cities of some substantial size. While spacing considerations were at play, a great many AM stations in Boston satellite cities (Lawrence, Lowell, Medford, Lynn, Framingham, etc.) applied for FM licenses at a time when no one had FM radios in their cars or homes. These stations simulcasted their AM sides, for the most part. A lot of those AMers sold off the FM side of the operation. Some (WHAV/WXRV in Haverhill) hung on long enough and dumped the *AM* side, and kept the FM station.

But that's another reason (besides spacing) that you see a lot of rimshotters today.

They don't have to have post offices. In Bakersfield there is a
station licensed to Greenacres, which is no longer even a "place name"
recognized by the Census, and has never had a post office.

The assignments are limited only by the creativity of those requesting
them.

Time for an open solution. Use Icecast on Linux. No licensing issues,
compatible witn more than one player (XMMS, WinAmp. MacAST, RealPlayer)
and possibly more reliable.

>offending stations public file.

The public file is intended to show how the station deals with the public, not to air it's internal dirty laundry. I don't think the FCC would require the station to include those kinds of comments in the public file. It's also not exactly the perfect way to ensure a promotion or even continued employment.

>Then perspective employees could read the public file the same way a
>perspective employer would check references.

If that's the case, the employer should be allowed to open the employee's file to the public so prospective employess would know just how stupid the employer was in hiring them. It's been my experience that disgruntled employees are always perfect and have been completely innocent victims of some terrible employer. It seems too one sided. If an employee includes a complaint about the employer, the employer ought to be able to make its side of the story public, too.

As it stands, an employer would be foolish to give a bad reference to a former employee. Even if the employee was always late, abused sick days, stole property and did a generally bad job. The legal department would have a fit if it found a General Manager badmouthing a former employee to a prosepctive employer, however true the comments might be. It's an invitation to a big, fat lawsuit.

Feel free to quote it; and thanks.

Your Congressman quip reminds me of what Lincoln's Secretary of War, Simon Cameron, said:

"An honest politician is one who, once he is bought, _stays_ bought."

And a friend of mine once observed that it isn't true that Congressmen would steal _anything_. Probably they wouldn't steal a red hot stove.

With all good wishes,

WCBN WILL DESTROY YOUR FEEBLE FORMATS

WCBN - Over 25 Years of Freeing Your Mind - Listen to us online!

WCBN is the University of Michigan student-run community freeform radio station in Ann Arbor, Michigan. We broadcast at 200 watts to the University and its surrounding communities from the basement of the Student Activities Building in downtown treetown. We have been broadcasting a genre-less overview of music, news, and public affairs for over 25 years.

WCBN's musical format is freeform, with some specialty shows. Freeform involves all different kinds of music, including jazz, reggae, blues, hip-hop, country, rock, and just about everything else under the sun. Instead of telling our DJs what to play, we allow them to select their own recordings from our vast and unique library. It is their responsibility to mix together many different kinds of music in an intelligent fashion, and show links between musical genres.

Click here to listen to our live WCBN-FM Ann Arbor RealAudio broadcast!

Well it has been a while since I posted to r-r-b, but there is something I wanted to get y'alls thoughts on on and that is multi market contest. I live between Columbia SC and Charlotte NC which gives me 11 CC owned stations to listen to (SIGH) I have no gripes with these kind of contest but I do have a gripe with they way they are done. Lets take WWMG in Charlotte. They are linked with the stations doing the 10 K a day give away. The way they are doing this contest makes my stomach churn. They can be in the middle of a song when BAM be caller so in so on our super duper hotline then when the promo is over pick back up in the middle of the song like nothing has happen. CC is not the only one doing this stupid practice. The Infinity owned stations in Charlotte are doing the same thing.... Does CC and Infinity think the listeners are that stupid. I worked in broadcasting for eight years and this has got to be the most crazy way of running contest I have ever seen. As Drew and me on amateur radio would say six years ago... "welcome to the exciting world of corporate radio"! What are y'alls opinions on this new practice of radio contest. Is it a healthy way to grab listeners or is it like with me "A BIG TURN OFF"!

Most Radio Stations don't even give legal ID on the top of the hour anymore, so why do you think they would actually put a negative letter in their public inspection file? They break the laws over the air and this is something even harder to prove.

My personal favorite is Copeland, Kansas. A tiny community, conveniently located right in the middle of the 3 principal cities in SW Kansas (Garden City, Dodge City, and Liberal.)

Copeland is unincorporated. Yet, it has no fewer than THREE Class C1 FMs AND a TV station licensed to it! All are commercial allocations.

On the CC station here, it's always just before the "song of the hour",
which is what made me wonder how they coordinate.

>away.

Clear Channel.

877-290-CASH for 10K a Day, 866-437-LOOT for hundred-thousand-dollar Thursdays (they're running these contests separately on separate stations in Cleveland).

866-EASY-WIN is Infinity's number.

>The way they are doing this contest makes my stomach churn. They
>can be in the middle of a song when BAM be caller so in so on our super
>duper hotline then when the promo is over pick back up in the middle of
>the song like nothing has happen. CC is not the only one doing this
>stupid practice.

They aren't interrupting songs here in Cleveland! WMVX is the CC outlet running 10K-A-Day. WKDD (another CC outlet) was doing a local contest and interrupting songs, but then they got smart... they are no longer interrupting songs.

>The Infinity owned stations in Charlotte are doing the
>same thing.... Does CC and Infinity think the listeners are that stupid.

Clear Channel has finally started to come clean about their multi-market contests. And they are doing what they should do: play it up as an ADVANTAGE. Here, the line is "More stations, more money". They are making it clear that you are competing with other people in other cities...

What gets me about Infinity is that they are running the 1K/hour promotion (10K/hour on Thursdays) on a bunch of radio stations in the same market! WZJM, WQAL and WNCX are all apparently running the exact same contest. Sure, I can do 10K a Day on WMVX or WZOO, but WZOO isn't a Cleveland station, it's an Ashtabula station, and you can't get it any further west than the suburb I live in in extreme northeast Cuyahoga County, with the exception of maybe two or three spots along the lake downtown. Sure, WAKS (another Clear Channel Cleveland station) is running the 10K/hour promotion, but it's being run as a separate contest, and only on THursdays, and WMVX is only doing the 1k/hour.

Personally, from a listener's point of view, I've given up. I have the Infinity toll-free contest number *and* the Clear Channel contest number on one-number speed dials on my cell phone, but even if I call just as the sounder starts, the line's busy. Seems like a bit of a scam to me, and I'd be curious to find out if they actually are giving away any cash.

Upon what do you base this assumption? At least three of the four big radio companies that have a choke-hold on Cleveland -- Infinity, Clear Channel and Radio One -- do the legal ID. I don't listen to Salem's stations much, so I can't comment about them.

Likely just about anyone in the industry who is reading here has
to empathise, Rich. I was quite fortunate to land a job 45 minutes
after the last time I was told by a GM my services were no longer
needed a few years ago.

There were other times I was unceremoniously punted out the door
when I honestly thought I would never work again. I'd never wish
that feeling on anyone. Considering the business, I'm sure that day
will come again, but the difference will be I've been around so long
now, I'll be going up against people more than half my age.

I'm glad to hear you're in the decision-mode, meaning you've got
some tangible options.

My personal favorite has always been the "Cypress Gardens" station.
Back in the early 70's, what is now WQTM (540 AM currently licensed to Pine
Hills, FL) was
WGTO and the city of license was Cypress Gardens.
The funny part is that there has never been a city or town or other
municipality called Cypress Gardens.
Cypress Gardens has always been a tourist park. Figure that one out...

I don't know. I've heard her rarely (from Bellingham) but have never
heard her talk about local events, local weather or give a time-check.
To me, if you don't talk local, you're network or you're syndicated.
One could opine you're also taking away jobs.. like entry-level ones
I had umpteen years ago.

> Seriously, this is national programming as it SHOULD be done! (And,
> God knows, I've done my fair share of the "Cryin', Lovin' or Leavin'"
> type call in shows back in the early 1990's...)

You have my deepest sympathies :)

When I was at CKO, somehow, things devolved upon me that when
we programmed out of Vancouver for Calgary and Edmonton on weekends,
I had our on-air people do weather, news and other "local" items for
those markets so it didn't sound like it was some generic station or
(worse) coming from another province. It worked pretty well; I doubt
too many Albertans listening could tell the cut-ins weren't local.
Mind you, considering the ratings, I don't think many were listening
to begin with.

Jim

I may be mistaken (I am more often than I'd like) but isn't, or wasn't there a post office or postal sub-station at Cypress Gardens?

Also, in Florida a great deal of the places are 'unincorporated' places. I lived in a place called East Lake Woodlands, which was part of an unincorporated area. Our postal address was Oldsmar (but we weren't in Oldsmar), but then changed over to Palm Harbor. My daughter went to a public school and part of its grounds, if I remember, were in Clearwater, and the rest in the area called Palm Harbor. Here in Massachusetts, probably every square inch of land is part of an incorporated city or town.

Does the term "strongarming" fit here? Clear Channel seems to want
EVERYTHING their way, thus making it easier for them to drive the few
remaining local O&O's into bankruptcy.

Why? They help the big groups to own every radio station on US soil, why not
the stupid TV stations too? Big frickin' deal!

>can't comment about them.

Depends on which companies and stations you talk about. Some stations seem proud of their call letters and give a clear and distinct ID within 2 minutes or so of the top of the hour. Other stations cram the ID into half a second buried in the middle of a stopset at 20 minutes before the hour, later to be followed by a r-e-a-l-l-y l-o-n-g sweeper (sans legal) at the actual top of the hour. This is a very clear violation of the law, yet nothing is done. Why? Because nobody gives a damn. I don't think is a bad idea at all to do what (some/all?) European stations do and have the 'legal' be a unique identifier. If they want to use the calls, fine. Otherwise, have the legal be "Noise 108.1 East Nowhere". (Yes, I know there can't be a 108.1, that was just an example.)

Oh, and lets fix the horrible COL rules while we're at it.

Oh Mr Bush! Can I be appointed chairman of the FCC?

NOPE!!! Only TWO stations KDGE 102.1 and one other have Fort Worth
AND Dallas as their city of License....all others have Dallas OR
Fort Worth alone....just because they ID as Dallas/Ft Worth does NOT
make FTW their city of license....Even KEGL 97.1 IDs are Fort Worth/
Dallas but our license says city of license is FORT WORTH only...

Chris
WB5ITT
Chief Engineer
KDMX / KEGL

If you want to find what stations have dual licenses, go to www.fcc.gov
and go to the Mass Media Bureau's Consolidated Data Base..
then go to City of License, put in Fort Worth or Dallas (or Arlington,
etc) and see how many have SINGLE COLs...then put Fort Worth-Dallas
as COL and you will only see two.

Here is this checklist as completed by 99% of radio "talents" today...

> 1) Is the show boring?

YES!

> 2) Is there a reason for a listener to listen to this show?

To find out if I'm late for work yet!

> 3) How have we entertained, informed and promoted on this show?

Acted like Howard Stern clones, laughed at our own jokes as if they were funny, read the weather once an hour, passed along a traffic situation ten minutes *after* it was cleared, played a song by the Backstreet Boys, insulted the audience, treated the callers like stupid morons and uploaded a ten second sound-bite promo to the Audiovault server to play this afternoon.

> 4) What truths have been revealed in today's show?

That the "talent" actually has no talent, is burned out from stress of living on minimum wage and is convinced he'll get promoted to PD any day now!

> 5) What was funny and why?

Just the fact that the station has secretly been sold to a major chain who will fire everyone next week, and they don't know it yet!

> 6) What was memorable?

Nothing, it's just show # 325

> 7) Are you talking to the listener or to each other?

Each other... we really don't have "listeners" per se, just a few people who tune in to find out what time it is and if it's going to rain. Then they put in a CD.

Welcome to radio in the new Millenium...

>
>Personally, from a listener's point of view, I've given up. I have the
>Infinity toll-free contest number *and* the Clear Channel contest number on
>one-number speed dials on my cell phone, but even if I call just as the
>sounder starts, the line's busy. Seems like a bit of a scam to me, and I'd
>be curious to find out if they actually are giving away any cash.

I'd guess that their timing isn't all that perfect and some cities get a 5 or 10 second headstart compared to your city (Cleveland). Try listening to syndicated programming on two stations or Don Imus on radio vs. Don Imus on MSNBC and you'll see that the broadcasts are a little out of step with each other. I just checked and Imus on TV is 7.5 seconds ahead of Imus on the local Washington DC station (WTNT or whatever they call it this week).

I wouldn't waste my time on a national call in contest. If I can't win a local station contest with 100 or 200 people calling, how in the world would I win a national contest with 50 times that many callers? I'll bet the age and speed of the local phone company switching equipment in your neighborhood would play a big role too.

It's not a new choice, but I have to mention WLNG in Sag Harbor, New York, the station that plays oldies that no other oldies station would touch, mixes in a few current songs (announced as "Number 25 on the WLNG Sound Survey"--where do you hear *that* nowadays outside of a countdown show?) and serves it all up with time tones, reverb, lots of old PAMS jingles resung by Ken R, lost pet reports, "Swap Shop," election coverage, local news bulletins and local newscasts every hour during the day--and in glorious mono, even if they are 92.1 FM. Listen to this wonderful anachronism at www.wlng.com. You'll need a RealPlayer.

STAGE LEFT is a weekly mix of music, comedy and spoken word produced at KDHX-FM in St. Louis. Listen to it any time with RealPlayer at http://www.stageleft.org or http://www.kdhx.org/listen.htm

The latest edition of the STAGE LEFT webcast went on line Wednesday (April 18). This week the subject is "Bells Are Ringing". With a tip of the hat to the current Broadway revival of the Jule Styne / Comedy and Green musical that give this episode its title, we take a look at the telephone as an inspiration for music and comedy. We've got music from the original cast recordings of "Bells Are Ringing", Bye Bye Birdie", "Cabaret", "No No Nanette" and others. We've also got performances by Al Jolson, Nichols and May and even Blondie.

You can also get both the current episode of STAGE LEFT and previous weeks' shows at http://www.stageleft.org or http://www.kdhx.org/listen.htm The play list is at http://www.stageleft.org/010418.html We'll be archiving a month's worth of shows.

Next Week (4/25): "On Broadway" - music from the current Broadwy shows "The Producers" and "The Seussical" as well as a new CD of show tunes from John McDaniel and a tribute to Shakespeare.

This is very strange. You must be listening to radio in some other country. I've rarely heard a station NOT give a legal ID in all the cities I've monitored. You have this gift of painting with such a broad brush everyone becomes a villain. It's a good thing our judicial system doesn't work that way or we'd all be in jail just because it's easier than trying to figure out who's really guilty.

The FCC considers the Public File to be one of the most serious issues a licensee faces. I regularly received legal memos from communications attorneys with dire warnings about keeping the Public File up to date with the specific information the FCC requires.

Every station I've worked for has kept a Public File that included everything required. In fact, with the advent of universally available Email, that gets included, too. Do you really think any FCC inspector is going to believe that a radio station never receives complaints? How could there possibly be a Public File without complaint letters?

Have you ever even visited a station? Or is all this just because no one plays your favorite music mix or talks about the topics you consider interesting? There are some very good broadcasters out there who care deeply about what they do. Maybe you should meet one before you pass judgement.

Personally, I don't listen to commercial radio stations anymore, why the hell would I want to listen to one on the net? A lot of people have stopped listening to radio due to the lack of decent programming. I believe most people really could care less if the stations stream or not because 90% of commercial radio stations are *useless* anymore. News and talk formats probably still maintain a decent listener base and TSL, but most music stations have become so pasteurized that they are pretty much ignored by many people.

My personal favorite has always been the "Cypress Gardens" station. Back in the early 70's, what is now WQTM (540 AM currently licensed to Pine Hills, FL) was WGTO and the city of license was Cypress Gardens. The funny part is that there has never been a city or town or other municipality called Cypress Gardens. Cypress Gardens has always been a tourist park. Figure that one out...
>>

Stations may be licensed to unincorporated cities or municipalities ... IOW, so called "common law" cities or municipalities.

Here's one to "go figure on" ...

WGTO was always 540, but it didn't originally have unlimited operation hours.

Whereas KNOE, located, in Louisana, about halfway from Cypress Gardens to the co-channel Class A station in San Luis Potosi (Mexico) did have (and still does have) unlimited operation hours.

Post "Rio", all the Mexican, Canadian and U.S. clears were broken down, so WGTO/WQTM added 50 kW nights.

The Cypress Gardens and Louisiana stations were on-air years and years before the SLP station was agreed to, by an amendment to th U.S.-Mexican broadcast treaty.

Err, on what basis to you make the legal ID claim? Over the past couple of days, I've listened through the top of the hour to WHO, KFAB, WOI, KRNT, WCCO, KSTP, WGN, WLS, and WBBM and hard as it might be to believe, every single one of the stations gave a legal top-of-the-hour ID. Now, I'm sure that here and there and now and then there are some stations that fail in the ID department, but MOST? I doubt it. I doubt it a lot.

Best.

I wish there were more shows like Delilah. She may be boring to some people, but to others she is a very good inspiration. In this day of voice tracking and it is 20 past the hour satellite automation it is refreshing to hear a very well produced show such as Delilah's. Like many have said it may be coming from the bird to over 300 stations, but you would never know it unless you have a good ear or somebodies ENCO craps out! It sure beats all those cryin' laughin' and lovin' clone shows that were popular not so long ago. JMO

Funny, about 98% of Americans listen to the radio, and they average about 21
hours a week doing it.

Where did you do your scientific survey?

This is not at all correct. The inventory and costs involved with carrying Delilah generally exceed the costs of doing local live programming. So, stations must be taking it for some other reason.

Hey, how about this one: A/C stations usually have trouble getting any audience at night. They are in-car and in-office stations, and do their thing by getting very big 10-3 numbers, average to fair drive time numbers and lousy evening numbers. Then we find a syndicated show that is consistent with he music base of our station, has enormous appeal to women and gets very long evening TSL. Since getting evening cume is really rough, it is all about TSL. Delilah does this, and does it without changing the overall image of the radio station.

This is not about cost. This is about turning a very hard to deal with daypart on A/C's into a strong share-getter. A really good evening show can add real numbers to the 6-Mid shares.

He's not 100% wrong. I don't know that I'd necessarily say "most", but certainly "many" stations don't give the legal ID on the top of the hour. They *do* give a legal ID, just not at the closest point to the hour permitted by program continuity.

It is VERY, VERY hard to argue that running the legal ID at :52, then running a series of spots and a slogan across the hour, complies with the legal ID regulations.

(I do think the legal ID regulations are obsolete and should be repealed, but as long as they're on the books...)

Reminds me of one I heard at an early 70's Billboard Convention (complete
with Claude Hall).

Big auditorium. Several famous jocks had their turn on the hot seat and to
answer audience questions.

Dan Ingram's turn.

Young man stands to the mike. Identifies as being with some or another
college station. He stammers as he speaks to the great one, "what is the
most important thing you have learned in your years of being on the air?"

Ingram: "How to take a 3-minute crap."

Yours is an exception to the rule.. most CHR stations run around 350 songs
TOPS!

> AC stations have much more than that, some of them even have
> 9am-5pm "no repeat workdays"

The average for an AC format is perhaps 500 to maybe 700 if it's a "more
variety" type station.

Libraries keep shrinking in size because of the "over-consultation" of
stations. It all has to do with how well songs "test" and how "familiar"
they are to listeners.

That's the reason why radio is so damn boring and stale now and why so many
people have stopped listening.

> cuts.

Wrong again.

XM has specifically stated that it will have longer playlists and more
variety than terrestrial radio. I'm guesssing the average channel will have
about 600 songs in rotation, maybe more. Times about 80 music channels, that
gives 48,000 songs. Add in artist specials, features, etc. and they will
probably have 100 thousand usable cuts.

That _is_ more than 400, isn't it?
>
> > There is apparently some means of adding new

> minutes.

Then you have to trim it and sometimes normalize it. Add a few more minutes
for labeling the cut and entering the data in the computer... overall,
probably 8 to 10 minutes form RIP to finished and identified computer file.

That's how it is now... cart machines and CD decks sit in the storage room
at most stations nowdays.

> How do modern DJs get their playlists together these days before the show
> and go through it during the show?

The Music Director makes up a playlist with Selector or comparable software,
generates a playlist for the day, week, etc., and uploads it to the system.
The music plays in that order, period. Generally, the talent has little or
no control over it for fear that the format will be "violated". For that
matter, most stations DO NOT take requests anymore for that same reason.

> Do they copy CDs to a disk farm for
> playback then delete the whole mess when they're done?

They're uploaded to a server, which holds all the digitized cuts, spots,
jingles, ID's. The PC in the studio is a WORKSTATION and simply downloads
the cuts as they're called for in the playlist.

>One bigjukebox
> holding all their CDs hidden in the backroom and controlled from the PCs?

That's hardly ever done anymore.

> For that matter how many CDs does a modern radio station have on hand
> and available for play?

In the studio?? NONE is the general rule. The average library of most music
stations consist of 300 to 500 cuts that are "consultant approved".

> How do they manage/track them?

Software does it all.

On top of that, most stations have the "talent" record all of his breaks and
liners as "voice tracks", which the computer plays in proper order. The
"talent" then does this on two or three other stations in the same building.
Therefore, the "cluster" of stations gets four shows on four stations from O
NE "talent". The days of a DJ sitting behind a console, selecting music and
pushing buttons during "live" shows is quickly going by the wayside in favor

of completely automated voice tracking.

A lot of stations simply get their music from a satellite service and just run a local liner as voice tracks before breaks to make it sound like it's a local program. No one is in the radio station "on the air" at all... often the engineer makes sure that the correct logs and playlists are online and that's about it.

Many talk stations run in this manner and the software switches between satellites for different programs and everything.

Transmitters are also logged and adjusted by the computers... even power changes! Many will even dial the engineer's pager if a reading is amiss or there is a problem.

You asked, and sadly I had to tell you, but that's how it is at the vast majority of radio stations nowdays.

Most systems I've encountered are DOS based, but a couple of the more
"flaky" ones do run under Windozze.

Heck... around the Detroit/Lansing /Flint/Saginaw area of Michigan, I listen
to ONE station and that's WWJ for news and traffic. The rest are so stale
and burned out I don't even bother... the same 400 songs over and over, four
minutes of commercials after every two songs played, lousy automation, moron
"talents" and distortion/overmodulation (thank you Mr Orban for your
"contribution" to radio) are the rule around here... there's really very
little reason to bother listening anymore.

There's a hard drive based program called OTSJuke DJ for $99 that runs circles around a lot of automation systems I've heard. I use it on my station. I'd run that before I'd mess with the hassles of CD changers.

This is mostly true... it's mainly the lack of personality that is causing
the rank programming on the dial today.

> >The typical radio station runs at most TWO MINUTES of DJ chatter per hour
> >outside drive time. How much personality do you need?

Depending WHO it is, two minutes might be TOO MUCH! For example, I simply
cannot stomach all of the "Howard Stern clones that act like God's gift to
radio. They make me sick! Why couldn't they clone someone that's
entertaining and personable, like Dam Ingram?? Noooo, they've got to clone
someone with questionable talent, weak "pipes" and a generally immoral
disposition.

> Let's take the example of WRIF in Detroit.
>
> Their morning drive-time trio of Drew, Mike, and Trudy DESTROY Howard
> Stern. Same general concept (shock jock), but with a definite local
> presence that people can relate to.

I personally don't care for the overall direction of the show, but I can
attest to the professionalism and presence. People don't have any doubt that
the show is LOCAL. They make a point of pushing that local element for all
it's got too, which I think adds fuel to the arguement against all these
"liner-drop" satellite stations.

> Then again, I suspect the only
> places where Howard wins the group are places that either have weak
> locals ("The Morning Zoo") or other canned offerings (Madcow...etc)

Or the bathroom at the local pub. You'd have to be totally lame, sitting in
dead air or broadcasting Jones straight off the bird to lose out to Stern.
From what I've gathered, he's only popular with demos like male 12-25.
There's many markets where his voice never has and never will grace the
airwaves. I personally think he's the greatest scourge in radio.

> The jocks are always doing appearances, and each has a distinct voice
> and schtick.

Yes, it's called "PROFESSIONAL"... They've been there for over 20 years. They are "old school" where you had to be personable, witty, charming and intelligent to put together a good show. How come the other stations in the market can't compete with them?? Simple...either they've got some 19 year old kid from Specs Howard doing his whole show on voice track, or they've got a "Stern clone" who is offending the core demographics or else their programming and overall quality is CRAP. When's the last time you've seen one of Jones' Networks "personalities" at a local remote?

>
> To me...THOSE are the hallmarks of a good station. Yes...the music and
> sound quality helps...but it's the people who make the difference.

You miss the point that for over twenty years, a listener who punches up 101.1 in Detroit *KNOWS* that *WRIF* is going to be there, playing *ROCK*... EVERY other station in the market (besides perhaps WOMC and WNIC) is a participating member of the "Call letter & Format Change of the Month club". The listeners don't know when the station they like is going to suddenly become a totally new entity that's playing a completely different musical format (yesterday, WWBR, Classic Rock, today "KISS" with Urban AC). They know if the punch up 950 AM that WWJ will be there with news and traffic and weather on the 8's... See the point? It has a lot to do with stability and tenure. Sure, formatics get tweaked now and then but the core stays the same. When you have stations flipping formats every 6 weeks, it tells the listener that someone there doesn't know what they're doing. It also tells them that the listener isn't important to that station. Look how many people got totally pissed off when classical music got yanked out of Detroit in favor of the Backstreet Boys! Tell me, what does THAT convey to the listener?

Imus has been gone from the Flint market for a couple of years. He didn't pull squat for numbers here. They replaced him with Daybreak USA, which has to be among the worst shows I've ever heard. It done them so much good, the station flipped from talk to a nostalgia format last fall.

But if he's gone from WXYT for good, it's probably for the same reason. Personally, I thought Imus' show was quite boring. He's nothing like he used to be on the old WNBC.

There is justice after all. For years Arbitron "strongarmed" stations
on rates and services. Now there's a company large enough to play the
same game.

Of course, your complaint wasn't with Arbitron. It was just another
opportunity to take a pot shot at Clear Channel.

> can't understand how I ever put a show together.

That's really sad... Up until I bailed out of radio a while back, we had ONLY carts and possibly vinyl or CD's, and we relied on pure TALENT, wit and intuition to put a show together. It took a keen sense of flow and timing and a good sense of humor to produce a decent show in those days... no wonder radio is lame now!

Also, back in those days, we had to backtime to hit live news and sports updates without cutting songs off early or sitting in dead air. A talented jock could backtime so tight as to have a song with a cold ending finish right at the mark.... other's couldn't do it to save their lives! I'd guess hardly anyone even HAS to backtime anymore, let alone know HOW it's done.

We'd have killed for stuff like digital editors and what not back in those days. Man, the potential of such technology! Radio should be more creative and entertaining then ever with this technology. Instead, it's generally just WASTED to automate and voice track generic bullshit. SAD!!!

And then there's WABD, Fort Campbell, KY. It's a commercial station,
but the "city of license" is an Army post! Studios and transmitter are
off-post, of course -- last time I was in that area, the studio/office
location was just across the highway from one of the entry gates.

> crumbs and such...

Possibly true, but at least radio still had to rely on talent for another ten years or so, at least as a whole... you've always had your elcheapo station owners who automated, even back in the 70's. Problem is, now 90% of them are automated to some extent, if not completely.

> Are there *any* stations left out there who don't have a sales

I'll have to agree 100% with that!

> In my area, there are (not counting public radio) currently 21
> stations. NONE are owned locally, and there are only 5 ownership
> umbrellas between the 21...

That's about the same as here... we have Citadel, Cume-u-less, Midwest and Regent owning all but 3 stations. Of those remaining 3, one is owned by U of M's Michigan Radio, and the other two are owned by churches.

In the surrounding markets, it's even worse! Wilks (the worst station-raping chain there is IMO), MacDonald, Clear Channel and Citadel pretty much own the market except for the 2 struggling AM's who've been begging ANYONE to buy them for five years! One of them is a 5kW Heritage station going back to the twenties. They've got a decent pattern, fairly updated facilities, decent transmitter and good airsound. The problem is they've been mismanaged right into the ground and I'm sure they've been fighting over whether they should hit the switch or not.

I recently found out that Clear Channel purchased 550 KFYR in Bismark, ND. That was what I considered to be one of the last remaining full service music AM's around. Man, that station has always been a blowtorch. I believe they're only 5kW but the 550 freq propogated like wildfire over the relatively flat terrain. I'd get them every now and then early in the morning here in Michigan if grey line was just right.

I've always been amazed at the coverage areas that stations in the lower AM channels could produce on 500 to 5000 watts. WTAC, Flint MI, 600kHz, 1kWDA, 500wDA nights used to blast a signal from north of Detroit all the way beyond the Macinaw Bridge, clear into Parts of Canada north of Lake Superior. They are WSNL now and their ground system is all messed up. They struggle to hit as far north as Gaylord, (115 Miles) even with a new Nautel PCM/C-QUAM transmitter and inproved processing.

Another one was WHND, 560, 1kW D, Monroe/Detroit... They used to be a TRUE 60's station with a library of over 7000 cuts or better. They blasted a nice pattern for a kilowatt. They played so many oldies that no one would touch, it was the only oldies station I can honestly say never got repetitious or stale. You could hear all the old stuff like "I Love You" by the Volumes, "When You Dance" by the Turbans, Smokey Joe's Cafe" by the Robins and "East Side Story" by Bob Seger and the Last Heard... stuff that would now send most oldies consultants to ER with a panic attack! Unfortunately, "Honey radio" has been gone for some years now but it's loss is still grieved by their loyal audience. It was an "oldies" station even back in the 70's. . They're WLLZ now IIRC, running barter and Religious programming . How depressing. Heh... WLLZ... what a disgrace to those legendary call letters...

Need I mention 630 CFCO??? I can hear them quite clearly 24/7 in Flint, which I'd guesstimate is some 175 miles or so to the northwest... They have a lot better oldies mix than the usual Neil Sedaka, Beach Boys and Turtles you hear played out on most oldies stations.

Don't blame Mr. Orban's excellent equipment.
It's the idiots who don't know how to use it.
Properly adjusted, it does what it's supposted to do when idiot air
talent pays no attention to levels.

Louisiana's main "big house", Angola Penitentiary, has its own FM radio station run by the inmates.

I don't think Angola is an incorporated town (the only business there is the prison, AFAIK).

I'll see your "today's bastard" and raise you two " preconsolidation
bastards."

There have been lots of flaky owners in the past. Ones that fired at will, gave no benefits, let the wife call in to kill songs, changed format because the guys at the Rotary did not like the current one... etc. It is not better or worse now, just different. At least many of us have retirement plans, real medical insurance and a few other thing that the little operators never gave. Oh, forgot to mention... it's been years since my paycheck bounced, too.

Thought I'd share my two cents- I agree with Johnny Neutron about the wit and talent that it took (and should still take) to put together a fresh and entertaining airshift. However, I think that many of us miss the point when we go about criticizing the storage media so much. It was indeed tough when air talent had to time things perfectly, and that did take a lot of skill. I don't think that sort of thing is the most important element though. Because the computer can time these things out for us, I consider it a valuable tool. What contributes to the overall sound of the show is the inportant thing. If a talent has the qualities that Johnny (and I) agree that they should have- wit, spark, etc., I don't think it matters that the technology exists to make the mechanics of the show easier.

Respectfully, Johnny, I think it's a little misdirected when we question the talent of people because they use technology that does a lot of the gruntwork (like backtiming) and helps the shift flow better. However (and this is a big however)- I totally agree that much of the live assist technology has misled radio suits to believe that they can hire cheap, talentless people to run airshifts simply because they don't need to know how to do stuff that we used to have to do (like tape editing, say). That is the true shame in all of this. I don't fault people who use the modern tools available, I fault those who think that the tools are the heart of the show, not the talent, and hire less than the best because control rooms are easier to navigate and shows are easier to put together.

I think what may be more of an issue is stations incorrectly identifying themselves. I do hear that every once in a while. City of License before calls, station monicker between calls and city, etc. It's possible, however, that I'm unaware of relaxed rules.

Please feel free to educate me. Someone told me that it's legal to state the frequency in between calls and city. Is this true?

Where did you get that idea? WTAC was a hard catch beyond Houghton Lake. I worked summers several years at WCCW in Traverse City, and the only station form that area with any kind of usable signal in the daytime was the old CHR format on 1210... WKNX, I believe, form the Bay City/Saginaw area. Nothing from Flint made it. WLS could be heard days outside of the city. Nights the dial was lit up from all over, with KSJB in Jamestown dominant on 600, not WTAC. It sure did not have a signal up around Alpena or Petoskey or Cheboygan. That area has awful ground conductivity and the local stations don't go for more than a few miles daytime.

I have heard of OTSJuke but I haven't looked into it yet. Does it allow crossfading of songs? All the Hard Drive based systems I have heard of so far, require at least 2 sound cards to make that work (although I understand Scott Studios has a system that will work w/ only one sound card).

The thing you're forgetting though is cost... Most of the really good Hard Drive based systems I have heard of will set you back anywhere from $3,000 - $16,000!

I got the Wintrax program and the CD changers for less than $3,000.

Most CHR's have about 100 songs or they are not CHR. Remember, these
stations used to be called "Top 40" because they played exactly 40 songs.

The first Top 40 I worked for back in 1963 did not let the jocks add to or
change the music. Where is this a "recent" change?

I've never seen anyone take a "real" request for a song that was not already
authorized for at least 3 decades.

It has nothing to do with consultants. It has to do with how many songs, out
of all that area remotely fitting the format, the average listener cares to
hear. Generally, after you pass 300, adding more songs will simply mean
adding songs that a lot of your listeners don't care for and will cause
those listeners to go elsewhere.

Why would you want to play bad music?

>
> That's the reason why radio is so damn boring and stale now and why so
many
> people have stopped listening.

They have? Actually, they have not, although new channels of distribution
are certainly a concern. About 98% of Americans cume radio weekly and they
listen as much as they did 50 years ago.

>It's possible, however, that I'm unaware of relaxed rules.

No IDs, incorrect IDs, misleading IDs (where the COL is buried in the :50 stopset, one channel deliberately out-of-phase, etc.) are all common these days. The rules haven't been enforced, but enforcement has.

Here in Orlando, we have at least 5 unlicensed FM stations, broadcasting on a regular basis. One of these ("95 Live") runs high power from a professionally-engineered antenna system and boasts a signal that covers most of metro Orlando. They run a full slate of commercial advertisements for a growing list of regular sponsors. Profanity (uncensored rap music and listener phone-ins) are aired regularly.

Recently, they changed frequencies from 95.9 > 93.9. Their operations on the new frequency cause severe interference to two licensed broadcasters on first-adjacent channels. This station has been in operation for nearly two years, and their location is well-known. Yet, the FCC does nothing to stop their illegal broadcasts.

Enforcement? What a joke!

News Release

Internet only radio station 3DSJ.com moves up in the programming line up today on Tampa Bay radio station WTAN, 1340 AM, Clearwater. 3DSJ.com began broadcasting "The All Request Party" on Saturday evenings earlier this month on WTAN. Bill Elliott, 3DSJ.com President & CEO and host of the show said "We are very pleased by the decision made by WTAN President Dave Wagenvoord to move the program into a key time slot at 2 PM when the WTAN signal is at its peak and free of nighttime interference. This will give us the opportunity to penetrate and serve this important market and to promote our worldwide internet service." Today's date coincides with the official kickoff of the 3DSJ Radio Network offering 24/7 programming on a market exclusive basis to radio stations worldwide.

Bill Elliott can be reached at 813 - 920 -7102

Oh, I wish I could find the article someone wrote in the group a few years ago about that topic.

As I recall it was a light ACish station, and when the talent needed to take a bathroom break, he put on Hey Jude. In the story, the station was being run out of a trailer and the bathroom was a porta-potty outside. In the middle of the business, the record (remember them?) started to skip. So the talent rocked the john so it hit the trailer, which knocked the tonearm into the middle of the single version of Revolution. Not quite on the playlist...

Apologies if this recount is faulty, but that's how I recall it. :)

I've been messing around with a cheap system called Web Jockey which sells for $99.00 from LPB. If you set it up right and trim your music files so there isn't any dead air in the file, it will do a nice cross fade using a single sound card. It would be more than adequate for colege radio automation, music on hold, or just for playing your favorite old songs (Which is what I do with it.) The downside of this particular program is it is not time sensitive and does not use hourly "clocks." For commercial purposes where somebody would like to have an event run at a specific time, it is not suitable. I'm told the next version will fix this problem. If that happens, I'd give it good marks.

It does have a "manual" and a "live assist" mode whjich makes it pretty handy for some other audio purposes outside of the broadcast world.

OTS Juke allows 5 overlapping audio sources with a standard SoundBlaster
Live card.
I have the demo version it does allow cross fades etc.

Hi:

Take a look at the OTJuke site. You might find it interesting and a workable solution to your needs.

Price right now is $99 and for getting your feet wet in digital storage and basic scheduling of events, it is a good little program.

It is mostly a dance/DJ program, but is in use by several stations. The mixing between songs is superb for the money.

Neat trick if you can do it...especially since "Hey Jude" and "Revolution" were on opposite sides of the record...both the 45 and the LP.

I'm basically your garden variety radio groupie who somehow manages to get
paid for being inside a station. Equivalent of being a test mechanic for an
amusement park.

Having started as a DXer helps... you build up an incredible library of
useless radio trivia through that pursuit, even if the hours suck.

When at WCCW, I spun the records and signed the logs for the Spanish show
from sign-on to 6:30 AM in the Summer. There was a guy who wandered around
the country with a box of records, doing Spanish shows for the migrant
workers as they moved around the country. Of course, WCCW stands for "Cherry
Capital of the World" and the Spanish show was for the cherry pickers. The
on-air guy was probably undocumented so he did not even have a 3rd ticket.

I fount out that is KYEZ in Williams, Arizona, and the city council there is ordering the station off the air. How can anybody, other than the FCC, order a station off the air. KYEZ is being told to quit broadcasting at midnight, local time, on April 30, by the city council.
In my opinion, I think the city of Williams, Arizona, is overstepping its bounds by ordering KYEZ to cease broadcasting on April 30. Unless they have an FCC order, I dont see how a city can order a radio station off the air.

KEYI "Oldies 103" Austin TX (actually San Marcos(sp)) moved into new studios this past week. And their audio sounds better in mono (haven't set up my stereo yet, I just moved too). No more nearly cancelled sound late at night. I can understand them not worrying about the bad mono sound before they moved, I wouldn't have either. I'd be busy with getting the new studio set up too.

The people who seem to do the most backtiming today are public radio producers, especially on the NPR flagships "Morning Edition" and "All Things Considered." Just about every cut that's used as a bridge out of stories is backtimed and ends right before the break. Which is one of the reasons why the NPR morning and afternoon drive shows sound so damn good, even if you have qualms about the alleged political bias of the shows (and if both the far left and the far right hate NPR, they must be doing something right...)

Had to respond because you mentioned the amazing Dan Ingram. When he was hot (and he's still one of the greats - don't get me wrong) ... when he did afternoons at WABC he was the best there was. Period. Wit, personality, fun, amazing attitude, and such exquisite timing! Thanks for mentioning an icon. Radio sucks these days because no one is getting the chance to develope and, maybe, be another Ingram some day. Most announcers that are allowed to talk are grasping n gasping and have no clue. Yuk.

Most if not all of these are AM stations. Try listening to the FM band with a current hits music format. THOSE are the stations that do not comply, not the AM stations who have call letters they are proud of. (note how many three letter call sign stations you chose to list!)

Try listening nationwide to your "kiss-fm" formats or stations owned by clear channel, and the other two companies. MUSIC FORMATS not talk stations. And not classical or country either!

Forgive me if I've told this one before, but in the early 1970's while
I was working at what then was WKAL AM/FM in Rome, NY, a parasite
called giardia got into the city water supply. Net result--everyone
in town had the runs, for days.

Since everyone had it, there was no point calling in sick, so we all
just went to work our regular shifts, but had to run to the crapper
about three or four times an hour.

Listeners heard LOTS and LOTS of Elton John, along with Hey Jude,
MacArthur Park, and American Pie repeated over and over, during that
week.

WCBN WILL DESTROY YOUR FEEBLE FORMATS

WCBN - Over 25 Years of Freeing Your Mind - Listen to us online!

WCBN is the University of Michigan student-run community freeform radio station in Ann Arbor, Michigan. We broadcast at 200 watts to the University and its surrounding communities from the basement of the Student Activities Building in downtown treetown. We have been broadcasting a genre-less overview of music, news, and public affairs for over 25 years.

WCBN's musical format is freeform, with some specialty shows. Freeform involves all different kinds of music, including jazz, reggae, blues, hip-hop, country, rock, and just about everything else under the sun. Instead of telling our DJs what to play, we allow them to select their own recordings from our vast and unique library. It is their responsibility to mix together many different kinds of music in an intelligent fashion, and show links between musical genres.

Click here to listen to our live WCBN-FM Ann Arbor RealAudio broadcast!

It's not legal if you can't understand the ID. Not being on the top of the hour (when they always have time to play their non legal jingle) is just ONE part of not being legal, but playing it under much louder phaser effects at a super fast unintelligible speed is also not legal.

>

I realized this was an interesting point and started thinking of what radio was like when I was more of a groupie than an actual radio person. Here is a snapshot of the market I got started in in 1959:

Cleveland, Ohio. The major stations in the 60's (All AM, of course) were:

WJW 850 - Storer Broadcasting. Not local
WKYC/KYW 1100 - Westinghouse. Not Local
WGAR 1220 - Nationwide. Not local.
WDOK/WIXY 1260 - WDOK was local, but WIXY part of a group from the 60's on... group was local, but, a group.
WERE 1300 Local. Bad signal in suburbs.
WHK 1420 Metromedia. Not local.
WJMO 1490 UBC. Not local.
WABQ 1540. Local daytimer.

So, the better signals were owned by outside companies even 40 years ago. The only local signals in the early to mid 60's were a daytimer and a highly directional AM that did not hit the eastern suburbs, plus a batch of FMs that were either ethnic or unable to pay the bills.

We don't have much difference today, as the only locally owned stations in most major and medium markets are daytimers or rimshots or noncompetitive stations of some other kind.

The other criticism that is very common here is that of automation and lack of opportunity. Without covering all the points I _ could_ make I do want to mention a couple:

First:
I started seeing automation in the late 60's. It was used then as a way of making a profit at FMs which, in the greater part, were losers. Automation allowed soft pop and beautiful music and things like Hit Parade (Drake Chenault) to work in many markets and was part of the first growth spurt of FMs. Automation is not inherently bad, it just depends on the way it is used. Just as an Optimod does not inherently destroy the audio, but can if improperly adjusted.

The same goes for other technical advancements, ranging from digital workstations to automated transmitter control. One recent post lamented the loss of skills like back timing and such... yet we now have a whole range of tools that make this sort of thing obsolete. The net feed can be run to a hard disk and played when the song ends, even while the feed is still recording. No need to play those 1:50 stiffs or crummy instrumentals that we all had to pad to the net. There is nothing venerable about a cart machine, a reel recorder or a razor blade and an editing block.

Second
20 years ago and earlier, many of us started in radio as gophers, running coffee and organizing the LP library and taping feeds and such. Today, labor laws and liability considerations have pretty much eliminated the chances for a kid to hang at a radio station and learn in an apprenticeship program. Most of us go through considerable efforts to find part timers and talent for the less important shifts because there are very few people coming into the business but not all of that is the fault of syndicated programming or voice tracking. In fact, in many cases, these systems were invented to compensate for the inability to find people. The cost savings are not so great as to automatically force automation; in fact, in many cases a decision to automate has more to do with availability and reliability of people.

Another fact that is all too often overlooked is that there are more than double the number of stations there were in 1960. Indexed against cost of living and inflation, there is not enough more ad revenue available now than there was "back then" to fully support big radio operations with full news staffs and such. A great deal of the change in radio has to do with economics of the market in terms of number of stations and competitive media.

Going back to my original reference to Cleveland, BIA now says that there are 32 signals licensed to the MSA. In 1965, there were perhaps 6 or 7significant players. Now there are 4 to 5 times that number. Even if many of these stations are voice tracked or automated in some dayparts, there are still lots more programming jobs available than there were 35 years ago.

Some of the complaints posted here come from outsiders, folks who like radio but don't work in the biz. I hope this post gives some "perspective without the invective" on what is going on. Other posts come form "wannabees" who can't get in the door; to those I can only say that whining will not change radio so you should look for a more positive approach or learn a skill that will make you valuable. Finally, there are some old hands who seem to be stuck in the past. Rather than being like some RPG 2 programmers I have met, don't complain so much about how it was as we are not going back. Instead, either move to a new area of on-air or programming or try sales or some other related trade.

Before closing, I'll address what I'm sure will be several "bad excuses, David, to cover up the fact that the internet and XM/Sirius are going to eat your lunch." Remember, radio was written off when TV cam on the scene. It was put in question when color TV got critical mass. AM was written off when FM bloomed in the 70's. It was discounted when VHS and cable and satellite

TV appeared. And certainly the net and microprocessor powered devices will threaten it again even as they are doing now. I just have more faith in the ability of the marketplace to bring about change. And it will.

This may not have been common in the US, even in the troubled times of the 60's and 70's...

When I was in Ecuador, each station I owned had a song to be played in an emergency. This meant, in the event of a guerilla attack or occupation of the station. As we suspected that the guerillas, if they showed up, would take over one station, not all 6 at the same time, we figured that the announcers could easily play a song that would alert station staffers not in the building to the situation.

Never had to do it, as the measure was taken after the first guerilla take-over and they never, thankfully, returned.

Yep.

KLSP , 91.7. 105 watts. Antenna 16 feet HAAT.

Licensee is the Angola Educational Foundation.
Station address is Lousiana State Prison, Angola, LA.

I did see one of those shows on History channel, or A&E or one of those, where they did a documentary on
Angola Penitentiary, and it showed the radio station in action.

What was also interesting is that most of the inmates have GE Super Radios - the inexpensive choice of
AM-DXers. With all of the steel, etc., you would need one of those to get anything deep in the walls of a
prison building.

Hold on. I worked at some "top 40" stations in the late 70's and a country top 40 station in the early 80's. Most had 10-15 songs in "hot" rotation - repeated once every 2 hours or so, the rest of the top 40 rotated about once every 4 hours. But, they all mixed in several "recurrents" per hour, -- songs 9-12 months old that had fallen from the top 40. Most even had 1 or 2 oldies per hour in addition to 1 or more "new" songs from the Billboard or R&R top 100.
WLS and CKLW, perhaps the most famous top 40 stations of their day had formats similar to this. In spite of the heavy rotation of the "top 40" songs, the recurrents and occasional oldies still made for more variety than today's over-consulted oldies stations that have a potential playlist of thousands of songs.
Oldies consultants: I can see the need for a song's familiarity factor when making a playlist, but geez, once or twice an hour, let the stations sneak in something different!

Let's see...(1) there is no KYEZ in Williams; KYEZ is in Salina Kansas;
the station you're referring to is probably KYET; (2) KYET is not a
country station; (3) a search of the Arizona Sun, the nearest daily
newspaper to Williams, shows absolutely *no* mention of the Williams City
Council taking any kind of action against KYET. My search went back to
January 1. One would think that if such an event were to occur, it is so
rare that it would be covered in the local press, not just in one but in
several articles.

So, what's your source that KYEZ, a country station in Salina Kansas is
going to be shut down by the Williams Arizona city council? Or that *any*
station is being shut down by that city council?

You are skipping the early days of McLendon, Storz, Bartell, Plough,
Crowell-Collier and others. In the 50's and 60's, a top 40 had 40 songs,
give or take. Even the early FM top 40's had around 880 to 100 songs; I did
what was the 5th or 6th such station in Birmingham in early 1972 (right
after WMYQ, WDRQ and KSLQ went on) and we used around 60 tunes in rotation.

Some stations that used oldies, like Drake in the mid to late 60's,
controlled these very carefully and they were definitely flavor elements.
Mike Joseph's Hot Hits in the 70's and 80's was similarly tight; while it
varied by market, the #1 song usually spun every 90 minutes, the next couple
every 110 minutes, a few more at 130 minutes, etc. It was like a switch
watch of meshing rotational gears that could always have different sequences
with very, very few songs. Mikes AM top 40's in the late 60's had as few as
30 total songs.

The spread to include lots of recurrents and oldies came on gradually, often
as a reaction to competition. However, if you look at stations like Power
106 in LA, you will not see more than 120 tunes on the air today!

Source record: 14505

Exactly right... my top 40 experience alway had :
12-15 HOTS which played every 135 minutes (2.25 hrs)
15 "mediums" which played every 4 hrs
10-13 "lights" which played every 5-6 hrs
5-10 "breakers" (#40-50) each played every 8-12 hrs
25-60 "recurrents" 6-12 months old usually 2-3/hr.
and 2 "golds" per hour (some hours had 3) 1 year or older

1945. Re: Backtiming (was Modern radio...)

Newsgroup: rec.radio.broadcasting
Date: 2001-04-25 21:26:05 UTC
From: Ken Smith <NOSPAMbeatles@tdo.infi.net>
Message-ID: <teeg7dkf1cdt30@corp.supernews.com>
Source record: 14506

"Jeffries, Mark" wrote:

> Considered."

I'm a board operator at 88.9 WFSU-FM in Tallahassee, the local NPR affiliate. My shift is during "Talk Of The Nation" and "All Things Considered". I work in conjunction with the computer that runs the station (the automation software was written by an engineer at the station; it is quite unique and has never failed).

During the breaks from NPR, the computer runs scheduled underwriter announcements for part of a minute. The rest of the time is mine to fill with locally-produced promos or weather, and music. I always find fill music that ends cold, and backtime it to end seamlessly with the start of the next NPR segment.

What makes this possible to achieve with 100% success is the Technics CD players they use, which will allow you to go back however many seconds from the end of a track, hit 'pause' and 'program', and it will then play back the number of seconds you told it to, and stop.

It's a big change from 20 years ago when it was difficult to do an accurate backtiming maneuver with records, because as we found out, at quartz-locked speed, the time listed on most records is wrong. At least CDs have an accurate time code!

I guess other formats don't require backtiming for anything, but I use it every day.

Thanks for letting me in on this discussion.

Ken

1946. FAQ: Old Time Radio (OTR)

Newsgroup: rec.radio.broadcasting
Date: 2001-04-26 00:02:20 UTC

The Official Old-Time Radio (OTR) FAQ
Frequently Asked Questions (FAQ) File
for OTR
(Old-Time Radio)

Last Modified: Tuesday, October 17, 2000

---------------------------------------------------------------------
Copies of this FAQ are distributed quarterly to rec.answers,
rec.radio.info, rec.radio.broadcasting, rec.antiques.radio+phono and
other news groups; and are on file at bloom-picayune.mit.edu in the
file: /pub/usenet-by-group/news.answers/radio/old-time-faq. A recent
text version can usually be found at
http://www.old-time.com/ffiles/otr.faq The most recent HTML-ized
version is at http://www.old-time.com/otrfaq.html

---------------------------------------------------------------------
Table of contents:

Q01. What is "OTR"?
Q02. You haven't mentioned OTR music, why not?
Q03. Where can I buy recordings of old radio shows?
Q04. Which vendors have (lower prices) (higher quality) (faster
response)?
Q05. Are OTR shows rebroadcast? If so, where and when?
Q06. I remember a great show called (x). When was it aired?
Q07. Are there any books about OTR?
Q08. Does anybody trade tapes of OTR shows?
Q09. What's this stuff about Copyright?
Q10. How can I get my local radio or TV station to broadcast OTR
programming?
Q11. I have some old transcriptions and tapes, how can I make them
sound better?
Q12. Are there any OTR clubs near me?
Q13. I have some OTR tapes of the same program, but their dates are
different. Why?
Q14. Is there anywhere I can get a complete listing of all the
episodes in a serial?
Q15. Is there anywhere I can get a written synopsis of the plots or
themes of OTR programs?
Q16. Is there a World Wide Web page (URL) I can access for more info?
```

Q17. Is there an email newsletter on OTR? How do I subscribe to it?
Q18. What ever happened to the person that played [insert character] on [insert name of show]?
Q19. What is the best way to archive OTR programs?
Q20. My old reels squeak. Why does this happen, and can I fix it?
Q21. Where can I find more information about antique radios?
Q22. What is the best radio / antenna to get distant OTR stations?
Q23. Is there a group for modern radio drama ("new-time radio")?
Q24. I have only email access to the Net. Can I still get the files at your site?
Q25. I have never heard "Old Time Radio". Can I get an audio sample via Internet?
Q26. I have lots of loose OTR cassettes filling my drawers. Is there a better way to store these things?
Q27. All this new software is a bit difficult for me to use, as I am blind. Can you give me any assistance on how to access your page?
Q28. I am interested in re-creating some OTR drama. Where can I get scripts?
Q29. I can hear what sounds like another program playing in the background on many of my OTR tapes. Is this due to the tuning on the old radio or to the tape recorder that recorded the program?
Q30. Can I chat with other OTR fans on the internet?
Q31. Where can I buy 1970s CBS Radio Mystery Theater programs?
Q32. Is there an internet news group for old time radio?
Q33. OTR network shows were usually heard at the same local time, no matter what the time zone. How did they do this?
Q34. I'd like all the information there is about [insert name of OTR show]. Is there a FAQ that covers all the shows ever on the radio?
Q35. Is there any information on OTR conventions?
Q36. Are there any WWW Bulletin Boards where I can post OTR questions and read OTR information?
Q37. I would like to find recordings of [fill in rare OTR show name]. I have seen the show mentioned in Jay Hickerson's book, but haven't seen the show in any of the paper or on-line catalogs. How do I get this show?
Q38. I see a lot of OTR MP3s on the WWW. Are these worth collecting? How about the OTR CD-ROMs being offered on the WWW, are they worth the money?
Q39. Were any of the old-time radio personalities interviewed recently? Where can I find these interviews?
Q40. What MP3 player is best for OTR?

Q01. What is "OTR"?

A01. OTR is an acronym for "Old Time Radio", a term loosely applied to radio programs broadcast from the dawn of broadcasting to the very early 1960s. Alternate names are "radio nostalgia", "golden age radio", etc. Usually this applies to radio drama, mystery stories, comedy and adventures. Some individuals classify the resurgence of this type of radio programming in the '60s and '70s as "Revival

Radio", and similar programming since the '70s as "Modern Radio Drama". Purists even discriminate between the "Golden Age" (late '30s and the decade of the '40s) and the "Silver Age" ('50s). In any case, there are plenty of programs of various types that are enjoyable entertainment. Best of all, they don't require a large screen TV to enjoy 'em -- the "visuals" are provided by the listener's imagination.

Q02. You haven't mentioned OTR music, why not?

A02. There was a good deal of big band, bluegrass, country and other music broadcast during this era. For some reason, there seems to be more current interest in the dramas rather than in the music. You will find much more discussion about this topic in alt.music.big-band or the various news groups specializing in music of various types. Bluegrass fans might enjoy the Old Time Music on the Radio WWW pages. (They happen to use the same acronym, "OTR", but are not affiliated with The Original Old-Time Radio (OTR) pages). In addition, there is a Big Band and Other OTR Music BBS at www.old-time.com/otrbbss.html/

Q03. Where can I buy recordings of old radio shows?

A03. There are several individuals and companies willing to sell tapes and CDs of OTR programs. A partial list can be obtained from the www.old-time.com site. Many public libraries have a small stock for perusal as well. Some vendors and collectors even have their own WWW pages.

Q04. Which vendors have (lower prices) (higher quality) (faster response)?

A04. Prices, quality and service differ somewhat among all vendors. Check with other OTR fans to learn of their experiences, then check with potential vendors.

A comparative price chart, listing many vendors, is available at the www.old-time.com site.

Audio quality is an important consideration when purchasing recorded tapes. As yet, there is no "standardized" description of sound quality. Jim Widner and other OTR collectors have suggested various metrics to describe the quality of OTR recordings. Discussion of these standardized descriptors is summarized at the www.old-time.com site

---

Q05. Are OTR shows rebroadcast? If so, where and when?

A05. Yes, several AM and FM radio stations, satellite feeds, a shortwave station, and at least one Public Access TV station

rebroadcast OTR. Check the Old-Time WWW page for current info. If you learn of other sources, leave a note!

For AM listening, try the National Radio Club's AM Radio Log, 17th Edition: Complete Listing of U.S. and Canada AM Radio Stations (Mannsville, N.Y.: NRC, 1997). All AM stations carrying things like "Old Time Radio" are listed with the format code NOS (Nostalgia), and there are lots of other codes. [Order from NRC Publications, Box 164, Mannsville NY 13661-0164 USA. Price is: $22.95 post paid]

For FM listening, try Bruce F. Elving's FM Atlas (Esko, MN: FM Atlas Pub., 1993). Alongside lists, this has maps of your area and its stations as well. [Order from Bruce Elving, PO Box 336, Esko MN 55733-0336. Price Range: $11.00 + approx. $1.00 s/h]

The M Street Radio Directory, M Street at +1 615-251-1525 voice, or +1 615-251-8798 FAX. The address is M Street Corp., PO Box 23150 Nashville, TN 37202 The price for the 8th edition is $65.00 plus S&H

Q06. I remember a great show called (x). When was it aired?

A06. If the show was heard nationwide, look through the program databases / logs at the Old-Time site or at Jerry Haendiges' site (see answer A14 below). If the show was only on local radio, you will have more difficulty in finding an answer. Checking with your local radio stations is probably the best bet.

Q07. Are there any books about OTR?

A07. Yes, there are many books related to OTR. See the www.old-time.com site for a bibliography of several hundred books. There is also a page where you can read or enter critiques or reviews of various books on OTR.

Jim Widner and Everett L. Slosman left this address for a bookstore specializing in OTR books:

Rainy Day Books
P.O. Box 775, Rt. 119
Fitzwilliam, NH 03447
(603)585-3448

Bob Crump reminded us that most good used book stores will do a nationwide search for a title, if given enough time. Henry Brugsch related a good experience with the following on-line bookstore:

Acorn Books acornbks@netcom.com

There are also several "book finding" services that will help obtain old/out of print books for a fee.

Q08. Does anybody trade tapes of OTR shows?

A08. Yes. Check with the various on-line OTR services. Leave a note in the OTR Digest, alt.radio.oldtime, or Ray Plumlee's OTR Traders BBS at http://otr-trader.com/ Remember to observe copyright laws!

Q09. What's this stuff about Copyright?

A9. The copyrights on some OTR shows have expired. Several copyrights have been renewed, and some may have fallen under "common law" copyright (even though they were not originally copyrighted). 1970s era Berne Convention agreements further cloud the issue for non-lawyers. See the Old-Time WWW site for the latest "common sense" and legal citations.

A concise answer was given by 'A. Joseph Ross' (lawyer@world.std.com) (used with his permission):

Just to get a little perspective in this
controversy, copyrights do expire. Under the old
copyright law, a copyright was good for 28 years
from the date of first publication, renewable for
another 28 years, for a total of 56. Under the 1976
act, those copyrights were extended to 75 years,
provided they were renewed. Copyrights under the new
law, which took effect on 1 January 1978, are good
for the life of the author plus 50 years. Copyrights
on anonymous works, works made for hire, etc. are
good for 75 years after first publication.

So, since otr has just barely been around for 75
years, little or none of it is in the public domain
yet by reason of having been around for a long time.
The question of what constitutes publication, and
the fact that sound recordings could not be
independently copyrighted until the new law took
effect add additional complications.

Q10. How can I get my local radio or TV station to broadcast OTR programming?

A10. Call the station and tell them of the many people who like to listen to OTR. Suggest this programming will increase the number of listeners and help buy things from their advertisers.

Shawn Fulper-Smith (shawnf@cc1.uca.edu), a managing director of a non-commercial station, tells us:

The days of radio being ruled by the artisans is over, and
for some time now it has been in the hands of people who
only look at the bottom line, so to reach them you must
talk through public radio pledges, or through sponsors

on commercial stations.

Don Fisher (dfisher@sover.net) has been successful in getting his local Public Access TV station to rebroadcast OTR. In fact, Don is the MC of the program. Contact him for hints on how to get your Public Access TV station to do something similar.

Elizabeth McLeod (lizmcl@midcoast.com), who has spent more than 15 years working in local radio, gave the following advice:

I can tell you that one phone call from a listener means absolutely nothing to a program director. PD's are totally under the thumbs of their General Managers -- and GMs, in turn, base their decisions EXCLUSIVELY on sales issues. It doesn't matter how many people want to hear something -- if the GM doesn't think he can sell it, if the GM doesn't think it'll bring hard cash into the station, it won't get on the air. Period.

The only reason a commercial station exists is to make money for its owners. ALL decisions at the station, be they about programming or anything else, are made with this in mind.

Don't bother to approach the station itself, APPROACH THE STATION'S ADVERTISERS!!!

Listen to the station and figure out who its biggest sponsors are. Generally, they'll be local banks, car dealers, insurance agencies, and appliance retailers. Do you know anyone connected with these advertisers? Then approach these people. Tell them you've heard their ads on such and such a station, and that you think a lot of people would be interested in hearing OTR, and that advertising on an OTR series might be a good strategy. And get your friends to do the same. And be persistent! In other words, SELL THEM ON THE IDEA!

You need to keep in mind that some types of stations are more likely to air OTR than others. If your local station is has a firmly-defined format, you are probably "S-O-L," as the saying goes. They won't break format, no matter what. On the other hand, if you have a local non-commercial community-type station, way up on the left side of the FM dial, you may have a very good chance of success.

Q11. I have some old transcriptions and tapes, how can I make them sound better?

A11. You might try using a good equalizer and/or digital signal processing (DSP) unit between the playback and recording devices. Some people have mentioned that the Radio Shack DSP unit does a fair job. There are also other, more expensive DSP units available from Ham radio stores and audio stores. Some subscribers have attested to the efficacy of the Timewave brand of DSP units.

There are several computer programs available to convert analog sounds (as on a tape) to a digital format (e.g. WAV file). Some of these computer programs also have noise reduction, filtering and enhancement capabilities. In many cases, application of digital technology will improve the sound of a noisy or deteriorating analog tape. There is a problem, however, if the digitized rendition is re-recorded to tape, and subsequently re-digitized for further treatment. Since digitization is a sampling technique, sampling a sample can result in extremely degraded sound patterns.

A very nice program that will convert analog material to digital format is Audiotools by Andrew Fish. For more information on this software, visit the Audiotools BBS at www.old-time.com/otrbbss.html or Andrew's site at http://www.btinternet.com/~amfish/index.htm

From: hhoward@mindspring.com (Henry Howard)

For cassette machines (and reel to reels for that matter) occasionally take a "Y" cord and connect the output of your cassette player to both "sides" of the "Y". Plug the combined side of the "Y" into your stereo. If the sound is mush(ier) than what you hear normally, you have a head alignment problem (assuming that the tape you are listening to was properly aligned.)

From: Ron_B._Hare@livewire.com (Ron B. Hare)

Dolby HX on the recording deck makes an audible difference. Other audio optimization features are of negligible value for OTR. Dolby HX also requires no playback decoder.

[Dolby HX uses or "preserves" the Dolby noise reduction method of the master tape when duplicating - ed.]

Q12. Are there any OTR clubs near me?

A12. Check the club listings in the Old-Time WWW page, and leave a note in one of the on-line OTR groups asking about local clubs for your area. If you find a club that is not listed at www.old-time.com, ask a club officer to send a note to the webmaster with particulars about the club.

Q13. I have some OTR tapes of the same program, but their dates are different. Why?

A13. Sometimes broadcasts are dated according to their original broadcast date, and sometimes according to a date on which they have been rebroadcast. For instance, the Armed Forces Radio Service rebroadcast many Mutual Radio transcriptions at a later date. Your tape may be of one of these later dates. Alternately, somebody might have made a mis-typopgoof.

Finally, some shows -were- broadcast more than once, and sometimes on different programs! For instance, a few Suspense shows were re-scripted / re-cast for Escape. You might also find similarities between certain SF shows as done on X Minus 1 and Dimension X.

Q14. Is there any place where I can get a complete listing of all the episodes in a particular program series?

A14. Some on-line OTR collectors have contributed Program Logs for several well-known series. The logs are available at www.old-time.com/otrlogs/ . While you are logged in at that site, check the "Humongous OTR Database" (a database of contributed catalogs and libraries), which is searchable with your WWW browser.

The "logs and publications" entry at the Old-Time WWW site gives names and addresses of several vendors of these items (thanks to RadioJoe5@aol.com (Joe Coleman) and others).

Jerry Haendiges maintains a VERY complete set of OTR program logs, at his Vintage Radio Place: (http://www.otrsite.com/radiolog)

Jay Hickerson maintains several logs and lists, as well as -Hello Again-, an OTR newsletter. Jay is the author of The Ultimate History of Network Radio Programming and Guide to All Circulating Shows. You can see more info at http://www.old-time.com/sponsors/hickerson.html

Jay's address is:

Jay Hickerson JayHick@aol.com
Box 4321
Hamden, CT 06514
(203) 248-2887 FAX (203) 281-1322

Q15. Is there any place where I can get a written synopsis of the plots or themes of OTR programs?

A15. Again, some vendors include this information with their catalogs. If you would like to contribute your interpretations of OTR plots or themes, send them to the on-line OTR services or to webmaster@old-time.com for inclusion in one of the databases.

Jim Widner and others have contributed some synopses / introductions to various programs. They are on file at http://www.otr.com and http://www.old-time.com.

David Hassell maintains a growing selection of program summaries at
http://members.aol.com/DavidLHsl/otr/otrlist.html

Also check Frank Passage's logs at the old-time WWW site; most
contain a short synopsis of the program.

Many of Jerry Haendiges' logs contain excellent summaries of not only
the program series, but of each episode as well.

Many of the local and national OTR clubs maintain informational
libraries with this material.

Q16. Is there a World Wide Web page (URL) that I can access for more
information?

A16. Yes, there are several WWW sites. Each site contains different
information, so you might want to visit them all. The major OTR WWW
sites all have links or pointers to each other, so you can explore
many topical areas within old time radio. Good places to start
exploring are:
www.old-time.com
or www.otr.com
or www.otrsite.com

A fairly lengthy list of WWW sites with some kind of OTR affiliation
is maintained at www.pe.net/~rnovak/jack.htm

An excellent database of OTR-related WWW sites, with an explanation
of the contents of each is at
www.otr.com/cgi-bin/cgiwrap/otr/db.cgi?uid=default

Q17. Is there an email newsletter on OTR? How do I subscribe to it?

A17. At least two email newsletters currently exist.

The Old-Time Radio Digest (AKA "Internet OTR Digest") is a very
popular and freely available electronic newsletter, delivered
nightly. Its purpose is to foster general discussions about the hobby
of collecting, preserving and listening to OTR. To subscribe, send an
email

TO: old.time.radio-request@oldradio.net
SUBJECT: subscribe
(The body of the message is ignored)

A general discussion list, "OldRadio", is maintained by a long-time
OTR fan, participant in many OTR conventions, and internet guru,
promises spam-free editions with good "flame" and off-topic
prevention, as well as articles by guest experts. To subscribe, send
email

To: oldradio-request@oldradio.net
Subject: Subscribe

(The body of the message is ignored)

Q18. What ever happened to the person that played [insert character] on [insert name of show]?

A18. Check the "Personality Pages" at www.old-time.com for home pages of several well-known OTR personalities. Also check the Where Are They Now pages at www.440int.com.

Q19. What is the best way to archive OTR programs?

A19. The most popular way seemed to be reel-reel tapes, using each of the four tracks to record monophonically. Modern reel machines are in the > $2,000 range, and used open reel machines are becoming harder to find.

Purists claim open reel tapes are best stored "tails out", in which the tape is played (not fast-forwarded) onto the take-up reel. This method of storage makes "print through" of the magnetic sound image a little less noticeable because the "echo" will come before the louder sound that caused it, and be somewhat masked by the louder sound.

Cassettes are generally fine for portability / ease of use / exchange, but they suffer from several problems when used as a long-term storage medium. These problems include "overwinding" and splitting of the tape at the leader. Because of their thinner track width and slower speed (1 7/8 IPS), the density of the information is greater than with wider and faster (3 3/4 IPS or 7 1/2 IPS) reel tapes. This leads to a greater loss of signal (particularly high frequencies) over time.

The Hi-Fi VHS tape is gaining in popularity because of its six-hour storage capability and relatively robust mechanical construction. "Hi-Fi" decks need no video signal to synch the systems, and can thus record audio without an accompanying video signal. One T-120 Stereo Hi-Fi VHS cassette can easily hold 12 hours of OTR audio (recorded monophonically on the right and left channels independently). If the linear track can be accessed independently, this will add six more hours of recording time. There is very little fidelity loss when using this medium to duplicate programs.

Conrad Trautmann (CONRADTRAUT@delphi.com) left this note in response to a query about finding used reel-reel machines:

You can also call Harris/Allied used equipment division at
1-800-622-0022 or call Radio World magazine at
703-998-7600 for subscription information. Radio World is
an industry trade and has used equipment listings in the
classifieds once a month.

(Jim Blackie [jblackie@aol.com] indicates that the Harris/Allied number has changed to: 1-800-300-0733.)

From: vintage@infohouse.com (Andy Blatt)

I wholeheartedly recommend Play It Again, Sam of Lakewood, Ohio. They also sell used Pioneer reel decks with a warranty and accept major credit cards for repair or used machines. The address is 12611 Madison Avenue in Lakewood, Ohio 44107. The phone number (no answering machine, no fax machine) is 216-228-7330. As far as pitch control cassette decks, Marantz offers several one of which is the three-head portable PMD-430.

[Play It Again Sam has a WWW page at www.playitagainsam.com - ed]

Richard Novak (rnovak@ix.netcom.com) wrote this informative note on using Hi-Fi VHS as an archival medium:

To clear up any misunderstandings concerning VHS HiFi machines and their ability to record audio, I offer the following..

It should be understood that what distinguishes a HiFi machine from a linear machine is that the audio track is recorded helically (diagonally) on the tape along with the video track. On linear machines the audio is recorded at the upper edge of the tape (and a control track at the lower edge, if anyone wonders what the extra head is for.)

On a HiFi VHS the audio is not recorded as an analog signal as would be the case with linear recording. Instead the analog audio signal frequency-modulates a carrier which is then recorded between the video tracks. A duplicate signal is also recorded linearly to maintain compatibility with linear VCRs. The FM signal recorded on the HiFi track should not be confused with FM radio broadcasts. One of my customers thought the FM switch on his HiFi was for recording FM from the radio. Today's machines no longer use the label "FM", instead use "HiFi". Less confusing.

The sound recorded from FM radio broadcasts (or any other source) onto HiFi VCRs is virtually indistinguishable from the source. The material can be dubbed to cassette with no generation loss.

There is no difference in audio quality using either six hour or two hour mode.

It is true that at slower speeds the diagonal tracks are closer together. This does degrade the video signal as anyone knows who has compared six hour video with two hour video. But does not degrade the FM carrier with the audio track.

The tape writing speed of the audio track in HiFi mode is the same regardless of linear speed. This is because the head speed remains constant and is independent of the linear tape speed.

Worked it out once and it is around seven meters per second. Whatever it is, it's a whole bunch faster than 7 1/2 inches per second. If anyone really wants to know the writing speed, it is the circumference of the upper cylinder (or video head) multiplied by the rotational speed which is 30 revolutions per second, or 1800 revolutions per minute. (Two heads 180 degrees apart at thirty rps results in 60 frames per second.)

Who cares how it works.. The point is that VHS HiFi is the best and cheapest medium around for recording masters. But not for archiving. Most experts still agree that reel to reel is the best and most reliable method of archiving. (Sticky shed syndrome from the 70s notwithstanding.)

Although Bob Burnham does not like dubbing (two-well) cassette decks for producing highest-quality cassette tapes, he does have a few recommendations:

One of the BEST dubbing decks (if you must use one) is made by Denon. Both sides can record at the same time and both sides have pitch control, and both sides have separate output jacks for connecting to other equipment.... almost like TWO (click) TWO (click) TWO DECKS in one. Tascam (Teac's pro division) also recently introduced their model 303 double deck. If it's anything like the 202 MKII, it's probably not worth it. You pay a high price for the name, but still basically consumer grade inside and lots of plastic. Denon is better.

I mentioned Kingdom Tapes in Mansfield, PA as a good source for cassette copiers, and equipment servicing. All the duplicators I have in use today came from this company. They have all the major brands (plus their own house brand), also tape decks, blank cassettes, etc. Great service (same day usually available). They'll beat anyone's price on cassette dubbers. 800-788-1122. Fax is 717-662-3875.

Bob Burnham / BRC Productions / P.O. Box 2645 / Livonia, MI 48151 platecap@gatecom.com / platecap@eworld.com

Several hobbyists are now investigating the utility of using CD-ROM or MiniDisks for archival purposes. CD-ROMs can hold hundreds of hours of program material, but at the cost of time-consuming conversion from analog to digital representations. Selection of appropriate encoding and compression technologies is extremely important to prevent digital artifacts. MP3 (MPEG III) compression

seems to be more favored than is RealAudio(R) compression.

Q20. My old reels squeak. Why does this happen, and can I fix it?

A20. There are at least two causes for "squeaky reels" on a reel-reel tape recorder. (1) The tape edge may be rubbing against the rim of a distorted take-up reel, or (2) the oxide may be sticking to your erase (or other) heads. If the former, the least frustrating alternative is probably a new take-up reel. If the latter, Fred Korb left this note:

If you have any squeaky reels that you would like to recover, I will be glad to send you more information on how to do it. Just send me a stamped self addressed # 10 envelope and I will respond. Send your request to: Fred Korb, c/o Oldtime Radio Collectors and Traders Society, 725 Cardigan Court, Naperville, Illinois 60565-1202. I am willing to help you preserve the sounds of radio days gone by.

[Editor's note: Fred's method consists of a kit by which a lubricating film can be automatically applied to the tape as it is played. I tried it. Although temporary, it does indeed work! I'd recommend it for those squeaky tapes that you wish to re-record onto newer reels.]

Richard Fish (lodeston@bluemarble.net) also left this helpful info about an alternative method:

HYRDROLYZATION is the culprit. The tape material -- the backing, or the binder compound used to stick the magnetic particles to the plastic backing -- has absorbed water from the air. The water molecules actually make the tape expand a bit, so it doesn't fit the machined tape-guides properly anymore; and they can interfere with the lubrication impregnated into the tape; and it is theorized they can even interfere with the polished smoothness of the tape surface.

WHY SOME TAPES AND NOT OTHERS? It depends on the formulation of the plastic backing and binder. In the mid-70s, both 3M (Scotch) and Ampex, the two major tape manufacturers, started experimenting with their formulas. They thought they were introducing major improvements, but instead created a tape much more prone to hydrolization than anything had ever been. The problem did not show up for years, and the formulas did not get corrected until sometime in the mid-'80s. Theoretically any tape could get hydrolyzed over a long period of time, especially if stored in a high-humidity situation, but in

practice most squeaky tapes were made (roughly speaking) between 1975 and 1985.

WHAT'S THE FIX? Tom Lopez at ZBS (the most prolific and entreprenurially successful producer of radio drama in the US today) gave me his formula and I've done it many times now and it works:

Bake the tapes in a convection oven for 8 hours at 130 degrees Fahrenheit. It is entirely possible to bake a tape twice if the first time doesn't do the trick. You get about a three-week "window", sez Tom, before the tape starts to re-absorb water. So the best deal is to bake the tape and immediately make a copy. But if you forget to do it and it re-hydrolyzes, you can bake it again.

Q21. Where can I find more information about antique radios?

A21. An excellent place for discussions about antique radios, phonographs and accessories is the rec.antiques.radio+phono news group, created by Bill Robie. A pointer to his FAQ may also be found at http://www.old-time.com. Basically, r.a.r+p

- Is a *discussion* group, rather than a sales group (see r.a.m) - Focuses on radios, phonos, and related materials made before the 60s - Avoids "ham" radio gear (the Boat Anchors group covers that) - Has a -very- comprehensive FAQ that new folks should read

The University of Maryland has a WWW site entitled "Broadcast Pioneers' Library". This is an excellent resource for the serious / professional researcher. It can be accessed through the old-time WWW site, or directly via the URL: http://www.lib.umd.edu/UMCP/LAB/

Additional sites with pictures of old radios or other hardware resources may also be found at http://www.old-time.com

---

Q22. What is the best radio / antenna to get distant OTR stations?

A22. Several readers have been acclaiming the GE SuperRadio III as an excellent choice for picking up distant AM stations that carry OTR programming. Although the tuning dial has notoriously poor calibration, the sensitivity and selectivity seem superior to other radios.

Some readers have had good success with the Select-A-Tenna antenna advertised in several magazines, and the Grove Catalog. The S-A-T seems to be rather directional, and may eliminate off-axis interference.

Ham Radio magazines sometimes carry information about small loop antennas for AM DX-ing. Some pointers to instructions on how to build them are at http://www.old-time.com. Also, Dan Hughes

(dan@soltec.net) left this note:

Several years ago one of the electronic magazines ran
plans with dimensions and number of turns, etc to build
one of these antennas. I have built several and I'm no
mechanic. If you (or anyone else reading this) would
like a copy of the article and plans, visit my website
at http://members.soltec.net/~dan

If you are interested in AM Broadcast Band reception, and technical
articles related thereto, send a SASE to the following address for
their product catalog:

National Radio Club
Publications Center
PO Box 164
Mannsville, NY 13667-0164

(The National Radio Club also has a WWW page, at www.nrcdxas.org/)

Q23. Is there a group for modern radio drama ("new-time radio")?

A23. There are several USENET groups whose charters include modern
drama. Check the lists on your local Internet provider to see which
are available to you. Here is a list of some of the WWW pages for
radio drama (more may be found at http://www.old-time.com):

Atlanta Radio Theatre Company: www.artc.org
ZBS Media http://www.zbs.org/zbs.html
LodesTone Productions
http://www.bluemarble.net/lodeston/lode.html
Midwest Radio Theatre Workshop http://www.mrtw.org/mrtw

Q24. I have only email access to the Net. Can I still get the files
at your site?

A24. Maybe. WWW pages can be retrieved by email. Get the following
file for more information:

Accessing The Internet By E-Mail
Doctor Bob's Guide to Offline Internet Access

This document is now available from several automated mail
servers.
To get the latest edition, send e-mail to one of the addresses
below.

To: mail-server@rtfm.mit.edu (for US, Canada & South America)
Enter only this line in the BODY of the note:
send usenet/news.answers/internet-services/access-via-email

To: mailbase@mailbase.ac.uk (for Europe, Asia, etc.)
Enter only this line in the BODY of the note:
send lis-iis e-access-inet.txt

Since the OTR FAQ is an "official" FAQ, a copy of it is stored at MIT, and is available from the MIT mailserver. For more info on how to get files by email from MIT, send a message

TO: mail-server@rtfm.mit.edu
SUBJECT: [blank]
BODY:
help
end

I have also initiated a simplistic file server. At present, it can handle only a few files. If you have ONLY email access to the Internet, and want more information on what is available by email, send an email in EXACTLY this format:

To: files@old-time.com
Subject: send help.otr

do NOT put anything in the body of the message (it won't be read)

Q25. I have never heard "Old Time Radio". Can I get an audio sample via Internet?

A25. Yes, if you have a suitable WWW browser and sound card. Connect to any of the WWW sites mentioned above, and follow the pointers to their audio clips and / or soundbytes. Many of the soundbytes can be downloaded, and played on your computer's sound card, others will play "realtime" through your multimedia system. There is also a news group, alt.binaries.sounds.radio.oldtime, that tries to transfer OTR shows (news groups are notoriously inefficient at transferring large binary files, however).

You can select from many moderate-length soundbytes at Jerry Haendiges' Preview Listening Lounge at
www.otrsite.com/ra/preview.html

Q26. I have lots of loose OTR cassettes filling my drawers. Is there a better way to store these things?

A26. Collectors with lots of cassettes seem to use just about everything from "underbed cardboard storage boxes" to old soft drink cases. If you want your collection to have a more "professional" look, here is a note from Ron_B._Hare@livewire.com (Ron B. Hare)

You almost need to buy cassette albums from
specialty suppliers. Radio Shack used to carry a
small line of these and charged too much. We are in
the recording studio business, and receive catalogs

from several sources. The one I like best has
some of the lowest prices and unhesitatingly deals
with individuals and will take your credit card
number over the phone for instant shipment (in
contrast to some who require account setup, purchase
orders, prepayment, cash and other nuisances).

They have two catalogs: one for audio and one for
video. Cassette albums are available in a large
number of different styles, sizes and capacities.
The 8-cassette albums I use are CPCN.4+4M/WHT in
white and CPCN.4+4M/RBLU in royal blue. Outside
dimensions are 9 7/8 x 7 x 1 1/4 wide, so they fit
well on a bookshelf. This model also seems to cost
less per cassette than any of the other models,
though logic might lead you to the conclusion that
the larger capacity ones would cost less.
[Polyline has a website at www.polylinecorp.com, and their new
address and phone number are:

Polyline Corporation
1401 Estes Ave.
Elk Grove Village, IL 60007]

Q27. All this new software is a bit difficult for me to use, as I am
blind. Can you give me any assistance on how to read your page?

A27. Yes. Although my WWW page is best viewed with Netscape or
Microsoft Explorer, most pages render well with LYNX and associated
reader software.

Blind visitors who depend on DOS-based software to access the net, or
who use a reading program to audibly display their computer's output
might be interested in a program called "Nettamer". The Nettamer home
page is at www.nettamer.net/

Q28. I am interested in re-creating some OTR drama. Where can I get
scripts?

A28. Check your local or national OTR clubs. Many have a "print
library" that includes scripts. You can also point your browser at
the University of Maryland's script page, at
www.lib.umd.edu/UMCP/LAB/scripts.html

Jack French (OTRpiano@erols.com) said:

One excellent source is the book. "One Hundred Non-Royalty
Radio Plays" compiled by William Kozlenko, Greenberg Publ of
NYC 1941. It's certainly out of print now, but many libraries
would have a copy. I bought mine at a used book store a few
years ago. The 100 radio plays in the book include adventure,

mystery, fantasy, comedy and historical. Most were originally produced on educational stations in the 30s. Authors include Saroyan, Julian, and Liss.

Larry Groebe, of the Generic Radio Workshop, has several pages dedicated to on-line OTR scripts at web2.airmail.net/lgroebe/

Q29. I can hear what sounds like another program playing in the background on many of my OTR tapes. Is this due to the tuning on the old radio or to the tape recorder that recorded the program?

A29. In addition to the old radio being mistuned, similar problems can be caused by one or more of the tape recorders used before you received your copy of the program. Print-through has already been mentioned in Q & A 19. Bob Burnham has a nice explanation of two more problems: crosstalk and channel leakage.

Crosstalk and Channel Leakage are 2 different things. OTR collectors seem to have the most problem with channel leakage.

When you hear another program faintly playing in the background in normal direction, this is usually Channel Leakage. This is a leftover problem from the 1970s & early '80s when most collectors traded on open reel tapes which were quarter-track mono -- there were different (separate) programs on left & right channels. This allowed 6 hours of shows to be placed on one reel. Unfortunately, many collectors would duplicate L & R shows simultaneously. Depending on the quality of the equipment (and its condition) it was common for one program to bleed into the opposite channel...especially if the collector was careless and allowed over-modulation.

Crosstalk results when a tape is recorded (or played back) on a machine with mis-aligned tape heads. It can also occur when trying to record over a 1/2 track recording with a 1/4 track machine with dirty or mis-aligned erase head. You usually will hear another program playing IN REVERSE in the background.

HOW TO PREVENT CHANNEL LEAKAGE AND CROSSTALK...

If duplicating quarter track reels, copy ONE channel or track at a time. As for crosstalk, make certain your machines are kept in proper alignment. Use a high quality BULK ERASER if you re-use old tapes... this is especially true for those who use reels.

Sorry, there is NOTHING you can do to remove these flaws once they are there.

Q30. Can I chat with other OTR fans on the internet?

A30. Yes. Lois Culver (lois@chatlink.com) and other OTR fans meet every Thursday at 8:00 PM Eastern time, on Channel #OldRadio, on the StarLink-IRC. If you are unfamiliar with Internet Relay Chat, please get software and instructions from your favorite Internet Service Provider or shareware/freeware software site, or connect to www.old-time.com/irc.html for basic instructions.

Q31. I'm looking for copies of old "CBS Mystery Theatre" radio programs, primarily from the 1970s era. Does anyone know where I can call or write to obtain such items? I'd like to purchase a complete set if possible.

A31. Jack French (OTRpiano@erols.com) left the following information:

You most certainly do not want a complete set of this series, because you couldn't afford it. There were 2,970 shows aired so even if you could find them for a buck an episode, you'd have to cough up three Gs. The series ran from 1-6-74 to 12-31-82 and since it came so late in radio history, every episode was recorded by somebody. All episodes are still copyrighted, and CBS enforces their copyrights. Therefore no dealer is going to list them, and collectors are reluctant to sell or rent them. Your only hope is to find some way to get copies in a fashion not in violation of copyright law.

Editor's note: By my count, there were about 1400 different CBSRMT shows. The rest may be duplicates.

Q32. Is there an internet news group for old time radio?

A32. Yes. alt.radio.oldtime is available via some news servers. Since many news servers ignore alt.groups, you may need to contact your ISP to get that news group listed locally. See www.old-time.com/newsgroups.html for more information. Also try www.deja.com to sample some of the messages.

Q33. OTR network shows were usually heard at the same local time, no matter what the time zone. How did they do this?

A33. Two ways: Many networks used telephone lines to carry the show from the studio to transmitter sites. The show was done live at least twice - once for the East coast, once for the West. After Bing Crosby spearheaded the introduction of recorded shows (about 1948), the East coast show was recorded for later telephone transmission to the West coast.

Q34. I'd like all the information there is about [insert name of OTR show]. Is there a FAQ that covers all the shows ever on the radio?

A34. No. There are many books (Remember them? They have words printed on pieces of processed dead tree) written about what we now call "OTR". See answers A7 and A37. If you would like to contribute an original article about one or more facets of OTR, many of the webmasters of on-line OTR sites would be happy to consider archiving it.

Q35. Is there any information on OTR conventions?

A35. Yes. There are several. Here are some of the larger ones:
* Annual OTR and Nostalgia Convention in Cincinnati, OH (April)
* Radio Classics Live, Brockton MA (May)
* Annual Lum and Abner Society Convention (June)
* REPS Radio Showcase (June)
* Friends of Old-Time Radio (October)
* SPERDVAC (November)

See the convention page at www.old-time.com for specific dates and contact person info.

Q36. Are there any WWW Bulletin Boards where I can post OTR questions and read OTR information?

A36. Yes. Try Old Time Radio Bulletin Boards at www.old-time.com/otrbbss.html. That page contains a list of several old-time radio oriented WWW bulletin boards. You can also access OTR message boards at www.lofcom.com

---

Q37. I would like to find recordings of [fill in rare OTR show name]. I have seen the show mentioned in Jay Hickerson's book, but haven't seen the show in any of the paper or on-line catalogs. How do I get this show?

A37. Jack French, an expert on old-time radio and editor of Radio Recall, gives us this information:

There's good news and bad news....the good news is if Jay's compendium says they are in circulation, somebody has them. The bad news is there is no guarantee you'll find them. Let's start at the beginning. If they're in Jay's book, and there is either the initials of a dealer, log preparer, or collector with that entry, the assumption is that person has some or maybe most. If the entry is devoid of such, we push on. Few dealers list rare shows in catalogs since so few people want to buy them. Generally the catalog represents a small part of a dealer's or collector's total holdings. There are at least forty OTR dealers in the country so you can

contact each one with a specific inquiry. Most collectors belong to at least one OTR club. There are about 20 clubs. Most will publish your request in their newsletter for little or no cost. Most of the members of OTR clubs are not on-line so this is the only way to reach them. There are over 25 state and college archives that may have the shows. Most have no catalog but will answer any reasonable inquiry. Contact them all. All of the contact addresses for OTR clubs, pubs, dealers, and archives are contained in NARA OTR Source List. Contact me separately if you're interested in this low-cost research aid.

Q38. I see a lot of OTR MP3s on the WWW. Are these worth collecting? How about the OTR CD-ROMs being offered on the WWW, are they worth the money?

A38. Just as with home made recordings of any type, the quality of OTR MP3s varies considerably. Some of the online MP3s may have been converted from low sample rate RealAudio(tm) files, others might have been "ripped" from low-generation masters. Most CD-ROMs for sale on the WWW were recorded using these varying-quality MP3s. In other words, the MP3s in themselves are "collectable" only for the enjoyment one might get from listening or further trading. They have little intrinsic value, and are of unknown quality. It might help to associate your estimate of quality with the provider's name, to attempt to predict quality and avoid long downloads of poorly prepared material. Another point to remember - some OTR is still under copyright protection. Please observe applicable copyright laws.

Q39. Were any of the old-time radio personalities interviewed recently? Where can I find these interviews?

A39. A large number of OTR personalities were interviewed by the author John Dunning. Stewart Wright, Editor of the RHAC Newsletter gave us the following information. (You can learn more about RHAC by checking their page at http://www.old-time.com/sponsors/rhac.html)

The Radio Historical Association of Colorado (RHAC) has tapes of many OTR personalities interviews that were conducted by John Dunning in the 1980's. Several Radio personalities such as Elliot Lewis were interviewed more than once. The following is a fairly complete list of the Dunning interviews in the RHAC library.

Steve Allen, Elvia Allman, Eve Arden, Hy Averback, Parley Baer, Parley Baer and Georgia Ellis, Parley Baer and Sam Edwards, Parley Baer and Whitfield Conner, Bill Baldwin, George Balzer, Harry Bartell, Andre Baruch and Bea Wain, Court Benson & Grace Matthews, Bernice Berwin, Mel Blanc, Ray Bradbury, Curley Bradley, Frank Bresee, Candy Candido, Hal Cantor, Charles

Collingwood, Whitfield Conner & Haila Stodd, Whitfield Conner and Parley Baer, Whitfield Conner and Virginia Greeg, Norman Corwin, Mary Jane Croft, D Day Program J Macvane & Lar, Dennis Day, Rosemary De Camp, John Dehner, Kenny Delmar, Jerry Devine, Howard Duff and Dick Joy, Richard Durham, Ruth Duskin Feldman, Sam Edwards, Sam Edwards and Janet Waldo, Alice Faye, George Fenneman, Morton Fine, Al Flanagan and Dick Mcdaniel, Paul Frees, Fred Friendly, Alice Frost, Art Gilmore, Roberta Goodwin (Bob Bailey's Daughter), Gale Gordon, Virginia Gregg, Virginia Gregg and Whitfield Conner, Phil Harris, Clarence Hartzell, Dennis Horseford, John Houseman, Bill Idelson, Raymond Johnson, Jack Johnstone, Jim Jordan, Dick Joy, Roland Kibbee, Sheldon Leonard, Phil Leslie, Larry Lesueur, Elliot Lewis, John Macvane, Fletcher Markle, Fletcher Markle, Grace Matthews & Court Benson, Dick McDaniel and Al Flanagan, Dick McDaniels and Pete Smythe, Marvin Miller, Shirley Mitchell, Carlton E Morris, Morris Kaplan, Frank Nelson, E Jack Neuman, Nelson Olmstead, Vic Perrin, Michael Raffetto, William N Robson, Eric Sevareid, Anne Seymour, William L. Shirer, Penny Singleton, Pete Smythe Collegiate Band, Olan Soule, Berne Surrey, Glenhall Taylor, Irene Tedrow, Cliff Thorsness, Les Tremayne, Lurene Tuttle, Veola Vonn, Janet Waldo, Gertrude Warner, Peggy Webber, Anne Whitfield, and Dr. Paul Winchell.

The Radio Enthusiasts of Puget Sound (REPS) also has interview tapes of many Old-Time Radio personalities. Most of these interviews have been conducted in the 1990's. Personalities include:

John Archer, Harry Bartell, Frank Buxton, Chris Conrad (Son of William Conrad), William Conrad, William Conrad & George Walsh, Stewart Conway, Norman Corwin, Sam Edwards, Herb Ellis, Charlie Flynn, Jim French, Sandra Gould, Burl Ives, Peggy Jordan (Granddaughter of Jim & Marian Jordan), Merrill Mael, Jo Anna March, Les Tremayne, Janet Waldo, Anne Whitfield Phillips, Rhoda Williams, and Douglas Young.

The REPS web site is located at: http://welcome.to/reps

Yesterday USA on the Internet is doing a series of live interviews with OTR personalities about one every two weeks. They start at approximately 8 PM (ET) on alternate Sundays and are about 1 hour in length. The interviews are conducted by John or Larry Gassman. So far they have done Harry Bartell, Herb Ellis, and Conrad Binyon. Listeners can call in questions.

You can find out more information on upcoming interviews by going to the YUSA Home page at http://www.yesterdayusa.com/

Q40. What MP3 player is best for OTR?

A40. MP3s can be played on most computers, memory (RAM)-based players, hard-drive players, and CD-ROM based players. Each player has advantages and disadvantages. A chart comparing various CD-ROM players for OTR playback suitability is at www.old-time.com

---

In ba.broadcast David Kaye <dk@removethis.area.com> wrote:
: Charles Newman wrote the quoted material below:

: " I fount out that is KYEZ in Williams, Arizona, and the city council there
: " is ordering the station off the air. How can anybody, other than the FCC,
: " order a station off the air.

: Let's see...(1) there is no KYEZ in Williams; KYEZ is in Salina Kansas;
: the station you're referring to is probably KYET; (2) KYET is not a
: country station; (3) a search of the Arizona Sun, the nearest daily
: newspaper to Williams, shows absolutely *no* mention of the Williams City
: Council taking any kind of action against KYET. My search went back to
: January 1. One would think that if such an event were to occur, it is so
: rare that it would be covered in the local press, not just in one but in
: several articles.

: So, what's your source that KYEZ, a country station in Salina Kansas is
: going to be shut down by the Williams Arizona city council? Or that *any*
: station is being shut down by that city council?

All this means is that it's just one less station he needs to put on his
next list.

1948. UK Digital Audio Broadcasting

Newsgroup: rec.radio.broadcasting
Date: 2001-04-26 15:02:20 UTC
From: Helen & Laurence Lewis <hanllewis@lhpq.demon.co.uk>
Message-ID: <tege3sg9utujd6@corp.supernews.com>
Source record: 14509

Attention UK Listeners

If you bought into Digital Audio Broadcasting (DAB) to escape the terrible state of FM in order to listen - and enjoy - the new improved BBC Radio 3, you may not have it for much longer.

According to a report in the May edition of Hi-Fi News, senior BBC managers, after driving around the M25 and finding that Classic FM was louder than Radio 3, have increased the output level of their digital transmitters.

In the meantime, Classic FM has reduced its Bit Rate to 160. BBC channels, currently using 192, may follow to allow expansion of the BBC Multiplex.

If you want to retain this wonderful new broadcasting medium, now is the time to use your listener power. (Think of what the French did to M & S.)

Please contact us on: dablisteners@lhpq.demon.co.uk

That is not the way voice tracking works. A good voice tracked show is done
by the jock actually using the tips and tails of the songs in a segue and
precisely tailoring his rap to the time and content and nature of the music
and the place in the hour. It is no different than doing a live show but
without the 4 minute waits for hte song to end. Done right, a tracked show
can have a higher sustained energy level and better content.

I did my first tracked station in '78 and never met a listener who realized
it was not live. Oddly, I never did another tracked station after that...Oh,
the station was #1 in the 13th market.

I know that is the case in many instances, particularly in smaller markets. Where I have been involved, the idea was to free up the jocks to do promotions and other things and to be able to have the best talent on all through the weekend, too.

> "Try sales"...Oh, *HOW* could you stoop so *low*! <BG>

I havbe to say I generally refer to the "sales slugs" in a less than flattering manner. Hwever, a funny thing happened to me back about '85. I was worining on the programming of a staiton that had been on a long downtrend, and got it back to the top 12+. About 9 months later, the owner said that the numbers were great, but that they were not selling anything

more than before so could I manage the sales department. There began an 8-year sting as GSM and Program Consultant rolled into one. I actually enjoyed the selling, although selling a #1 station is generally kinda' neat.

At one point, I had cards that had my name and underneath as title was the word "peddler." Always got a laugh from clients.

> I'm a 'used-to-be' and 'would-like-to-be', but I'm the first to admit
> that I'm my own biggest stopper, because I want my show to be *mine*,
> not what some computer programmed by a salesman in Minnesota thinks

> going for a few years, but no more. I couldn't stand listening to half
> the stuff I was playing...

The right digital system and enough time to put together a show will actually be rewarding. I have also seen cases of stations that are normally live or live assist where vacation days are covered by seemingly live voice tracked shows. It is all about whether management wants to just go the cheap way or whether they want some economy and a really good, well crafted product too.

Machines have no talent. ;-}

1951. UK Digital Audio Broadcasting

Newsgroup: rec.radio.broadcasting
Date: 2001-04-26 15:02:28 UTC
From: Helen & Laurence Lewis <hanllewis@lhpq.demon.co.uk>
Message-ID: <tege441gj3s7dc@corp.supernews.com>
Source record: 14512

Attention UK Listeners

If you bought into Digital Audio Broadcasting (DAB) to listen to the new improved RADIO 3 without the compression and noises afflicting FM, you may not have it much longer.

According to an article in the May edition of Hi-Fi News, senior BBC Managers on the strength of driving around the M25 have decided to increase the output level of their digital transmitters because Radio 3 did not sound as loud as Classic FM.

In the meantime Classic FM has reduced its Bit Rate to 160. BBC channels, currently at 192, may follow.

If you want to preserve this wonderful new broadcasting medium and do not want to switch off, this is the moment for real listener power. (Think of what the French did to M & S.)

If anyone out there thinks like us, please contact us on:

dablisteners@lhpq.demon.co.uk

Oh Yes it does import play lists... and it does it at the time you
choose too. Check your program version. It also inserts station IDs
and pauses in case you want to insert an announcement in between cuts.

Just be prepaired to convert your MP3 library to OTS.
Rick

You got that right David!
WMYQ was straight, out of the book "Bartell Top 40"... 35-40 currents and
900-1000 gold titles.
I also disagree with an earlier post citing WLS as a tight-playlisted
station. In the late 60's thru mid 70's they had an incredible playlist of
gold titles.
I was never privy to the actual numbers but it was over 750 titles.

WCBN WILL DESTROY YOUR FEEBLE FORMATS
ALL YOUR FORMAT ARE BELONG TO US

WCBN - Over 25 Years of Freeing Your Mind - Listen to us online!

WCBN is the University of Michigan student-run community freeform radio station in Ann Arbor, Michigan. We broadcast at 200 watts to the University and its surrounding communities from the basement of the Student Activities Building in downtown treetown. We have been broadcasting a genre-less overview of music, news, and public affairs for over 25 years.

WCBN's musical format is freeform, with some specialty shows. Freeform involves all different kinds of music, including jazz, reggae, blues, hip-hop, country, rock, and just about everything else under the sun. Instead of telling our DJs what to play, we allow them to select their own recordings from our vast and unique library. It is their responsibility to mix together many different kinds of music in an intelligent fashion, and show links between musical genres.

Click here to listen to our live WCBN-FM Ann Arbor RealAudio broadcast!

Correct on that count.

The depth of the non-currents balanced the tight rotation of the top currents. At one point, #1 was scheduled to play every 65 minutes.

Having worked in news/talk through most of my career, I don't QUITE
have the same story (though I did overnights at a country/rock
station, and some of the longer tunes allowed me to hit the Coke
machine next door and across the parking lot from the studios ;). But
I think I have an odder story...

It was 1990. I was news director and afternoon talk host for a small
talk radio station in Northeast Ohio, entirely locally programmed.
(The facility is now religious/sports WANR-AM 1570 in Warren, OH.)

The station's home, literally a former farm house just south of town,
caught fire in an arson that to the best of my knowledge, still hasn't
been solved. After that fire, we operated from...believe it or not...
a pizza concession trailer. You know, the metal boxes you see at the
county or state fair. Complete with pizza oven...which I suppose would
work if we'd had a gas hookup in the parking lot of the station ;)

The bathroom was indeed a porta potty next to the now-gutted building,
right behind the pizza trailer. To take a long break... we had no
automation and no network news for at least the first week or
two...and remember, the station was entirely locally programmed! (We
eventually resumed our CNN Radio feed with a home receiver hooked to
the satellite dish that still stood out in back of the old building.)

So...I excused myself...and ran one cart that had the station's theme music on it. The music could probably best be described as "late disco/porno movie theme", and came from a production record from the late 1970's. We only still had it after the fire because a certain news director/PMD talk host had a cassette copy of it in the back of his car ;)

Anyway...the cart was recorded at a station across town, as a favor to us... and the rickety borrowed cart machine we used in the pizza trailer for some reason neglected to pick up the stop/start tone on the cart. Soooo...the theme looped, with a few seconds of silence in between each play. ;) And I got to take my bathroom break...

Mike

1961. New STAGE LEFT avaailable on line: "On Broadway"

Newsgroup: rec.radio.broadcasting
Date: 2001-04-27 14:14:09 UTC
From: thedoge@swbell.net
Message-ID: <teivlh6vu6aj58@corp.supernews.com>
Source record: 14522
Cross-posted to: rec.arts.theatre.misc,rec.arts.theatre.musicals,rec.radio.broadcasting,rec.radio.noncomm,stl.general

STAGE LEFT is a weekly mix of music, comedy and spoken word produced at KDHX-FM in St. Louis. Listen to it any time with RealPlayer at http://www.stageleft.org or http://www.kdhx.org/listen.htm

The latest edition of the STAGE LEFT webcast went on line Wednesday (April 25). This week the subject is "On Broadway". The show features music from three recent Broadway shows: "The Producers" (music and lyrics by Mel Brooks, based on his 1968 comedy classic and a BIG hit with audiences and critics alike), "Aida" (Elton John and Tim Rice; a tour of the show opens a ten day run in St. Louis on 4/27), and "The Seussical" (Stephen Flaherty and Lynn Ahrens, based on poems and characters of Dr. Seuss). And, of course, news headlines from The Onion.

You can also get both the current episode of STAGE LEFT and previous weeks' shows at http://www.stageleft.org or http://www.kdhx.org/listen.htm The play list is at http://www.stageleft.org/010425.html We'll be archiving a month's worth of shows.

Next Week (5/2): "From the Sound Stage" - recent film music releases, including the first ever recording of John Barry's score for the 1971 cult hit "Walkabout", "Enemy at the Gates" (James Horner), and a two-disc set of music by Jerome Moross ("The Cardinal", "Seven Wonders of the World" and others).

Actually I did download the most recent version (1.00.090) and it does not upload playlists from a music scheduler. If you go to that option on the menu bar, it says "this feature will be available in the next upgrade" and their website says the same thing.

They also don't say when this version will be available.

However, I have discivered that after running OTSJuke on my main PC for a few days, it's not going to work. The program is too much of a demand on the hard-drive, taking away my ability to do other multitasking.

So now I'm going to have to think about moving it to another PC... Ahh well, I should have known. :)

I have two carts machines for sale ITC Triple Deck and a BE Rec/Play
single.
Also have a CD Player and Pyramid DJ Mixer.

Details are on the classifieds at http://www.productionroom.com.

The Production Room is back online with classifieds, links and great
voice work.

Please check it out.

Dan Ingram was IMO the best radio personality there ever was. In those days there was a lot of talented radio people, but he was always my favorite and was one of the people who got me addicted to DXing myself.

Radio wasn't so "pastuerized" in those days either! Today's radio programming reminds me of "Soylent Green"!

There was "Bottle of Wine" By the Fireballs, "Bread and Butter" by the
Newbeats, "Do it again just a little bit slower" by Jon & Robin and "Western
Union" by the Five Americans are a few that come to mind... The last two
from the old "Abnak" label that looked a lot like the old yellow and black
"Atlantic" label of the fifties. The "A" on both labels looked like this:

Yes, and has EQ and processing built in. The crossfading is pretty smooth
for a single sound card too.

1973. New STAGE LEFT avaailable on line: "On Broadway"

Newsgroup: rec.radio.broadcasting
Date: 2001-04-29 14:31:11 UTC
From: thedoge@swbell.net
Message-ID: <teo9dfksmd583d@corp.supernews.com>
Source record: 14534
Cross-posted to: rec.arts.theatre.misc,rec.arts.theatre.musicals,rec.radio.broadcasting,rec.radio.noncomm,stl.general

STAGE LEFT is a weekly mix of music, comedy and spoken word produced at KDHX-FM in St. Louis. Listen to it any time with RealPlayer at http://www.stageleft.org or http://www.kdhx.org/listen.htm

The latest edition of the STAGE LEFT webcast went on line Wednesday (April 25). This week the subject is "On Broadway". The show features music from three recent Broadway shows: "The Producers" (music and lyrics by Mel Brooks, based on his 1968 comedy classic and a BIG hit with audiences and critics alike), "Aida" (Elton John and Tim Rice; a tour of the show opens a ten day run in St. Louis on 4/27), and "The Seussical" (Stephen Flaherty and Lynn Ahrens, based on poems and characters of Dr. Seuss). And, of course, news headlines from The Onion.

You can also get both the current episode of STAGE LEFT and previous weeks' shows at http://www.stageleft.org or http://www.kdhx.org/listen.htm The play list is at http://www.stageleft.org/010425.html We'll be archiving a month's worth of shows.

Next Week (5/2): "From the Sound Stage" - recent film music releases, including the first ever recording of John Barry's score for the 1971 cult hit "Walkabout", "Enemy at the Gates" (James Horner), and a two-disc set of music by Jerome Moross ("The Cardinal", "Seven Wonders of the World" and others).

I used to think that automation was the great evil that ruined radio for me (when I wanted to become a DJ), then I discovered it was something else. It's BORING! Let the automation do it!

It would have been a rippin' blast to be a DJ back in the 50s, 60s or 70s when the music was hot and their was a little more magic in the air. But now? Foul rappers, 5 minute teen sensations, little boy bands. PLEASE! Gag!

And then their is talk radio. Now a deflated tire with Clinton gone (come on, Bush isn't that much fun to pick on, admit it).

With little or nothing left, I am absolutely 100% satisfied with being a producer and never being a DJ ever. Why? What's left?

The Yahoo! Broadcast link to KHRO (HERO Radio's flagship station in El Paso) states that it is indeed legal questions as to the broadcast of commercial advertisements (argument with AFTRA) that has caused them to cease streaming online... they advise that when this issue is resolved they will be back...

My question here is:

Why does it make a whit of difference? When the "actors" that make these commercials are hired, I'm pretty sure that they are paid scale.. The advertising companies have bought the rights to those spots.. they "sell" the spots to sponsors, who buy time from the media, who put them before the public.... I can see no issue here.. seems to me that the sponsors want their product to be known over as wide a possible area as they can for the least amount of outlay... Color me confused....

Conceptually, that sounds kind of like the "interval signals" played on verious shortwave broadcasters as they are warming up their transmitters before the actaul programming starts. They give listeners something they can identify to tune in to.

On the topic of skipping records on the air, I had heard one story (don't know if it is true or not) of a board operator at a religious station who had to play a program once a week that was syndicated on vinyl. He would start the program, get in his car and go to a pub nearby for a quick drink before returning to the station 1/2 hour later to start another program.

It seems that one evening, as he was returning to the station, he pulled in right behind the pastor who ran the station, who was very irate and wanted an explanation. When the operator re-entered the station, he found that the record had started skipping, and for the past 15 minutes had been playing, in the very slow, deliberate, and loud tone of a preacher from a charismatic denomination, "go to hell.... go to hell.... go to hell.... go to hell...."

Actually I did download the most recent version (1.00.090) and it does not upload playlists from a music scheduler. If you go to that option on the menu bar, it says "this feature will be available in the next upgrade" and their website says the same thing.

They also don't say when this version will be available.

However, I have discivered that after running OTSJuke on my main PC for a few days, it's not going to work. The program is too much of a demand on the hard-drive, taking away my ability to do other multitasking.

So now I'm going to have to think about moving it to another PC... Ahh well, I should have known. :)

Having worked in news/talk through most of my career, I don't QUITE
have the same story (though I did overnights at a country/rock
station, and some of the longer tunes allowed me to hit the Coke
machine next door and across the parking lot from the studios ;). But
I think I have an odder story...

It was 1990. I was news director and afternoon talk host for a small
talk radio station in Northeast Ohio, entirely locally programmed.
(The facility is now religious/sports WANR-AM 1570 in Warren, OH.)

The station's home, literally a former farm house just south of town,
caught fire in an arson that to the best of my knowledge, still hasn't
been solved. After that fire, we operated from...believe it or not...
a pizza concession trailer. You know, the metal boxes you see at the
county or state fair. Complete with pizza oven...which I suppose would
work if we'd had a gas hookup in the parking lot of the station ;)

The bathroom was indeed a porta potty next to the now-gutted building,
right behind the pizza trailer. To take a long break... we had no
automation and no network news for at least the first week or
two...and remember, the station was entirely locally programmed! (We
eventually resumed our CNN Radio feed with a home receiver hooked to
the satellite dish that still stood out in back of the old building.)

So...I excused myself...and ran one cart that had the station's theme music on it. The music could probably best be described as "late disco/porno movie theme", and came from a production record from the late 1970's. We only still had it after the fire because a certain news director/PMD talk host had a cassette copy of it in the back of his car ;)

Anyway...the cart was recorded at a station across town, as a favor to us... and the rickety borrowed cart machine we used in the pizza trailer for some reason neglected to pick up the stop/start tone on the cart. Soooo...the theme looped, with a few seconds of silence in between each play. ;) And I got to take my bathroom break...

Mike

Correct on that count.

The depth of the non-currents balanced the tight rotation of the top currents. At one point, #1 was scheduled to play every 65 minutes.

We used to listen to it all the way beyond the Mac, where the signal dropped out, when we went to Canada or the UP on fishing trips. That was on old AM-only car radios... I've heard WTAC in Wexford county (Mesick) several times at night before on an old Realistic DX60 portable radio from the late 70's. You had to turn it just right to catch the signal. I will say that KSJB *did* give them a good run-around. I don't remember ever hearing them there during the day though...

I've always liked Orban products, up until the digital started. Ran in "protect" mode, they sound great. I never cared for the sound of the multiband units, even at light levels of compression. There's something that just sounds "off" about them. When they're set up in the typical abusive fashion, they sound detestable! The old analog units still had a "musical" quality to them even at high levels of gain reduction, where the digitals seem to have a very distinct "plastic" sound quality, especially true with the multiband units.

1983. radio news themes/station ID's

Newsgroup: rec.radio.broadcasting

There are many websites with TV news themes, but I can't find any sites with wavs
of radio news themes, or wavs of sounders where the ,,computerised voice set to instrumentation" (I'm not sure the technical term of that) sings the call letters, or plain vocal id's, or any sites with any stuff like that. Anyone who knows a website with radio sounders (a whole site, not just one or two wavs) please help. Thank you.

Hello!

I'm looking for an old Urei compressor made in the mid to late 70's, model LA3A. Please let me know if you have any of these in your storage area or the "no longer needed" rack, and I'll give it a new home. Please email me at Tonengineer@aol.com or call (301)-513-9494. Thanks very much!

Tony

>Why does it make a whit of difference?<

Because AFTRA and SAG have a binding labor agreement with ad agencies, stating that for commercials recorded using union talent that are streamed on the Internet, the talent will be paid a fee equal to 300% of their regular session fee.

That adds up rather quickly.

Ironically enough, the bathroom break "record of choice" at my first station was Robert Plant's "BIG LOG!"

Naturally, I looked for the longest song...and, at 5+ minutes on the 45, this one took the prize in late 83-early 84!

Folks,
I've been reading your thoughts and would like to add some of my own. I started in broadcasting in the Phoenix market in the summer of 1966. There was an AM FM combo at the shopping mall that was on the verge of financial failure. The back door to the studio was next to the men's room at the mall. Often in the summer, the door would be blocked open, to enable cool air from the mall to enter the studio. It would be several days until the owner could get the cash to have the ac repaired. I started to hang around the studio, with the night jocks approval. I met the engineer and other dj's as time went on. My parents would drop me off at the mall in the morning and pick me up on their way home. I was allowed to spend the day hanging around an learning. I'd pick up lunch for a jock or salesman at the deli and the would buy me lunch for the favor. By the end of the summer I was offered the Segue Serenade shift on Saturday and Sunday evenings. I worked there through the end of high school and the first year of college. Today this would not be allowed. There were several times the GM took me to the transmitter to repair it, because I was not allowed to get my license yet. I did not feel taken advantage of....in hindsight I could not have gotten a better education. Although I paid for college as a jock, I found it was engineering I liked the best. I am still in touch with several of the announcers to this day. There is no way for youngsters to get this start today. Most radio TV courses at college have little to do with the real world. They have not encompassed the changes we've all seen in the last five years. Television is beginning to follow radio with the trend to centralcasting (running several stations from one M.C. in another city) If there is a broadcasting business in the next ten years, its business model will be far different than the one we know today. Its sad.

The Doors' "Light My Fire" was around six minutes' in length - but most kiddie-rock-top-40 stations ran an abbreviated version which eliminated most of the organ instrumental riff in the middle. Graveyard shift DJs could roll the longer version and take a six minute break.

Overnight DJs used to sometimes put on a tape so they could take a break as well. I can remember when I was in high school (mid-60s) and as a 15-year old was hit with chicken pox. So I used to listen to Dick Summer on WBZ during those sleepless nights and heard him do the same lengthy prose recitations a few nights in a row.

Maybe I can offer an answer. Union talent are paid for both the session and degree of exposure. Talent fees for a spot that runs in Washington DC are about half that for the same spot if it ran in NYC. Larger audience, more money.

Streaming on the internet is an additional exposure because more people are hearing the spot. That exposure must be compensated. Think of it this way; You hire a painter to paint your living room for a set fee. Afterwards, you say, "Hmm I really like the job you did and the color of the paint is great! Why don't you do the hallway and dining room?"

The painter gets more for actually doing the painting, but in radioland the spot is already cut and no additional work is required. However, obviously, you'll need more paint. When a spot is produced for broadcast in a market (or markets) and then runs on the internet, that's additional exposure.

But they also get extra pay based on the usage of the spot. There's additional pay if the spot is aired over a longer period, higher rates for national commercials, etc.

I happen to believe that the 300% surcharge is excessive in the case of either (A) national commercials or (B) local spots that have no value outside a single market. I just don't see that much added value to the advertiser to justify that rate. My gut feeling is that this is an effort to persuade advertisers to record separate commercials for webcasting rather than use existing radio spots. (Note that the AFTRA contracts forbid reuse of TV commercials on radio, except where a program is being simulcast on radio and TV in the same market. When Fox started The Late Show With Joan Rivers they placed it on radio in Boston until their deal to buy a TV station there went through, and they had to cover up all the network spots because of this clause.)

"The advertising companies have bought the rights to those spots.. they "sell" the spots to sponsors, who buy time from the media, who put them before the public...."

Right, but either (A) the sale contract obligates the buyer (the sponsor) to follow the AFTRA rules, which is almost certainly the case, or (B) it does not in which case AFTRA would probably go after the agency for breaking the contract.

I am not sure that this makes any sense. The output power of a digital
transmitter has absolutely nothing to do with the "loudness".

The problem is, the radio stations are NOT being compensated by the
advertiser for net streaming, but AFTRA expects the _radio stations_
to compensate the talent. This turns the business model on its head
and stations just won't do it. So the streams are coming down until
software is installed to strip out the spots.

People have got to understand that net streaming by radio stations is
not a business, it's a promotional tool for the business. which is
still ON THE AIR, hype to the contrary notwithstanding. The number of
actual listeners to net streams is so small as to be not worth
considering by advertisers.

1996. RE: ONE SONG AT A TIME: TALES FROM THE KERRVILLE FOLK FESTIVAL

Newsgroup: rec.radio.broadcasting
Date: 2001-05-01 17:33:20 UTC
From: Joe Bevilacqua <joebev@nospamaustin.rr.com>
Message-ID: <tetsr06psgnjf6@corp.supernews.com>
Source record: 14457

Hi all,

FYI.

Thought you might like the heads up on my latest special (from the guy who brought you "Lady Bird Johnson: Legacy of a First Lady")...
It is a one-hour sound portrait that takes the listeners on a camping trip during the Kerrville Folk Festival. I recorded it on location at last year's
festival. In addition, there are ten short modules that contain content different than what is on the one-hour documentary. This May marks the 30th anniversary of the festival.

Below is the info. that will be up on the DACs:

TITLE: ONE SONG AT A TIME: TALES FROM THE KERRVILLE FOLK FESTIVAL

SUGGESTED USE: Anytime (Note: This year's festival begins on May 24th and runs through June 10th.)

SATELLITE FEEDS: Thursday, May 10th, 1200-1344 ET, A71.9S.

ID #: 01-000-01301

LENGTH: Documentary - 59:00; plus ten modules between 3:00 and 4:15 in length
(Note: The modules contain unique material not found in the documentary.)

RIGHTS: Unlimited through 5/3/03. STATION MUST NOTIFY KUT BY MAILING OR FAXING THE FORM BELOW BEFORE BROADCAST. Stations may stream the program simultaneous with its radio broadcast. Archiving the program on the web is not permitted.

FEES: Free to all interconnected stations.

PROMO: Fed at end of documentary feed following 5 seconds of silence. One 30-second promo (24-seconds promo, 6-second music for local tag).

LISTENER COPIES: Copies are available on compact disc for $12.00 (in Texas, $12.99) by calling 1-800-435-8836.

ONE SENTENCE DESCRIPTION: One Song at a Time: Tales from the Kerrville Folk Festival is a one-hour radio documentary, hosted by NPR's John Burnett, in honor of the thirtieth anniversary of the festival.

DESCRIPTION: Every spring, just outside the sleepy hill country town of Kerrville, Texas, at a place called Quiet Valley Ranch, something

extraordinary happens. Like the mythical "Brigadoon," a city appears out of nowhere. Five thousand campers will pitch tents, light campfires, strum guitars, and create, for 18 days in May and June, a community called the Kerrville Folk Festival.

The year 2001 marks the thirtieth anniversary of the Kerrville Folk Festival, one of North America's longest-running open-air music events. In honor of this, KUT Radio is presenting a one-hour sound portrait called "One Song at a Time: Tales from the Kerrville Folk Festival.

Over the years, the festival has been fertile ground for such emerging and established artists as the Dixie Chicks, Townes Van Zandt and Mary Chapin Carpenter. The festival's "New Folk Competition" has also been a launching pad for many new singer-songwriters, such as Lyle Lovett, Tish Hinojosa, Butch Hancock, Nanci Griffith, and Jimmy LaFave.

Musicians and music lovers come from as far away as Ireland, part of the 30,000 who attended the event last year. But the Kerrville Folk Festival is more than just a series of outdoor concerts, it's a culture, an alternate reality, and a way of life.

Producer Joe Bevilacqua has created a one-hour sound portrait which lets the radio listener experience this Texas tradition first hand: the music, the people, the rain, the all-night "picking" parties, and the stories from onstage, backstage and around the campfire.

"I really tried to capture the feeling of being there. Listeners can expect to be transported to the Kerrville Folk Festival," say Bevilacqua, who recorded the program on location at the 29th annual festival and camped out through the mud, rain, cold showers, and 100 degree heat. He talked with veteran campers such as Javier Cortez, who has attended every festival since 1972, Dyanne Fry Cortez, author of a book of Kerrville stories, and longtime volunteers such as Vern Crawford and Lenore Langsdort, who met and married on the festival grounds.

The program also features festival founder Rod Kennedy, who talks about how it all started and what impact it has had. Bevilacqua explains, "The title of the show comes from something Rod said to me during our interview, that at Kerrville they are trying to change the world 'one song at a time.'"

In addition, there are live performances by Reggie & Kim Harris and Magpie, Hugh Blumenfeld, Terri Allard, Lisa McCormick, the Red Dirt Rangers, Ronny Cox, Peter Yarrow and others. Plus, KUT's own Howie Richey gives listeners an audio tour through the festival grounds.

Bevilacqua admits, "When I arrived at Kerrville, I was a Kerrvirgin. While I was there, I became a Kerrvivor. And I left a Kerrvert."

MODULES: There are ten modules unique from the documentary. The modules will follow the documentary/promo and begin at 1:01:00 into the feed.

1. Kerrverts (3:34) The special language of Kerrville.
2. Camping with Christ (3:25) Secular humor at the festival.

3. Amram Jam (3:21) Folk-jazz artist David Amram merges musical genres.
4. Bill & Vern (3:22) How one newcomer got kerrverted.
5. The Magic of Kerrville (3:59) What makes the festival so special.
6. Kamp Quisine (3:23) Feeding the musicians.
7. The Geography of Kerrville (4:03) Texpert Howie Richey tours the festival landscape.
8. Volunteers (3:28) Three personal stories of Kerrville.
9. Camp Cooking (3:09) A reading from the book "Hot Jams and Cold Showers" by Dyanne Fry Cortez
10. Song Circles (4:15) Music around the camp fire at 3:00am.

As much fun as it is to pick on Chuckie, he's actually kinda right about this one. It's KYET in Williams, and I was there just last week. Even caught 'em on tape with their hourly announcement asking listeners to call the Williams City Council and complain.

No, the council can't force KYET off the air -- but they CAN kick the station's transmitter off the city-owned property where it sits, and that's apparently what they plan to do. Not sure of the exact nature of the dispute, but apparently the city has other plans for the land (right behind the city rodeo grounds!)

Of course, KYET's committment to the community has gotta be somewhat questionable, considering its studios are two hours down the road in Kingman...

WCBN WILL DESTROY YOUR FEEBLE FORMATS

WCBN - Over 25 Years of Freeing Your Mind - Listen to us online!

WCBN is the University of Michigan student-run community freeform radio station in Ann Arbor, Michigan. We broadcast at 200 watts to the University and its surrounding communities from the basement of the Student Activities Building in downtown treetown. We have been broadcasting a genre-less overview of music, news, and public affairs for over 25 years.

WCBN's musical format is freeform, with some specialty shows. Freeform involves all different kinds of music, including jazz, reggae, blues, hip-hop, country, rock, and just about everything else under the sun. Instead of telling our DJs what to play, we allow them to select their own recordings from our vast and unique library. It is their responsibility to mix together many different kinds of music in an intelligent fashion, and show links between musical genres.

Click here to listen to our live WCBN-FM Ann Arbor RealAudio broadcast!

Robert... you don't mention if you are presently operating a music scheduling program... Might I point out that Audio Vault, presenly in the $30,000-$6-,000 price range, ALSO does not give you the ability to 'multitask' as you put it, because it is a proprietary and stand-alone option for what you are looking for. For the price of $99.00, and a little patience and forethought, I'm sure you will find OTSJuke a far superior product to anything else on the market for that $$. I have personally installed OTSJuke in several radio stations in the New York market, and THEY seem to find it operationally appealing... how is it Texas hasn't caught on yet?

>Actually I did download the most recent version (1.00.090) and it does not
>upload playlists from a music scheduler. If you go to that option on the menu
>bar, it says "this feature will be available in the next upgrade" and their

The link is no longer available, use this one
http://www.usatoday.com/life/cyber/tech/2001-04-23-net-radio.htm
I'm sure an agreement will be easy to find, because with net-radio you know exactly how many listerns you have. Actor royalties and advertisement price can be compute in real time !

That's right the radio I regularly listen to (KFOG morning show) is less attractive with no advertisement.

Remi from Chambery, France.

Cross-posted to: alt.radio.broadcasting,rec.radio.broadcasting

I'm upgrading my PC at home, and will have a motherboard with on-
board sound (Epox 8KTa3).
Would I be better off continuing to use my current sound card
(Creative Ensoniq) which has done a pretty good job for me in spite of
it not being "professional" quality, or using the motherboard's built-in
sound feature? I use the sound card primarily to archive records and
tapes to CD and some limited voice work using a Sennheiser mic and
JoeMeek Mic processor.
I don't have motherboard sound specs yet for a direct "quality"
comparison between the two options -- hopefully the specs are included
in the Motherboard documentation because I can't find them on-line.
Quality issues aside, I'm also curious about Motherboard sound and
its demand on the CPU as opposed to a PCI sound card.

Nope, that's not the way it's happening.

It's the ad agencies who are liable for the payments, and it is the ad
agencies that are requesting/requiring radio stations to remove
agency spots from their streamed broadcasts.

Druid,

Thanks for the reply.

Yes I use MusicMaster Music Scheduling Software from A-Ware. Currently I am able export playlists from MusicMaster to a consumer based CD Jukebox control system called "Wintrax". This is also a low-cost system and you can find out more about it by going to www.cdcontrol.com.

The computer controlling Wintrax is dedicated, but the hard drive storage space isn't large enough to support my current library (it's whopping 3 GB drive with only about 1 GB left). I can indeed install a larger hard drive for it, but I would like to wait until OTSJuke can better serve my needs before I do.

The reason I don't want to use OTSJuke yet, is because it cannot import music lists such as those made from MusicMaster.

While I do realize OTSJuke "can" build its own lists, these lists do not follow my programming philosophy for my Internet station at Live365.com

I like a lot of things about OTSJuke, particularly the ability to use short MP3's like Jingles, etc...But until OTSJuke "can" import playlists from MM, I would rather stay with the current Wintrax program that I already have.

The OTSJuke website states that a future software upgrade will be able to import such playlists, but they don't yet say when this update will be released. I will keep an eye on it.

Thanks again!

Are you sure you want to go there? Radio advertising itself is not a
business for most of the folks buying it, it's a promotional tool for their
business. But this does not entitle the advertiser to freebies from
broadcasters or others along the value chain.

Nope, the argument is with the ad agencies who would be the ones who
would have to pay the AFTRA performers. It was the agencies that
agreed to the 300% rate; nothing was forced on them.

2008. Review: National tour of "Aida" at the Fox Theatre, St. Louis

Newsgroup: rec.radio.broadcasting
Date: 2001-05-02 04:23:35 UTC
From: thedoge@pobox.com
Message-ID: <tev2u7hc4a9da1@corp.supernews.com>
Source record: 14469
Cross-posted to: rec.arts.theatre.musicals,rec.arts.theatre.plays,rec.radio.broadcasting,rec.radio.noncomm,stl.general

In the Elton John and Tim Rice musical "Aida", the national tour of which is playing the Fox Theatre in St. Louis through May 6th 2001, the triangle and its three-dimensional extension the pyramid are recurring images. That's appropriate for two reasons: first, the dramatic heart of the show is that old standby the romantic triangle and second, "Aida" is an effective but superficial musical that only occasionally takes on that third dimension.

As in the 1871 Verdi opera on which it's loosely based, "Aida" is the story of the Egyptian captain Radames who, although pledged to marry the Egyptian princess Amneris, falls in love with the captured Nubian princess Aida, with tragic results. That's about all that survives from the original, however. Even the tragic ending, with Aida and Radames condemned to death by being sealed in a tomb, is given a happy wrapper by way of some mumbo-jumbo about reincarnation. This is a Disney show, after all.

That doesn't mean it's for kids, though. Despite moments of comic relief like the colorful production number "My Strongest Suit", a somewhat irrelevant parody of high fashion in which Nile Valley Girl Amneris revels in her own superficiality, "Aida" is fundamentally a dark story of mistaken love and conflicting loyalties played out against the bright, highly saturated colors of Bob Crowley's sets and costumes. Even the dramatic lighting design, by Natasha Katz, makes creative use of darkness as well as illumination.

In fact "Aida", like a lot of recent musical theatre, is all about the Big Gesture. Simone's performance in the title role is the perfect illustration of this. When she takes center stage in dramatic solos like "Easy as Life", in which she laments the hard choices she must make to save her father, her larger-than-life performance and soaring vocals command attention. Like everything else in the show, including Wayne Cilento's highly eclectic choreography, it skirts the boundary between high drama and high camp without ever slipping over.

David Cassidy's Radames operates on the same level of intensity. His duets with Simone generate an appropriate amount of heat and their reprise of the ballad "Enchantment Passing Through", as they're sealed inside the pyramid, may actually bring a lump to the throat. It's as close as the show ever gets to real emotion. There's also great work here from Kelli Fourneir as Amneris, convincingly making the transition from airhead to sadder but wiser heir to the throne.

Amneris is the only character with any real depth, however. For all their passion, Radames and Aida didn't seem terribly real to me and the

production as a whole struck me as slick, entertaining, but ultimately a bit empty - rather like a two-dimensional triangle trying to become a three-dimensional pyramid but never quite succeeding.

Locally-produced, in-house spots are not covered by any AFTRA/SAG
agreement. A station announcer-produced spot can run forever on a
webcast without any compensation to the performer.

Mark,

Sorry, your statement is just not true. AFTRA does NOT expect payment from the stations. The payment must come from the ad agencies and/or production companies who hired the talent. It is part of the contract signed last year between the talent and the advertising agencies. The radios stations have nothing to do with it.

Regards,

Ty Ford

Depends on the station's contract. There are cases where the talent on
an in-house spot must be paid if the spot runs outside their own show.
If the advertiser wants to run the spot on another station they have
to be paid more. This often happens on Talk stations. To avoid that, a
staff announcer is used to alow the spot to run anywhere on the
station. With a staff announcer you can't charge a premium for the
spot that you could with the Talk Show Host endorsing the product.
That's usually a conbination of the personality's personal contract in
addition to the station's AFTRA agreement.

Rich

It appears that advertising agencies don't consider the Internet to be
a viable (worth paying for) advertising medium.

Or, like other media, agencies, producers, stations, etc. don't like
paying talent based on where a spot is used. The producer's attitude
is that "you did the spot, now we own it" and can do whatever we
please with it.

I've been in situations where I've had to get permission to use
something from the estate of the talent. Imagine what would happen if
a TV station ran a movie without gathering all the rights to use it. I
see no difference between the rights of dead performers and those of
announcers and other radio performers trying to make a living.

I'm very tired of the Internet argument that they shouldn't have to
pay for anything on the premise that it's a developing medium and
making them pay for material they use will kill the medium. If that's
the case, kill the medium.

I think what's causing the problem is the 300% figure. Unions often
don't understand new technologies. I remember a TV network negotiating
with a union about non-linear editing. The union didn't understand
what it was and allowed jurisdiction over it to pass to another
department. Now it's all non-linear. Years ago I was told by an IBEW
member that playing records on the air wasn't possible. After all,
acetates couldn't be played that many times. He had no concept that we
were playing vinyl.

Still, the bottom line is that performers want to be paid for their
work. Since they won't share in the future profits there's no reason
they should take the economic hit that free Internet use will make. If
they don't take a stand now, they'll never get it when there are
profits.

Rich

It OCCASIONALLY takes on a third dimension? So, they've
improved the show since Broadway? :)

Terry has a good point about the potential of destroying a medium before it's even fully built, but the medium is quite a bit stronger than many would believe. While there may be some stations out there that only capture "seven or eight" people through their webstream, many stations -- both terrestrial and internet based -- are having TREMENDOUS success capturing a HUGE listener base. The additional exposure (for both the station itself and its advertisers) is so powerful, even Arbitron has gotten involved. If you haven't seen it already, check out their Sept/Oct 2000 report. Click on the link below, then select "Beyond the Ratings" under "Current Survey Information and Publications". It talks about the power of internet exposure.

http://www.arbitron.com/radio_stations/home.htm

There are a couple of radio-over-the-internet reports available on their site that are pretty eye-opening.

While the amount that was agreed on to pay talent for internet-broadcast commercials may be higher than many expected, it's what was agreed on. And as heated and tense as the commercial contract negotiations were, I don't believe the Ad industry would have agreed to something they didn't think was practical. As advertisers realize the power and exposure an internet ad can bring to their product, I believe that for them the cost will end up practical in relation to the benefits the advertising will bring. At least that's the idea, right? :)

Here's to the future! :D

2018. New STAGE LEFT episode on line: "From the Sound Stage"

Newsgroup: rec.radio.broadcasting
Date: 2001-05-03 23:46:01 UTC
From: thedoge@pobox.com
Message-ID: <tf3rdpd1hvdq30@corp.supernews.com>
Source record: 14479
Cross-posted to: rec.arts.theatre.musicals,rec.arts.theatre.plays,rec.radio.broadcasting,rec.radio.noncomm,stl.general

STAGE LEFT is a weekly mix of music, comedy and spoken word produced
at KDHX-FM in St. Louis. Listen to it any time with RealPlayer
at http://www.stageleft.org or http://www.kdhx.org/listen.htm

The latest edition of the STAGE LEFT webcast went on line Wednesday
(May 2). This week the subject is "From the Sound Stage". The
show features music from recent film music CDs: "Enemy at the
Gates" (score by James Horner); "The Cardinal - The Classic Film
Scores of Jerome Moross"; the first recording of John Barry's
score for the 1971 cult favorite "Walkabout" (along with selections
from Barry's score for the 1972 film "They Might Be Giants");
"Bond Back in Action II" (music from recent Bond films); and
"The Mummy Returns" (opening everywhere May 4th, like it or not).
And, of course, news headlines from The Onion.

You can also get both the current episode of STAGE LEFT and previous
weeks' shows at http://www.stageleft.org or http://www.kdhx.org/listen.htm
The play list is at http://www.stageleft.org/010425.html We'll
be archiving a month's worth of shows.

Next Week (5/9): "Crime and Punishment, Part 1 - The Stage"
- first of a two-part series on crooks, cops and private eyes.
Look for music from "Baker Street", "City of Angels", "Oliver",
"Guys and Dolls", "Bells are Ringing", "Nick and Nora", "The
Mystery of Edwin Drood" and "Les Miserables" among others.

As an AFTRA member, I was a proponent of establishing a rate based on the connection capacity of the server, but keeping accurate track of several thousand broadcast facilities' servers seemed logistically impossible.

I think the historical evidence that put AFTRA way behind when cable developed has as much to do with the rate.

The again, looking at a specific job, the talent portion of most media campaigns is usually .01 to .05 percent of the total cost of the campaign if you include creative, production and media.

And while the AFTRA Commercial contract says there's no exclusivity for talent work done on radio spots, agencies DO have the right not to use a talent because they are doing work for another client. Unlike a radio station that can play back to back spots by competing advertisers, that unenforced exclusivity limits the number of jobs a talent can take, thereby reducing their possible income.

I stand corrected.

This does not change the absurdity of expecting the radio stations to
pay. If the ad agencies and/or production companies hired the talent,
the ad agencies and/or production companies should pay the talent, and
not expect some other vendor to do so.

What amazes me is that Infinity is smart enough to essentially leave
THE 'RIF alone. If I remember correctly, they've driven 105.1 through
at least 4-5 formats/'subformats' since they had the gall and
stupidity to toss a historical and profitable station like WQRS.

Maybe they are smart enogh to realize that, while classical listeners
would, at most, write letters and vent, that if they were to screw up
RIF, they would LITERALLY have a riot on their hands (as in burning
cop cars, broken windows, etc.).

Of course, you never know when a tinkering moron who thinks they HAVE
to beat WJLB and WNIC might show up!

Why not go there? If streaming is a promotional tool for radio
stations, then radio stations buy streaming--as a product. If
advertising is a promotional tool for a business, then the business
buys advertising, as a product. Streaming is a business for the
people selling software and bandwidth, but it is not a business for
the radio station. Advertising is a business for the people who
create and place the spots, but it's not a business for the company
advertising its product or services.

Does this clear things up?

And what about the 50,000 watt stations? I live in Phoenix
and can listen to stations in Omaha, Oklahoma City, ect.
Are they going to make the power house stations cut their power
so that their spots can only be heard locally? What's the
difference if I listen to a station in Omaha over the net or
over the airwaves?

This reminds me of a problem I'm trying to solve.

I have a nice Sony Notebook. The problem is, the only audio input it has is a single channel microphone jack. They made no provision to feed stereo audio into the computer. I have been able to record monaural audio by padding the line level down to microphone level, but it is very susceptible to electrical noise from appliances switching on, etc.

I've tried a couple USB devices, one called the Anthony Lynn device which did nothing but lock up my system. After fighting with it for almost a week, I sent it back. The other thing I tried was a Belkin USB Videobus II. I just used the audio inputs on it. It worked, but the quality is very tinny -- hardly any bass response. It's going back to Comp USA tomorrow.

Does anybody know of another device that's less that $100 that will do the job?

I think we're talking apples and oranges, Rich. Not every station has
an AFTRA/SAG bargaining unit; not every on-air announcer has a
personal contract.

Generally speaking, where there are no contracts or there is no union,
there is no additional compensation required. Where there are
AFTRA/SAG contracts in place, in-house production which is run
in-house (or, as is becoming more common, within the same market
cluster) would not enjoy any additional compensation, either, even if
it is aired on the web. Personal contracts are a matter negotiated
purely between the individual and station management. If such a
contract requires additional compensation for production aired on
other media, then so be it -- but I bet it's not bonused at 300%.

T.K., I had to laugh when I read this. When I was doing all this
ad-libbing, I, um, was 18 years old, living at home and just out
of high-school.

So, I guess one of those horrible high-school kids demonstrated
that he had some talent, too.

(Come to think of it, the station ended up firing me in my second
go-around there, but that's another story)

That's exactly what I get out of it. In most cases today, streaming is just
a way for stations to sound "cool" and put more hooks into the audience.
That's likely to change however.

>Or, like other media, agencies, producers, stations, etc. don't like
>paying talent based on where a spot is used. The producer's attitude

What did they do right in IL?

Similar legislation failed in NC, and is slowly dying in MO.

Who is behind the bills success in IL?

Yesterdays R&R cover story:

In a voice vote, the Senate Commerce Committee of the North Carolina General Assembly turned down legislation that would have banned noncompetes in broadcasting. "This bill would have been harmful to broadcasting, and its defeat is a credit to the collective efforts of North Carolina broadcasters who worked tirelessly on this issue," says Capitol Broadcasting SVP/Broadcasting Tom Allen, who's also President of the state's association of broadcasters. The association reports that a similar law was recently enacted in Illinois and is pending in Missouri.

> ~scott~

I agree almost completely. The newer SoundBlaster cards and any of the
Ensoniq cards will do very well by you, and much better than the
motherboard sound is likely to do. I use a Creative SB Live! myself, and
it does an excellent job. Stay with your Ensoniq, and if you get another
card in the future, get either an Ensoniq or an SB Live!.

I had previously used a Creative SB16, and that had a really bad S/N
ratio... so bad, in fact, that Creative was too ashamed to publish it on
their website--the spec page shows "N/A" for that card.

>over the airwaves?

It's a different medium. It has nothing to do with where it can be
heard. There are different rates for radio, TV, Film, Radio Networks,
TV Networks, Cable, Video, live presentations and the Internet.

Union talent gets paid based on where it's used, how often and for how
long. In fact, a 50,000 watt station may already pay more for in-house
talent because of its station contract. The 50,000 watt station
probably also has personal contracts with their talent that calls for
all sorts of extra fees and a piece of the revenue passing through
their shows. I know of many 5,000 watt stations with the same deals.

Probably not. It's also not usually granted for a full year's use like
the AFTRA 300% figure is.

Mark, I think we're agreed on the semantics of this. Actually I envisioned a few exceptions. You'll notice that many Time-Life ads have disclaimers that they're not presented by Time-Life but by third-party marketing companies. These companies typically neither make the stuff nor ship it nor even create the spots. It would be fair to say they're literally in the business of buying TV ads and taking orders on commission rather than promoting themselves or Time-Life or moving a tangible product per se. Similarly for most religious advertisers; their goal is not to get you into the church door but to persuade you to send cash in response to a radio appeal.

I understood your position to be that, since webstreaming is at present only a promotional tool for radio, union talent and other factors of production should relax their compensation demands. But of course webstreaming may prove to be a promotional necessity. It's a very powerful thing for an information brand to be able to say "listen to us at your desk or anywhere in the world via the world wide web." And if stations feel they have to do it, those who control the rights are at quite an advantage. Some may feel it unfair, but it isn't blood from a stone, it's blood from an artery, exactly as broadcasters extract.

From the sounds of the discussion though, this is may be a brief disruption, a glitch between agency and talent. When you purchase an ad in the Yellow Pages, you indemnify the Yellow Pages for offenses such as misuse of a third-party logo. Similarly ad contracts between agency and stations will have to contain an agency warranty that rights to all talent and content have been secured both for radio and the web. Or if rights have been secured only for radio there's a splitstream technology and cost penalty. It will probably come down to a checkbox on the broadcaster's traffic screen. Easy stuff in the scheme of things.

Having the soundcard on the motherboard should not make a difference in the CPU loading. In most cases, the soundcard chips are connected straight to the PCI bus in the computer, they just don't go through the connectors on a PCI card. It's just a PCI soundcard without being on a PCI card in a PCI slot. The chief drawback of being on the motherboard is that more electrical noise *can* get picked up. I have a Creative Ensoniq motherboard soundcard (on a Gateway PC), and it works well for me in recording tapes, records. I found that with the no input, the soundcard picks up about -60db worth of noise. As far as specs go this is "pretty bad" but in reality for recording old tapes, records, etc. it is way more than adequate because tapes probably have a noise floor of -40db best case, records more like -30db. The soundcard won't make anything worse at all since it is far quieter than tapes and records are.

I say try the motherboard card and evaluate if it is satisfactory. One program I would highly recommend is Cool Edit 2000 for doing the recording. This program is expensive about $70 to register but is worth it. It has a very useful decibel meter which can be used to check the noise level of your connections and record level (ideally record level should peak at about -3 to -4db). Also can generate high quality MP3's at almost any bit rate. About the only program which can record for any length of time up until your hard drive is full (most other programs don't go above a couple hours). CE2K can be downloaded for a 30-day trail. Also I highly recommend the Cool Edit "audio clean up plugin", this is also expensive, $50, it has a record click remover, tape hiss remover. I think the results are near miraculous especially in cleaning up tapes of radio broadcasts with poor reception.

====

I'm upgrading my PC at home, and will have a motherboard with on-
board sound (Epox 8KTa3).
Would I be better off continuing to use my current sound card
(Creative Ensoniq) which has done a pretty good job for me in spite of
it not being "professional" quality, or using the motherboard's built-in
sound feature? I use the sound card primarily to archive records and
tapes to CD and some limited voice work using a Sennheiser mic and
JoeMeek Mic processor.
I don't have motherboard sound specs yet for a direct "quality"
comparison between the two options -- hopefully the specs are included
in the Motherboard documentation because I can't find them on-line.
Quality issues aside, I'm also curious about Motherboard sound and
its demand on the CPU as opposed to a PCI sound card.

>HUGE listener base.

We're all waiting to hear who they are! You should define the
capitalized words. What does TREMENDOUS success mean on the net? On
the net, what's a HUGE listener base?

If TREMENDOUS and HUGE were relevant to the Internet someone other
than the streaming providers (servers) would be making TREMENDOUSLY
HUGE profits.

>The additional exposure (for both the station itself
>and its advertisers) is so powerful, even Arbitron has gotten involved.

Arbitron has gotten involved because it can be another profit center.
It's in Arbitron's best interest to hype the net as much as they can.
The bigger it gets the more money they make. Or, better still, the
bigger people think it is, the more money they make.

>I don't
>believe the Ad industry would have agreed to something they didn't think was
>practical. As advertisers realize the power and exposure an internet ad can
>bring to their product, I believe that for them the cost will end up
>practical in relation to the benefits the advertising will bring.

Then why are they requiring stations to remove the ads from their
webcasts? If they were OK with it all along, why are they getting cold
feet now? Could it be that advertisers won't pay the agencies the
extra costs because they don't feel they'll get any benefit from their
spots running on the net? Remember that agencies pass on all costs to
the client.

Where the Internet is concerned, TREMENDOUS and HUGE are PUFF AND
HYPE.

Rich.

Ah! A voice of reason! Of course the power of the internet as a radio
extension has yet to be proved. It's NOT the same thing as cable for a lot
of different reasons.

BTW, I saw a few companies at the recent NAB show offering internet radio ad
insertion to block the problematic ads.

I highly recommend the ORIGINAL Sound Blaster 16 card. It may be very old and not "plug and play", but for recording and playing back digital audio (WAV, MP3, etc.) it still offers excellent quality. You should be able to get one on eBay for less than $15, and all the drivers and set-up info are on Creative's web site at www.creativehelp.com. Why get something that is "Sound Blaster 16-compatible" when you can get the real thing?

They aren't expecting the stations to pay. The ad agencies are telling stations not to run the spots on the net so they won't have to pay the extra session fee. If the station refuses to remove the spots from the internet feed, the agency will no longer buy schedules on the station for fear of incurring the fee. I suspect they'll require a lower rate the next time around to compensate for what it cost them.

Since Epox apparently does not publish specs on its onboard sound
device, (can't find it in their docs or on-line), I guess I'll keep my
Ensoniq card and buy another card for my son who will be using my old
motherboard. Thanks for your responses (I've had several E-mailed to me
as well)
Someday, perhaps, I can invest in a professional grade sound card??

Gee, ya think?

The ongoing Bubba the Love Sponge soap opera is a perfect example. Air
"talent" commits felony animal cruelty, all in the name of increasing exposure
and ultimately ratings. Air "talent" then jokes about his felonies on-the-air,
knowing that Clear Channel will hire him the best attroneys money can buy. Not
because they care two craps about him personally, but because they wish to
protect their investment. Bubba is saving CC the cost of a local morning show
in several markets. The suits and shareholders love this.

Considering the seriousness of the charges, several affilliates would have
cancelled Bubba by now, and the strategy would have backfired. But wait...they
CAN'T cancel...they're all Clear Channel stations! The Borg has spoken!
Resistance is futile!

In the end, Bubba will likely be acquitted of all charges and CC will get the
last laugh on their listeners and their advertisers. Money talks. Decency and
justice be damned. Such is life in today's dumbed-down version of corporate
radio broadcasting.

Gee, ya think?

The ongoing Bubba the Love Sponge soap opera is a perfect example. Air
"talent" commits felony animal cruelty, all in the name of increasing exposure
and ultimately ratings. Air "talent" then jokes about his felonies on-the-air,
knowing that Clear Channel will hire him the best attroneys money can buy. Not
because they care two craps about him personally, but because they wish to
protect their investment. Bubba is saving CC the cost of a local morning show
in several markets. The suits and shareholders love this.

Considering the seriousness of the charges, several affilliates would have
cancelled Bubba by now, and the strategy would have backfired. But wait...they
CAN'T cancel...they're all Clear Channel stations! The Borg has spoken!
Resistance is futile!

In the end, Bubba will likely be acquitted of all charges and CC will get the
last laugh on their listeners and their advertisers. Money talks. Decency and
justice be damned. Such is life in today's dumbed-down version of corporate
radio broadcasting.

>the client.

And her we have come back to the basic position. Agencies don't feel they're
getting their money's worth. Well that's not exactly true. You have to
remember this was all part of a very large negotiation between AFTRA/SAG and
AAAA, et al. It was part of what was on the table. AAAA said OK to get some
things they wanted from AFTRA\SAG.

Someone made the point earlier that the 300% of scale covered the spot for
one year. I don't know if that 's true, it may be. If it is, my question is
what about the usual 13 week broadcast cycle. Does the ad agency pay the
300% on teh first 13 week cycle and only pay 100% for additional 13 week
cycles if the spot stays on the air from additional 13 week cycles?

I'll have to forward this one to the local office.

Well, this isn't as exciting as the other stories, but I'll share. Many moons ago, while in the USAF, I was assigned to an Armed Forces TV station at Goose AFB, Labrador. The station was located in the basement of housing for female personnel. At times the station was a one person operation, such as late nite. Being romantically involved with one of the young ladies upstairs, I would sneak up to her room at times leaving the station unattended, but monitored on her TV. This one particular night we were running a 3 reel late movie. The 2nd reel was listed as running 36 minutes. Ah, plenty of time to visit my honey. While in an extremely passionate situation, all of a sudden her room became totally bright as if someone had turned on a light. The film broke and the light was from the white screen. I literally ran down 2 flights of stairs to the station carrying my trousers. I was written up by the Captain for taking too long to correct the problem.

I'm in the same position with a Sony laptop, and with all due respect to
Craig, I have made quite satisfactory recordings with my previous 2
machines (Toshiba 410 and Fujitsu F450). My Sony (F801, similar to the
F610 that was sold in the States, I believe) is quite unusable, with a
s/n ratio via the mic input of approx 18dB being the best I can do with
all the appropriate pads and terminations. Added to which, the input is
mono. The older machines were in the 50 - 60dB range using similar
measuring techniques.

I've been searching for anyone who can point me at the pin-out of the
port replicator slot under the machine or tell me whether there might be
a line in on that. The 'docking station' that Sony supply does, however
not have any additional audio i/o. I understand the equivalent Toshiba
does, a fact that I wish I'd known when purchasing.

The second research I'll do if I ever have time is to see if the CD
drive feeds analogue to the soundcard, and whether there might be a way
of bringing a parallel input out from that.

Sorry for the off-topic, but it would be great to find an answer.

Hogwash, unless the spots running have a contractual connection to any of a station's on-air personnel via a personal contract. Those kinds of contracts could account for maybe 1% of an average station's spot load.

Stations are not liable for paying commercial voice talent fees, residuals, and H&R for sessions they have not produced, regardless of whether or not the talent is an AFTRA/SAG member. It's the agencies and production houses that are liable for those payments. Ergo, if an agency tells some station that the station would be liable for the 300% talent fee, that station should tell them to blow it out their hole. On the other hand, agencies can request that stations not run spots. That's perfectly reasonable.

IMHO, stations that have been using their web sites and streams as a "value added" bonus should have their heads examined. Bandwidth is not free.

Since Epox apparently does not publish specs on its onboard sound device, (can't find it in their docs or on-line), I guess I'll keep my Ensoniq card and buy another card for my son who will be using my old motherboard. Thanks for your responses (I've had several E-mailed to me as well)
Someday, perhaps, I can invest in a professional grade sound card??

The question then is, since we, the designated Chief Operators, are the
ones the commish *can* hold responsible for such conduct if they choose,
might we be able to push for some common sense in controlling that from
time to time?

Maybe I'm in an unusual situation in that the GM *does* listen to me,
after all he is 30 years younger and supposed to know it all... I have
now sat in this current chair through 3 GM's over 17 years, none of
which ever acted like he was going fire me for diss-agreeing with him.

I have also headed us off from more than one supposedly 'killer project'
or business alliance as the case may be, simply because I've been there
and done that and lived to tell about it. And later evidence said I was
right too many times for them to ignore me all the time.

Come on all you guys & dolls carrying a Chief Operator designation,
bring your soapbox and megaphone to the GM's office and make yourselves

heard regarding some of this 'crap'. *USE* your power as the designated Chief Operator, making sure they know the law makes you responsible for much of the day to day operations and rule compliance, and that you will respond to commish inquiries with the truth as *you* see it..

If then they want to change the name on the letter of designation, then maybe you didn't want to work for such jerks in the first place.

If you have the talent to do the job in the first place, new work will darned near come and find you, probably at a decent raise while you're at it, particularly in tv with the HDTV conversion under way. If you don't, well...

Cheers, Gene

The Anthony Lynn device seemed to fit the bill, but I couldn't stand all
the lockups.
I was able to make it work once and the quality was good.

There's got to be something else out there. I too, would not have
purchased the Sony had I known. There's actually a reference to line in
in the manuel, but when you go there, it just talks about the mic input.

I called Sony tech support and they confirmed that there was no provsion
for stereo input.

It is not hogwash. If the agencies cannot collect the fees from
stations, they are telling stations that they will be dropped from
future buys in order to recoup the fees. If that isn't holding
stations liable, I don't know what is.

If you are a station that does a significant amount of
national/regional business, this could be devastating. It's no
wonder the 'net streams came down so fast.

Not proven in court yet. Should use the term "allegedly" in that sentence.
There is even a legal issue revolving around the term "ferral" in the
description of the animal.

>all in the name of increasing exposure
> and ultimately ratings. Air "talent" then jokes about his felonies
on-the-air,
> knowing that Clear Channel will hire him the best attroneys money can buy.
Not
> because they care two craps about him personally, but because they wish to
> protect their investment. Bubba is saving CC the cost of a local morning
show
> in several markets. The suits and shareholders love this.

Syndication went on long before Clear Channel. The Red and the Blue networks
were good examples of "syndication." So was AT40 and many other products
carried on large groups of stations, sometimes called "networking" and
sometimes just called by what it is in any case, syndication. Paul Harvey is
"syndicated" as is nearly every sports play by play network. All it means is
that a station picks up a program that it did not originate, and that has
been going on for over 70 years!

And I'm sure the shareholders could care less who is on the air in any
particular market. Or what little tricks they use to get ratings or press
coverage.

>
> Considering the seriousness of the charges, several affilliates would have
> cancelled Bubba by now, and the strategy would have backfired. But

wait...they
> CAN'T cancel...they're all Clear Channel stations! The Borg has spoken!
> Resistance is futile!

If Bubba got good ratings, he will be kept. Clear stations were sure fast to drop Rick Dees in Phoenix and Vegas. Again, this is a radio game, not an invention of Clear Channel.

While not a great fan of Clear's music stations, I have to admit they have done a lot for AM. A few of their AM are truly good examples of entertaining, successful talkers.

>
> In the end, Bubba will likely be acquitted of all charges and CC will get the
> last laugh on their listeners and their advertisers.

If he is absolved, it willbe due to the definitions of the type of animal killed and the practices used by hunters to similarly kill ferral hogs in the wild. We could go into the humane treatment of minks here, too. The only difference is that Bubba did not do his show from a mink farm, where the critters are killed daily in no unlike circumstances.

> Money talks. Decency and
> justice be damned. Such is life in today's dumbed-down version of corporate
> radio broadcasting.

It has nothing to do with democracy. Just whether the industry is better off with large ownership limits or whether this deregulation thing has gone too far. Bubba is not even the issue. The real issue is the same that we confront when we see that there are fewer supermarkets competing in each city, fewer gasoline vendors, even fewer retailers. The issue is bigness and it permeates our entire economy. Radio is just a sidebar to what is going on in the drug, chemical and manufacturing sectors.

2075. College radio ideas

Newsgroup: rec.radio.broadcasting

Hi there,

I do a college radio show, and was looking for ideas to make the show more entertaining/enjoyable for listeners. I was wondering if anyone had any ideas for stuff to do on a college radio show, unfortunately we don't have the ability to put a phone conversation on the air, so that's out. But if anyone has any ideas, I'd appreciate it.

Thanks!

Mark,

I'd be interested in knowing the source of your understanding. Bottom line:
the radio station is not the signatory, the ad agency or production house IS.

If the station refuses to comply, the ad agency or production house is still
required to pay the talent. If the staion refuses to comply, they put the ad
agency or production house at risk and enter into an adversarial
relationship with them. That's not a good way to business and may result in
legal action against the station or "buying around" the station.

By the way, are you still streaming?

Mark,

Thanks for responding to me personally on the other question. As to this post; if appears the broadcasters and AFTRA are on the same page here. Both agree that internet streaming is "value added." You mention the idea of "selling internet streams as a value added service." At present, it looks like broadcasters aren't "selling" it, but giving it away. That's where the broadcasters and AFTRA differ.

To broadcasters, it's a relative freebie as well as a way to sound hip to their audience and pick up some listeners who can't hear the station otherwise. In doing so without compensating the artists who write and perform the music a station plays and on the commercials they make their money airing, however, they are "giving away" what isn't theirs to give; the livlihoods of people who make their living creating the music and doing the voicework for the commercials.

Strangely, Napster comes to mind at the moment.

2080. DFW ratings/rise of spanish stations

Newsgroup: rec.radio.broadcasting
Date: 2001-05-07 12:13:20 UTC
From: arnoldevns@aol.com
Message-ID: <tfd4b054vr0c6e@corp.supernews.com>
Source record: 14440

The latest ratings show spanish language formats in the DFW area have grown by 53% over the past year to a 7 and a half share of the audience. One station (KLNO) has more than half that audience and another station has a little over a one share. The rest of the dozen or so spanish language stations are under a one share or don't show up at all.

The folks at KLNO must be very pleased with their surge into the top 10. I still have to wonder how long these other stations will stay in this genre given their meager or non-existant numbers.

Also, "the talk that rocks" has finally risen out of the ratings gutter even if their "talk" programming hasn't. KYNG is now back over a 2 share for the first time since dropping the Young Country format a little over a year ago. Howard Stern is the primary reason for their increase - and Russ Martin is drawing decent numbers in his new afternoon slot. Consequently, KYNG's rise has taken some young male listeners away from KTCK "the ticket." The Ticket is also getting increased competition for the sports talk listener from new comers KTRA 1190am and KESN 103.3fm.

It will be interesting to see how the locally produced "ticket" programming fares against the primarily network oriented KTRA and KESN. (although KESN does have local talk in the afternoons and both stations have local sports updates all day long)

Personally, I think KTCK will remain at or near a 3 share and the other two will have a hard time maintaining a 1 share.

Hi People

FunkyTiger Internet Radio, based in London has recently come on-air!
We are currently broadcasting a fresh mix of current music, and classic
tracks from the 80's and 90's, and your requests.

If you want to have a listen, visit
www.funkytiger.co.uk

We've got a 56k low-fi stream, and a hi-fi stream for users with fast
connections.

If you're interested, we're looking for DJ's to present themed shows (of
your choice) to be broadcast on FunkyTiger Internet Radio.

If you're interested, please e-mail me at james@funkytiger.co.uk

Thanks

James

Picture this:

It's the 1970's. The station owner has a couple of rental houses right next door to the station (in a converted house itself). He rents to a couple of the DJ's (college guys) that work at the station. Bathroom breaks are relaxing. Put on the LP version of In-A-Gadda-Da-Vida by Iron Butterfly (17:04), take the phone off the hook and run next door for a cocktail or three. It was clean, fun, and entertaining live local radio at it's best.

Maybe it is fiction and fantasy, Rich. I'd like to think some stations
have fortitude, courage and, uh, a strong bottom line. <grin> But
Look at all the stations that stopped streaming all of sudden, and all
of the misinformation that began floating around the newsgroup around
the same time.

Coinkadink?

2088. Goodbye CHUM (1050) Toronto

Newsgroup: rec.radio.broadcasting
Date: 2001-05-10 04:07:46 UTC
From: Tony Santiago <tonysantiago2@earthlink.net>
Message-ID: <tfk50i72jn4p96@corp.supernews.com>
Source record: 14449

I was in Toronto this past weekend and as I was driving home, heard the final hours of CHUM-AM (1050).

I am not from Toronto but as I understand it, CHUM was a big influence in rock and roll for Canada, similar to how WABC was musically in New York during the 60's and 70's. It was probably one of the last AM stations still playing music. Their last song (at 2:44:30 PM) was incidentally their first song when they went to the rock and roll format in 1957, "All Shook Up", by Elvis Presley. Then they went to a montage of past announcers, events at CHUM, old jingles, celebrity guests until 3:00 when CHUM officially became Team 1050, a national Canadian sports radio network.

Always a sad moment to hear a radio station's final moments, especially the influence that this station had.

Yeah, I've noticed that too...it seems like it should be referred to as the "rise of Spanish station [singular] in DFW". I think that it does show that if you put a Spanish language station on a frequency that can actually be received in the heavily Hispanic parts of the metro, you can get a very good audience.

I wonder how long it will take before someone else will flip a full signal station over to Spanish and give KLNO some real competition? And how long before someone takes those sub-one share stations and puts something on them that actually targets listeners in their coverage areas?

Which brings up the issue of Jamming oldies/R&B formatted "Magic 94.5", now sinking below a 1.0 share. Any guesses on how their latest format tweakings in favor of a more urban-based format are going to work when their signal sucks in the areas with the largest Black populations in DFW?

> Personally, I think KTCK will remain at or near a 3 share and the other two
> will have a hard time maintaining a 1 share.

That's about what I'd expect to see, as well. But then Susquehanna needs something to feel positive about on the talk front in DFW, considering the continued dismal performance of talk-formatted KLIF.

From the reports that I''ve read there seem to be some major differences between what happened to the boar and what goes on at a mink farm.

I couldn't care less if people kill animals. I eat animals, I pay people to kill animals for me. But torturing animals, I have some problems with that. The way that is was reported the boar was castrated in the parking lot before they killed it. There really isn't any reason to do that, except for some sick kicks.

I read that the folks who did it were asked why they castrated the animal and gave some kinda BS story that if they didn't castrate the beast testosterone would flow out of it's balls and ruin the taste of the meat. Anyone who has worked in a slaughterhouse will tell you that that is nonsense.

I don't know what happened, I've only read reports, but I do know that torturing animals for sick thrills is against the law. It's gonna be interesting to see how this winds up.

The scumbags wear better suits now.

Seriously, there have always been freaky characters in all the entertainment businesses, ranging from local radio to national TV and cinema. At least today a greater percentage of the thousands of people working in radio have some benefits and things like 401-k's that were unknown when I got into radio. My first experience was with a company run by a certifiable nutcase who lost several licenses and who treated employees badly, particularly since most of the guy's stations were ethnic; at conventions in later years I learned that working for owners like that was part of nearly every broadcaster's experience.

Some things change, some do not. It's probably the same in the after market muffler business, too.

I used to be able to listen to the Associated Press Radio all news service via a Real Audio feed at the URL: pnm://209.249.202.145/aplive.ra, but a few years ago, that feed stopped working. Later, I was able to find a feed at the URL: http://stream.ap.org/update.ram, but, now that one also no longer works. Is there anywhere where I can get the Associated Press Radio all news service via Real Audio, Windows Media or MP3?

It certainly was. I was fortunate enough to be able to spend that
last day at the CHUM studios, and it was a very emotional day for
the staff and for the Waters family, which has owned CHUM since 1957.

See all the pictures and the full inside story in this week's NorthEast
Radio Watch, http://www.fybush.com.

We do interviews in house and remote so we don't know what kind of phone lines (analog or digital)
will be available.
I've looked into some of the Gentner hybrids and other goodies.
Any recommendations from experience as to what to set up?
Right now I am setting up to try a headset/mic into a Gentner Microtel that intercepts at the phone's handset instead of the line, then from that directly to my recorder, eg. dat, cassette, whatever.

Thanks, Charlie

It's even sadder when you work there, and you have a letter in hand
saying the format's changing and your services are no longer desired.
I still have one of those letters from CJOR (though somehow I stayed
at the company for eight more years. It's radio. Go figure).

But realism has to take over. When I was 14, you either listened to
CFUN or CKLG. Ask 14 year olds about either station now and they'll
go "What?" Those stations, Toronto equivalents like CHUM, and other
AM rockers lost their target demographics years and years ago. A
format change was inevitable.

What's interesting is here in Vancouver, it isn't the CHUM station that's running the format, it's CKST 1040. I'd be interested in knowing how much money CHUM pumped into the station, and why they didn't put the format on their own faltering AM outlet here instead.

Something of a milestone has been reached today in Bakersfield, and is worthy of a brief mention.

KUZZ AM/FM afternoon drive personality Chris Conner today marks 30 years on Bakersfield radio in the same 3-7PM time slot. Conner started at then-top 40 KAFY on May 10, 1971. He moved to country KUZZ in 1977 and has been there ever since. Incidentally, as KUZZ (AM) now occupies the 550 kHz frequency that KAFY had in 1971, he can be found at the same dial position as 30 years ago.

I have seen this routinely done in slaughterhouses outside the US. It may be
a mistaken belief, but apparently hunters in the US commonly do it.

And you misunderstand my comments. I am not defending the treatment, only
stating that the guy has not been convicted yet and is thus, in the US,
presumed innocent.

I wondered the same thing, Leo. About the best I can do is listen to the WTOP2 feed at http://www.wtop2.com . It runs a good portion of the AP all-news feed, with WTOP features interspersed. You get more AP stuff on weekends than weekdays. I listen to the high-speed version, which comes in at, I think, 20.9 kbs. There's a lower-speed version, too.

I did a web hunt, and came up with another station but the link was outdated. The address you have above, afaik, only runs the five minute casts (recorded) from the top and bottom of the hour. I haven't been able to find a raw feed of it.

I'm happy with the Gentner digital hybrid I use in the studio, but
don't ask me how it's wired up.

In the field, I use a device called a Tac+ made by SoundAmerica
Corporation. It can be used on any (non-pay) landline phone that has
a separate handset, and can be used either to record or feed audio.
It even has a little toggle switch to mute the handset's mic. (you
patch it between the handset and the phone). Very, very handy, and I
recommend it highly. Audio quality is excellent. Hook it up, plug
it into your minidisc or cassette machine, and go to work.

STAGE LEFT is a weekly mix of music, comedy and spoken word
produced at KDHX-FM in St. Louis. Listen to it any time with
RealPlayer at http://www.stageleft.org or
http://www.kdhx.org/listen.htm

The latest edition of the STAGE LEFT webcast went on line
Wednesday (May 9). This week the subject is "Crime and
Punishment, Part 1 - The Stage". Just in time for for the revival
of right-wing politics in the USA, a program of songs about
crime, crooks, cops, judges and, of course, prison (America's
Number 1 growth industry!) We've got music from "Sweeney
Todd", "Bells Are Ringing", "Guys and Dolls", "Kiss of the Spider
Woman" and even some Gilbert and Sullivan. And, of course,
news headlines from The Onion.

You can also get both the current episode of STAGE LEFT and
previous weeks' shows at http://www.stageleft.org or
http://www.kdhx.org/listen.htm The play list is at
http://playlists.stageleft.org We'll be archiving a month's worth
of shows.

Next Week (5/16): "Crime and Punishment, Part 2 - The Screen"

Scott,

I must say....that is one IMPRESSIVE article you wrote. Everyone should take a click at it, it was real good.

I guess you could say I was the last "new" listener of CHUM since I have never heard the station before...not living in Toronto and all but hearing all the press about it on CityPulse and the Sun. For me with Toronto radio, my peak time were the three stations playing dance music back in 1997-8 (Energy 108, Hot 103.5 and Power 88.5) Though dance music is everything but dead on the Toronto dial, though things have slacked off, I always loved Toronto for that.

And to me the final hours of CHUM were very reminiscent of Dan Ingram signing off WABC before they went talk.

>infraction, not the chief operator who is only doing what the licensee tells
>him to do. (When somebody starts belting out obscenities unexpectedly,
>*that* is the time for the board op to pull the plug.)

All of which is pretty much true. Like the IRS trying to collect back
taxes on a joint account, they won't waste time on the lady as she
rarely has any money other than the child support, so guess who pays?
The guy, whose up to his gonads trying to pay the child support AND the
penalties and such the IRS wants because SHE is the one doing the taxes
and thought she could fudge things about $20k. And my point is that
there were two signatures on that tax form, 2 sigs that should be
equally responsible. But that isn't how the *real world* works.

So yes, while the rules say they can come after us, the chances are
pretty slim that they'll waste any great amount of time or effort on the
guys in the trench, they don't have any great amount of money anyway.

With regard to the board op pulling the plug, I personally know of one
who did after about the 20th fuck, shit, and damn during an interview.
The owner came out of the studio with smoke coming out of both ears and
fired him on the spot. He sued, and the court sided with the owner. So
much for the real world folks.

OTOH, he was all alone. If it happened a hundred times in a couple of
days, then there may be enough clout to send the message we'ed sometimes
like. If we could make it stick by shear numbers of us doing it, the
message would be heard quite a bit louder by the likes of the Howard
Stern lovers/owners.

IMO this would have to be an organized, lots of pre-publicity, set date
that the rules would start being enforced by the board ops. Who knows,
maybe we might even get some respect from the commish, whos amply demo'd
they don't care with their so-called no test general class only license.
As a holder of a first since the 60's, I feel like we've been sold to
the highest bidder.

```
Well, this slave is about to retire, I've been paying SS for over 50
years and its time I got some of it back.
```

Cheers, Gene

Here in Montreal CHUM, the corporation, had sold CHOM (FM) and CKGM
(AM) to Standard Broadcasting, which already owns CJFM and CJAD.
I guess it was pending a CRTC review over the issue of owning
multiple stations in the same area. I think Standard was
talking about getting rid of CKGM, but who knows to whom?

Then this thing about The Team came up. It must have been in
the works for some time, yet it couldn't have been that many
months ago that the concept showed up in print. So CHUM backtracks,
and keeps CKGM for "The Team". I haven't heard anything, but
it would seem CHOM is still going to Standard.

There was talk that CJFM/CJAD would take care of CKGM in it's
THe Team persona, sort of like a subcontract. I'm not sure
what the status of that is now. But Ted Blackman, who might
have been sports director at CJAD but definitely was an oldtimer
there, and Mitch Melnick who had an evening sports talk show, have
apparently moved over to CKGM. I haven't seen any details of
their move.

Since I have no interest in sports, I won't be listening to
CKGM again, until/unless there is a new format change. I'm
not sure when CKGM first went on the air, but thirty years
ago it was owned by Geoff Stirling. Like CHUM in Toronto,
it was the AM station to listen to for the young. But
it's gone through quite a few format changes in the past
few years. It was "lite rock" for a while, and then oldies

witha mix of newer material, somewhere along the way it
moved from 980KHz to 990KHz (and a better transmission pattern),
and I think they changed their callsign for a while with the change
of frequency. Then in early 1996, they went to talk, the slogan
was "Talk with Attitude". That was the time when Loel Green's
talk program out of Ottawa was syndicated, and CKGM (it had
reverted to it's old callsign with the new format) carried it.
There was some interesting local programming, but they also
carried a lot of syndicated US programs. SLowly, the local
content was killed off, and it got to the point where
the only local show was the morning program, and the guy who
did it just last week said something about how nobody was listening
to it towards the end.

When the Great Ice Storm of 1998 hit, and CJAD lost it's tower,
a deal was made for CJAD to use the CKGM facilities, which it
did for about five months. In June of 1998, CKGM returned,
as "Oldies 990".

It's now wonder that there wasn't the hype here in Montreal
that CHUM in Toronto seems to have gotten. There was no continuity
to the CKGM that we grew up with.

> I am not from Toronto but as I understand it, CHUM was a big influence
> in rock and roll for Canada,

I grew up listening to CHUM. In its heyday it was also an influence in the States as well. Dick Clark was a 'DJ' there, as was Jungle Jay Nelson.

The CHUM Chart was (if my memory is correct) the last regularly published Top 40 listing.

Toronto is a major league sports town, but I'm not sure it (and Canada as well) is ready for two all-sports stations. The Team will be hard pressed to pull in numbers against The Fan 590 (except for Blue Jays broadcasts).

On a related note, the Maple Leafs are closing monitoring to on-air product at the new Mojo Radio www.mojoradio.com

Leafs officials say they're concerned about the raunchy product that's being put on the air during all dayparts. Perhaps contemplating dropping Mojo as it's on-air outlet.

Disney/ABC bought this 1000/500 watt Pawtucket (Providence), RI station. The station's poor signal barely covers Providence at 550khz. The station has a history of changing calls, WPAW, WGNG, WLKW, and formats on a regular basis. Even with a power boost, I can't see this as a good investment. Any comments?

2120. Augusta GA?

Newsgroup: rec.radio.broadcasting
Date: 2001-05-14 19:01:54 UTC
From: Ron Hardin <rhhardin@mindspring.com>
Message-ID: <tg0at288unev56@corp.supernews.com>

Is WDRW 1630 Augusta GA off the air?

I haven't heard them in Ohio since Imus on I guess Wednesday 5/9,
until then a fine clear-channel source of Imus in the East.

Normally they're audible until 9am this time of year.

Did they have a transmitter fire? Antenna fell over?

WCBN WILL DESTROY YOUR FEEBLE FORMATS

WCBN - Over 25 Years of Freeing Your Mind - Listen to us online!

WCBN is the University of Michigan student-run community freeform radio station in Ann Arbor, Michigan. We broadcast at 200 watts to the University and its surrounding communities from the basement of the Student Activities Building in downtown treetown. We have been broadcasting a genre-less overview of music, news, and public affairs for over 25 years.

WCBN's musical format is freeform, with some specialty shows. Freeform involves all different kinds of music, including jazz, reggae, blues, hip-hop, country, rock, and just about everything else under the sun. Instead of telling our DJs what to play, we allow them to select their own recordings from our vast and unique library. It is their responsibility to mix together many different kinds of music in an intelligent fashion, and show links between musical genres.

Which makes me ask, since I think Mojo is the only station in North America doing this....can male talk radio work (that is if that is what they are calling it).

I have seen the ads in the Toronto alternative papers for Mojo Radio. With the success of young male oriented magazines such as Maxim and Gear and television shows such as "The Man Show", I guess it was just a matter of time that a radio station would do a format based on the interests of young men...sports, beer, gadgets, sex, etc. Does anyone up there have preliminary results to how this station is doing?

And for that matter being in New York City, what type of talk format would anyone classify WNEW as? And does anyone feel that the male talk format like Mojo would help improve ratings there?

Premier Radio Networks confirmed on Monday 5/14 that WABC/New York will be running Dr. Laura's talk show in the 11 PM-1 AM slot beginning May 29th.

I'm beginning to wonder if her show will even be a blip on the radar a year from now.

A stand-alone AM? It must be worth about $1.68.

Mind you, CKST changed overship here to a small consortium,
which then made the deal to air the TEAM network. So whether
CHUM pumped in some cash, or bought part of it, I don't know.

> Then this thing about The Team came up. It must have been in

> and keeps CKGM for "The Team". I haven't heard anything, but
> it would seem CHOM is still going to Standard.

It's tough keeping track of this stuff. There has been a flurry
of changes locally the last couple of years (between ownership
and format changes).

> There was talk that CJFM/CJAD would take care of CKGM in it's
> THe Team persona, sort of like a subcontract. I'm not sure

I remember Mitch from CKO. I think he replaced Sandy Rubin
covering the Habs games. Or maybe it was vice-versa. So many
people went through CKO, I can't keep them straight.

> Since I have no interest in sports, I won't be listening to
> CKGM again, until/unless there is a new format change. I'm

He was the guy into TM, wasn't he? I never worked back there,
but know people who have and have heard stories.

> Then in early 1996, they went to talk, the slogan
> was "Talk with Attitude".

CHUM is still doing that out here with CFUN. Doctor Joy Brown
and investment infomercials have "attitude"? Right.

> It's now wonder that there wasn't the hype here in Montreal
> that CHUM in Toronto seems to have gotten. There was no continuity
> to the CKGM that we grew up with.

Not long ago, CKLG changed to an all-news format (under new
ownership). 'LG was one of the two powerhouse Top 40s in the 60s,
70s and into the 80s. I don't think there were many misty eyes
when it bit the dust, even among those old enough to remember when
people actually listened to it. People gave it up for FM years ago.

Hey people.
Sorry to interupt the day, but I just thought you might like to know that our online radio station is online and running!

http://radiokaos.x5.ca

You can even use the web to send us requests, and they will be placed automatically in the bottom of the rotation queue, radio on demand! :)

That's all, come and check us out, we have live, local programming (Windsor and Essex County Area) every night at 7 pm.

Give us a try, see what you think, you can rach us through ICQ at: 114466114 , or by e-mail: newsgroup@radiokaos.x5.ca .

And now back to your regularly scheduled conferencing :)

Let's see now... KEYI was on MLK Blvd, then moved to the pretty office building with fantastic studios (I helped specify them) then they were gobbled up by CC, then sold to Secret then sold again... so where are they now? and who owns KEYI now? I actually miss that station after taking females 25-49 from 4.2 to 17.1 in middays as its production director... and darnit I miss the production studio with voice booth, 15 inch monitors, power array of crowns, 16 track analog tape, midi keyboard and sequencer and a great technics board... darn it for the good ol days

Disney/ABC has money to burn. They are a media company.
Pawtucket/Providence is just another market to tie up in their grand scheme of things. Disney is playing out their Mickey Mouse children's programming card by including every market they can grab. Its interesting to note that kids don't even listen to the programming at 3am, if you know what I mean.

After the Kid's concept crashes and burns, they will be in a position to diversify in any direction they desire programming wise. Besides, radio is a cheap buy now, even in major markets, and note too that Disney's buys are primarily AM based semi independent/independent stations, which are at bargain basement values right now. What's a few mil to them. The stockholders will never miss it.

With money to burn, developing a current goal in so called children's programming which will bomb anyway, its really a move to bulk up their media properties inventory for future program/network diversification. As long as the FCC rules allow monopolization by media companies, this trend will continue.

Just my opinion.

Some time ago, I started a post about Chicago AM's sounding pretty good in my rented (Avis) Chevy. Yesterday, I purchased a 2001 Chevy Suburban. The factory radio has a remarkable AM section. It actually sounds pretty good. Today, I was in East Texas, listening to KWRD 1470 in Henderson, which I think is 5000 watts daytime. Their antenna is smaller than many folks Rohn 25 TV antennas. Previously, abvout 20 miles was about it before they were burried in a blast of static. Today I got decent reception for more than 60 miles! Not only that, but it actually sounded pretty darned good too. There was bass. Ther were highs (sort of). As I drove toward Dallas, I tuned in KAAM, a station that I have publicly said bad things about on this news group, especially regarding what they sounded like. They sounded pretty good too! It was way better than I expected.

While I think KAAM's programming is still "confused" at best, I take back anything I ever said about their engineering.

This confirms (at least to me) that AM can sound decent. It's just we've been willing to accept really bad radios for so long that we no longer know better.

That is a shame...

> Mojo would help improve ratings there?

For all intents and purposes, Infinity's FM talkers like 'NEW, WCKG in Chicago and KSLX in LA *are* doing male talk--they just aren't tagging it the way Mojo is. Their primary demos are 18-34 males. In fact, 'CKG's evening show with Pete McMurray used to called "Radio for Men," although they dropped the title earlier this year (but it's still McMurray's show). But 'NEW and KSLX both carry Leykis, who would fit perfectly with the lad-mag orientation (come on, "Flash Friday?").

Also, a lot of sports talk radio devotes time that could be spent on sports doing an audio version of Maxim (especially if they're in a city like Chicago, where most sports teams aren't that good--just listen to WSCR).

Hi All,

indieradio.org plays indie rock and pop in streaming mp3 shoutcast, free for your listening pleasure. check out the web site at http://www.indieradio.org and listen often! i think you will enjoy the site and the broadcasts.

some very cool stuff is happening on indieradio.org. thus, the point of this semi-infrequent newsletter type posting. in an attempt not to make this mail look what it truly is, and that's one long rambling mess. i'll break it down into a couple of sections:

1. BROADCAST / PLAYLIST UPDATE
2. SMASHING PUMPKINS INDIE TRIBUTE and BENEFIT ALBUM

==========

1. BROADCAST / PLAYLIST UPDATE:

i find myself updating the playlist more often then i should, but i just can't resist. there's a lot of great music out there and i keep receiving the submissions of some outstanding independent artists. this week I plan on including some tracks from several cds i have received, including the "kitra 3" compilation released by powerbunny 4x4 records (www.powerbunny.com). Jeff from powerbunny has done a fine job of putting together a 2 cd comp packed with some good indie rock bands. it's pretty new, and makes for a swell listen. i'm going to spread a few select songs among the "poploser," "electropop," and "women in indie" broadcasts. the kitra 3 updates are detailed below.

POPLOSER RADIO (www.indieradio.org/poploser)

+ aviso' hara - bradley wake-up
+ casanovacane - love-in-idleness
+ sparks fly from a kiss - engaged
+ the makeout party - girlfriend
+ the scott farkus affiar - private gunther

ELECTROPOP RADIO (www.indieradio.org/electropop)

+ coin - pod position

WOMEN IN INDIE (www.indieradio.org/womeninindie)

+ prosolar mechanics - the future of sx
+ suran song in stag - made in philippines

i've also recently added songs from several swell independent artists like gravity and henry, manifold splendour, glen kepley, aeraby, halley

devestern, moxiestarpark, and a few others who have sent me their music.

the broadcasts, as a whole, have grown tremendously in the past months. there's well over 50 hours of great indie music contained within the radio broadcasts on indieradio.org. check the playlists for more info

==========

2. SMASHING PUMPKINS INDIE TRIBUTE and BENEFIT ALBUM

justin carter and the popstatic record co (www.popstatic.org) have two projects in the works, right now. a benefit album (to be released this summer 2001) to raise money for chicago homeless and an indie tribute to smashing pumpkins (released this winter 2001).

for the first benefit album, 100% of all profits will go to a non-profit organization he is involved in called 'project ezra.' it is a chicago based organization that helps homeless people. this compilation is scheduled to be released this summer.

the second album is going to be an indie tribute album to the smashing pumpkins and is scheduled to be released this winter. this one is also a benefit album, but for a different charity called neon house. obviously, it will contain covers of smashing pumpkins songs.

popstatic is on the look out for artists to contribute their work to these projects. so if you are interested, let justin know by sending him an email at:

justin@popstatic.org

you can send any demos to the following address:

justin carter
c/o popstatic records
5959 n kenmore #204
chicago, il 60660

be sure to tell him that danny copacetic from indieradio.org sent ya. in sum, he's looking for demo tapes/cds of 3 or more songs or mp3s (just email justin and let him know what url he can visit to download the music. the songs for the smashing pumpkins tribute should be re-worked to indie/experimental style. one note though, "disarm" has already been covered.

Greetings to everyone! =A0 I am inviting everybody to listen in to a new talk radio show. The 'Inside/Out with Michael Levine' show is radio's Premiere celebrity talk show. The show features exclusive prominent figures from the Political, Business, Sports, and Entertainment arenas. The show debuted in April, and has attracted a diverse array of prominent figures from actors Dennis Weaver, Ed Asner, Buddy Hackett, Paul Logan(Days of Our Lives), to politicians Steve Soboroff, Peter Hidalgo(Pr.Sec.LA), Sherrif Lee Baca, to radio legends Gary Owens, Don Barrett, to legendary journalists/writers Jess Marlow(NBC), Vincent Bugliosi, to notables such as Betsy Streisand, Joan Benny(Jack Benny's daughter), Gary Chang(Composer), Dana Devon(Extratv), Bernie Brillstein and many more. Listen to our featured guests discuss current events, political and social issues, and a variety of topics.

The show airs live every Sunday night at 1Opm PST, 1am EST and can be heard by streaming audio at www.newstalk870.com and click on 'listen live'. The best part is, it is a live call-in show where listeners can interact with guests, asking questions, taking stances, or bring up topics of concern. The number is toll-free 1.866.870.KRLA. =A0 So listen in and call in!

Thanks for your time.

"INSIDE/OUT WITH MICHAEL LEVINE''
Live every Sunday at 10pm PST on
870AM KRLA

Subject: Time Magazine ads.

Hi all. I believe this is the 25th anniversary time frame for Dick and Bert's marvelous ad campaign "Puffy Sleeves", with great sketches for Time Magazine. About 15 years ago, I chanced to meet someone from an ad agency who passed along to me a vinyl album copy of the entire series of commercials. Allas, that album has gone missing astray after several moves. Does anyone have a copy of that album, entitled "Puffy Sleeves", which was the opener ad with the fella going out late at night to find a copy of the current Time and the policeman wants to know what type of house coat he's wearing?? Truly fun ads indeed!! Heres hoping someone might have them all.

2144. New STAGE LEFT episode on line: "Crime and Punishment II - The Screen"

Newsgroup: rec.radio.broadcasting

STAGE LEFT is a weekly mix of music, comedy and spoken word
produced at KDHX-FM in St. Louis. Listen to it any time with
RealPlayer at http://www.stageleft.org or
http://www.kdhx.org/listen.htm

The latest edition of the STAGE LEFT webcast went on line
Thursday (May 17). This week the subject is "Crime and
Punishment, Part 2 - The Screen". It's a solid hour of music
from films about crime, criminals and (of course) detectives.
We've got music from "Double Indemnity", "Body Heat", all three
"Godfather" films, "The Seven Per Cent Solution", a bunch of
Hichcock classics and even "The Producers" and "High Anxiety".
And, of course, news headlines from The Onion.

You can also get both the current episode of STAGE LEFT and
previous weeks' shows at http://www.stageleft.org or
http://www.kdhx.org/listen.htm The play list is at
http://playlists.stageleft.org We'll be archiving a month's worth
of shows.

Next Week (5/23): "My Way" - new solo CDs by Sally Mayes, Ron
Raines, and Lea DiLaria

However you feel about consolidation the FCC does not allow
monopolization by media companies. It doesn't serve your credibility
to make such statements that are so obviously false.

Monopoly means total control. If there are 25 stations in a market
and Clear Channel owns 12 of them, that's not a monopoly. You appear
to confuse total control with market dominance that makes competition
more difficult, but not impossible.

My latest copy of the Radio & Records Directory lists more than 100
group owners before you finish counting the A and B listings. I didn't
feel like counting through the entire alphabet so you can
statistically assume that there are many more hundreds of group owners
listed from B to Z. The Zimmers, alone, own quite a few stations.

We can all have opinions about the state of radio today and everyone's
opinion is just as valuable as anyone else's opinion. Let's at least
keep the terminology accurate so the issues don't get obscured by
inaccurate uses of terms like monopoly.

I never hear people complain that General Motors is a monopoly even
though there are far fewer car companies than there are broadcasting
companies.

In this newsgroup it's impossible to win if you're a group owner. You
complain about the Disney kids format. Disney has bought or leased
marginal facilities and done a format no one else has been able to do
with any success.

I guess the only solution is to turn back the clock to the 60's when
everything was terrific.

Let's forget the academic fussing about terminology for a moment and focus on the important issue of control, because that's the issue under discussion. The correct term is not monopoly, but "oligopoly." And while "monopoly" may not apply to one *company*, it can conceivably be applied to an industry's arrogant attitude. With the actions exhibited by the NAB in thinking its members exclusively *own* the airwaves, I don't believe this is an exaggeration. I doubt many would complain about an industry that operated with a heart. (While there are some fine - smaller - broadcasters, they are overshadowed by the behemoths we all know and dislike.) But I digress.

When the majority of a market's strongest, most viable signals are controlled by a minimal number of operators, the marketplace of ideas is effectively closed. The Commission, in its review of mergers and acquisitions, seems to have forgotten about the concept of the marketplace of ideas. All they base their decisions on is the balance of advertising revenue. There is a reason the FCC reviews station sales and it's not about advertising income. It's the public interest; how they got distracted and started worrying instead about advertising is a mystery. Excuse me, but what happened to the programming and service aspect of broadcasting? The public? Any concern about cross-ownership and the number of stations operated should be based on *public interest* not advertiser and station interest. Advertising issues, if at all, are secondary. Sure, it's a business, but this is a unique business, which brings me to my next point.

Rich makes an analogy suggesting radio and the vehicle industries are similar. However, with respect to Rich, it's an inappropriate example.

While anyone can launch a new line of cars (or Billy Bob's Burger Shack) anywhere and anytime they wish, one cannot do the same in broadcasting due to the limited real estate available on the dial. No license needed to build cars, no inherent limited entry to build that SUV. The radio business, however, is restricted to a finite number of stores based on the finite bands of AM and FM. Further, and more significant, is the concept that broadcasting - based on its nature of limited entry and great reach using a renewable natural resource - is a public service (some may say privilege) that comes with certain responsibilities that are not analogous to General Motors producing vehicles. (Even though the FCC seems to often forget this.)

Excluding Rich's analogy (I know he knows his stuff), equating broadcasting with most other commerce shows a basic lack of understanding of this unique business.

WCBN WILL DESTROY YOUR FEEBLE FORMATS

WCBN - Over 25 Years of Freeing Your Mind - Listen to us online!

WCBN is the University of Michigan student-run community freeform radio station in Ann Arbor, Michigan. We broadcast at 200 watts to the University and its surrounding communities from the basement of the Student Activities Building in downtown treetown. We have been broadcasting a genre-less overview of music, news, and public affairs for over 25 years.

WCBN's musical format is freeform, with some specialty shows. Freeform involves all different kinds of music, including jazz, reggae, blues, hip-hop, country, rock, and just about everything else under the sun. Instead of telling our DJs what to play, we allow them to select their own recordings from our vast and unique library. It is their responsibility to mix together many different kinds of music in an intelligent fashion, and show links between musical genres.

Click here to listen to our live WCBN-FM Ann Arbor broadcast!

2151. New STAGE LEFT episode on line: "My Way"

Newsgroup: rec.radio.broadcasting
Date: 2001-05-26 01:43:25 UTC
From: thedoge@pobox.com
Message-ID: <tgu2htldofdb30@corp.supernews.com>
Source record: 14312
Cross-posted to: rec.arts.theatre.musicals,rec.radio.broadcasting,rec.radio.noncomm,stl.general

STAGE LEFT is a weekly mix of music, comedy and spoken word produced at KDHX-FM in St. Louis. Listen to it any time with RealPlayer at http://www.stageleft.org or http://www.kdhx.org/listen.htm

The latest edition of the STAGE LEFT webcast went on line Wednesday (May 23). This week the subject is "My Way". The show features music from three new solo CDs: "Boys and Girls Like You and Me" (featuring songs cut from Broadway shows performed by Sally Mayes and friends), "His Way" (Broadway and other songs performed by Guy Haines) and "Play It Cool" (Lea DeLaria's new album of jazz renditions of Broadway and film tunes). We've also got music from Puccini's "La Boheme" in honor of the new Opera Theatre of St. Louis season.

You can also get both the current episode of STAGE LEFT and previous weeks' shows at http://www.stageleft.org or http://www.kdhx.org/programs/stage_left.htm The play list is at http://www.stageleft.org/010523.html We'll be archiving a month's worth of shows.

Next Week (5/30): "Tony Tones" - Music from some of the shows nominated for this year's Antoinette Perry ("Tony") Awards.

news:tgdfmkk5s7cp9e@corp.supernews.com...
> how do you calculate ERP (effective radiated power)?
>
ERP=(Transmitter power) - (line loss) + (antenna gain)
You can use dB or watts units, that is, dBm, dBW,
watts, kilowatts. I'm guessing you'll like watts.
Example: 100 w transmiter, line loss of 50%, gain of 5 times. ERP = 100
x 0.5 x 5 = 250 watts.

Most of the time we use dB but than is another story.
Regards, Dick Wilder

2153. Re: AM Fidelity

Source record: 14314

Am can sound good with a receiver with wide bandwidth. Most have
about +-5KHz (for a total of 10KHz). AM stations are double sideband,
each sideband containing the audio waveform modulated on the carrier.
IIRC, the FCC allows AM stations to broadcast up to 10KHz of audio
signal, for a total of 20KHz RF bandwidth. FM does about 16KHz
of audio. You can modify most AM radios to widen (at the expense
of sensitivity) the intermediate frequency (IF) amp by wireing across
each tuned circuit a resistor. Or just a few of them. A resistor about 100K
ohms would be about right. The resistor goes across the entire LC
circuit. It loads the LC circuit lowering the Q, widening the bandwidth.
You may hear a 10KHz whistle, that is from an out of town AM station
carrier one channel up or down. Use a graphic equalizer to notch out.

>now?

As I recall, they started off at their transmitter site in Hays County when they were KRMH (pronounced Karma.) Then they became part of the "Adavance Communications Center" (KIXL) off Lamar Blvd. Then Hicks (KNOW) bought them, changed the calls to KCSW and later KEYI and moved them to his building at Lamar and MLK. Then Rusk? (KQFX now KHFI) bought them and moved them to "the pretty office building" on Barton Springs Road. Now LBJ-S has them in their radio mall (5 fms and 1 am) on North I-35.

Since you're (probably) not under pressure to produce ratings or sell advertising, you should experiment. Some kind of unique format - these have worked:

- rockabilly
- comedy
- B-sides
- doo-wop
- obscure songs that were big hits but the oldies stations don't play (one guy here in Boston made a career out of 'lost 45s - and a lot of his song choices come from his listeners)

A lot of today's commercial FM formats "cut their teeth" in the late 60s and early 70s - through experimentation. A lot of it didn't work. Some of it did.

You have the luxury of not "me too-ing" -- often one commercial station is a success and everyone copies the format -- the morning man with the ditzy female sidekick, for instance. You're lucky, you don't have to do that.

Whatever you try may or may not work, but you'll have fun trying. The only thing to avoid is the assumption that because you like a group or song, that it will click. Here in the Boston area, too much college radio time is spent on droning heavy metal and punk records that frankly, aren't very good.

Since Disney could by good facilities if they wanted them, whey buy mostly second-tier signals and "store" them? It is perfectly legal for them to buy stations, Disney has the money or the lines of credit. What is stopping them. It certainly makes absolutely no sense to stockpile non-competitive signals for the eventuality of some new radio program offering.

Oh, maybe Radio Disney is intended to be viable business model for the company? Perhaps they are factoring in the value of branding Disney among youth as something that has both short and long term benefits to the company, even if Radio Disney is not a money maker.

$2 million for an AM station in a top 50 market is neither a good nor a bad price. It is just what facilities are worth these days. The fact that it is independently owned vs. group owned neither increases nor decreases the value of the facility. In the case of AM stations, value is a function of market size, day and night signal, directionality, dial position, existing format or revenues and obligations. This is the type of product development that shareholders love.

Radio stations are anything but a "cheap buy" today, with the last 18 months registering the highest prices in history for stations. Over $100 million for a Miami FM, $250 for an LA FM, and numerous high prices for AM signals in viable markets. Who would have suspected a daytimer in Chicago would go for over $10 million, or a totally defective suburban AM in New York City for $24 million? There are no bargain basement prices for radio stations. When you see a station go "cheap" you will usually find that it has a bad signal, has lost its transmitter site, has never made money, covers only jackrabbits, is directional away from the population centers... or all of the above.

2161. News Radio 1210 Michigan?

Newsgroup: rec.radio.broadcasting
Date: 2001-05-26 01:43:41 UTC
From: Ron Hardin <rhhardin@mindspring.com>
Message-ID: <tgu2id7p3qn73d@corp.supernews.com>
Source record: 14322

What station is ``News Radio 1210'' in Michigan? It seems to be
new.

WJZZ 1210 in Kingsley? I haven't heard them in while though.

Whoever they are, I'm pretty sure they're 100 Hz off frequency.
It could be another station but it's probably not.

Listening from Central Ohio.

>
>Thanks!

It should be no problem to put the phone on the air. Just use a speakerphone,
tap the speaker audio and bring it up on the board. You don't really need a
fancy expensive Gentner box (or equivalent) that that doesn't even null
properly. The mic on the speakerphone will pickup the DJ's voice so the caller
can hear him.

2166. WABC rewound on today (Memorial Day), streamed on Live365.com

Newsgroup: rec.radio.broadcasting
Date: 2001-05-28 21:19:42 UTC
From: Joel Rubin <jmrubin@ix.netcom.com>
Message-ID: <th5g7eqcaiem3d@corp.supernews.com>
Source record: 14328

I'm hearing WABC rewound by groundwave radio but according to the MusicRadio77.com message board, if you create or login to a Live365.com account and search for "rewound" you should find it.

Disney stations have AFAIK recently stopped streaming. How this fits into the ad streaming ban I don't know--I've heard both rewound PSA's (2 letter/5 digit phone number and postal zone) and current ads (Verizon, 888 freephone numbers) on the airwaves.

2167. Dallas 1620 AM

This evening I happened on a station that repeatedly ID'd itself as "Cadillac Radio" with two Announcers saying: "We're not a real radio station, and we are not real announcers either." This message was looped over and over, simply repeating itself. I heard this in my car about 6:15 PM Thursday May 24th. Any ideas what it was?

I'm big into OTR (oldtime radiodramas). Your in college, so recruit some guys from the drama school and start a home grown radiodrama!. First download some shows from alt.binaries.sounds.radio.oldtime using the agent newsreader. Listen to the beter ones like: x-minus-one (sci-fiction), lightsout (scarry), nightbeat (crime drama). Some of the good newer shows (and even curently made ones) include: nightfall (1980's canadian), vanishingpoint (same), imagination theater (current drame recorded in Seattle by Jim French (writer/producer/actor/creator of this show). Goodluck guy! ;-).

Newsgroups are like swimming with crocodiles at times.

Rich takes issue with me and assails my "credibility" with a retort that borders on the ad hominem. He likens my use of the term of monopolization as being a falsehood. He further states by example that if Clear Channel owns 12 out of 25 stations in a market "thats not a monopoly." He feels too, that I confuse the concepts of "market dominance" and "control." Add to this also his defense of the FCC to not engage in the blessing of monopolization. Rich takes literary license by obliquely referring to monopolization as a form of consolidation which demeans my original intent by shifting definitions around. Mr. Webster in his dictionary makes very clear distinctions between these terms.

I personally don't feel the necessity to rehabilitate my "credibility" with Rich or those who share this newsgroup. I will only respond by stating a few facts and will not engage in personal attacks.

Case in point. In the Ithaca, New York market there are 4 commericial licensees. Said licensees operate under the concept of PCN (Public convenience and necessity) which essentially is a justification for granting a license, rights or other forms of permission by the federal government to a private citizen and or corporation for the purpose of using a public trust. The other licensees of record in Ithaca are non profits which abide by a different covenant (college stations/NPR).

All 4 of the Ithaca commercial stations licenses, and they are: WQNY-FM; WYXL-FM; WHCU-AM & WTKO-AM are held by one corporate entity, namely Eagle Broadcasting. The ratio of diversity of ownership of these stations in this market is non-existent. Said combined, "consolidated" holdings do constitute a monopoly, even by Rich's own formula as referred to in the above. And it was with the approval of the FCC that this ownership arrangement was created. Its a matter of public record.

In the good ol' days monopolization by media companies had more flesh upon their legal structuring. For example, simultaneous newspaper ownership and airwave ownership was tantamount to creating a monopoly condition in a given market. Special consideration had to be given, even divesture of certain holdings within a given market or elsewhere had to be met before approval was given for airway acquisitions. Today, those safeguards are something of the past. Call it deregulation if you want, which is really re-regulation with less bite.

Despite Rich's protestations to the contrary, in the real world there is an ongoing phenomenon liken to the big fish eating the little fish and then that big fish is eaten by yet another bigger fish ad infinitum. Remember when the American Oil companies were referred to as the "Seven Sisters?"

How many sisters are left now?

Yes Virginia, there is monopolization and it ain't just for everyone else but media companies.

2173. music scheduler and data base

AM would sound even better if you got a radio that receives AM STEREO.
General Motors used to equip just about all of their cars with AM Stereo
radios, but these days only the Cadillacs have AM Stereo radios. But
there's still hope -- many radios can be easily converted to add AM Stereo
capability, at low cost and with excellent results. See this web site
for more information:

http://www.AMStereoRadio.com/

p.s. KAAM broadcasts in AM Stereo!

I am trying to locate the station and female DJ's name (not sure if she is a DJ though) - she works in or near OK City, probably an alternative/rock station. I think 5-10am weekdays and maybe part of a team. This may be a Clear Channel station also (but not sure). I know she does concert promotions and such for them also. I cannot seem to find her or a web site to hear them.

thx.
please reply with email also,if u can.

2180. New STAGE LEFT episode on line: "Tony Tones"

Newsgroup: rec.radio.broadcasting
Date: 2001-05-31 22:23:15 UTC
From: thedoge@pobox.com
Message-ID: <thdh2jfir3vuac@corp.supernews.com>
Source record: 14341
Cross-posted to: rec.arts.theatre.musicals,rec.radio.broadcasting,rec.radio.noncomm,stl.general

STAGE LEFT is a weekly mix of music, comedy and spoken word produced at KDHX-FM in St. Louis. Listen to it any time with RealPlayer at http://www.stageleft.org or http://www.kdhx.org/listen.htm

The latest edition of the STAGE LEFT webcast went on line Wednesday (May 30). This week the subject is "Tony Tones". The show features music from most of the shows nominated for Tonys for Best Musical and Best Revival of a Musical: "The Full Monty", "Jane Eyre", "The Producers", "Follies", "42nd Street" and "The Rocky Horror Show". And, of course, news headlines from The Onion.

You can also get both the current episode of STAGE LEFT and previous weeks' shows at http://www.stageleft.org or http://www.kdhx.org/listen.htm The play list is at http://www.stageleft.org/010530.html We'll be archiving a month's worth of shows.

Next Week (6/6): "Critics' Choice" - Our special guests are theatre critics Bob Wilcox and Jerry Kowarsky. Bob reviews for KDHX, Jerry for The St. Louis Post-Dispatch, and they team up for "Two on the Aisle" on local (St. Louis, MO) cable. They'll play some of their musical theatre favorites and talk about the music with Amy and me.

Hi Everyone,

I Just wanted to remind everyone that tomorrow night Thursday May 31st is the next 5th Thursday Collins Collectors Association AM Night. We will be starting at 08:00PM CDT on 3885 kcs. Jim W0NKL will be master of ceremonies for the evening with others assisting. Remember! Damn the Static! Full Speed Ahead. (my apologies to the originators but I thought it was close) Please come and join us tomorrow evening. We have ordered a static free evening from the same people that ordered Fridays WX at Dayton.. They assured us that THIS time they would get it right! Stop by and see how close they were.

73's
Larry WA9VRH
Assistant Net Manager
VP, Collins Collectors Association

P.S. Remember the Collins Collectors Associations First Wednesday AM Night on June 6th. Starting at 2330 on 3880 kcs with our East Coast Anchor then moving across the county by time zone! 73's Larry

I have several friends that work for religious broadcaster Salem Broadcasting (owner of WHK-AM Cleveland, WHK-FM Canton, WKNR and one or two other area stations). I moderate rec.radio.broadcasting, almost went into broadcasting as a career, and like to think that I can keep track of all of the changes in the local radio scene, and yet this format change took me completely by surprise! :)

Friend who's playing poker with us: "So what do you think about the stuff they're playing on 92.3?"

Me: "Ok, I think disco sucks, but I love Motown."

Friend: "Uhhhh... They changed formats on Friday."

So... here are some details.

92.3 is owned by CBS, Infinity, Viacom or whatever the hell they're calling themselves this week.

The Jammin' Oldies format was created by AMFM Communications a few years ago, and initially was broadcast exclusively on AMFM's stations.

Then AMFM merged with Clear Channel Communications. Clear Channel already owned as many stations as the Department of Justice would let them own in Cleveland (due to antitrust issues), so they spun off *all* of the AMFM properties to other companies. 93.1 WZAK and the Station Formerly Known as 107.9 The End went to Radio One. Radio One flipped 107.9 to rap and changed the station's name to Z107.9. WZAK is still running R&B and soul, with some rap thrown in for good measure. Radio One got WERE-AM too.

92.3 The Beat, 98.5 WNCX, and Q104 went to Infinity. If I recall correctly, WDOK 102.1 and WRMR 850 also did, and Infinity still has WDOK... WRMR went to Salem. (Someone please correct me if I'm wrong)

Apparently, the Jammin' Oldies format has not been doing well, from what my friends at Salem tell me. Besides (and this is only my opinion), Infinity may not have wanted to run a format that some other company made popular...

So... they flipped on Friday.

What is interesting is that they have competition that is playing a lot of the same stuff. WMMS in Cleveland and WRQK (Rock 107) in Canton both play a format called "active rock" that has a lot of the same stuff on the playlist that Extreme Radio has. There's a lot of duplication, although it wouldn't be the first time... WGCL and Power 108 both played Top-40 (at least for one year... 1986... than WGCL flipped and became classic rock WNCX). Power 108 and Jammin' 92.3 played a lot of the same stuff for several years in the early 90's. Hell, I can remember WGCL competing with what used to be B107 out in Elyria (107.3... now they're a "Smooth Jazz" station, and they have been for a number of years, but both stations used to play Top-40).

And, for a year or two, WMMS tried to compete head-on with 107.9 The End, playing alt-rock.

But I just don't see how this new format is going to succeed, although I have to admit that (unlike you, apparently) I like the playlist.

>Cleveland radio has always sucked, in my opinion.

Late 70's and early 80's were the Golden Age... WGCL, WMMS, and several other stations really rocked... But now radio sucks pretty uniformly everywhere, if you don't have very specific tastes. I still listen to radio a lot, but the 21st-century business model has a lot of limitations.

Basically, you have a couple huge players (Clear Channel, the largest radio owner in the country, and Infinity, CBS's radio division), a number of smaller (but not tiny) players, and some independents, but it's the huge players that set ad rates and dictate market direction.

I found out from a guy I talk to who works at 102 Zoo in Ashtabula that Clear Channel bought them at the end of last year! OK. Cleveland's a top-25 market. I can even understand Sandusky - they own two or four stations there. Tiny town, but it's a resort town, and there is lots of potential for advertising bucks, especially during the summer. But Ashtabula? Or Findlay?! Not that there's anything wrong with either of those small cities, but those are not cities that I thought Clear Channel would be interested in.

(Actually, I think Mix 100.5 in Findlay is the station that the former owner of 102 Zoo used to run. He owned stations out there too. But that's besides the point...)

>Cleveland has way too many stations that play the same stuff--100.7,
>98.5, 106.5 and Akron's 97.5. No one plays the kind of music I listen
>to, alternative (80s to current stuff).

When 107.9 The End flipped, there was some discussion of this in rec.radio.broadcasting. The station *never* had good numbers. It was said that Clear Channel only held onto it because 98.5 was making the company tons of money, and they could afford to hold 107.9.

Look at this statistic: There are two very successful COMMERCIAL Alt-rock stations in Ohio. One is WWCD (CD-101, Columbus) and the other is WOXY (97X, Cincinnati).

Now look at the demographics.

Columbus has a college with 100,000 students enrolled there. And that's just the major university.

The Cincinnati market has a number of smaller colleges: U of Cincinnati, Xavier, Miami of Ohio. Plus, if you have a decent radio, you can get 97X in Dayton, where there are two *more* schools.

See where I'm going with this? There is a huge audience for alt-rock downstate. As much as I'd like to see The End come back to Cleveland, though, we don't have the demographics to support it.

My opinion, worth exactly what you paid for it.

WCBN WILL DESTROY YOUR FEEBLE FORMATS

WCBN - Over 25 Years of Freeing Your Mind - Listen to us online!

WCBN is the University of Michigan student-run community freeform radio station in Ann Arbor, Michigan. We broadcast at 200 watts to the University and its surrounding communities from the basement of the Student Activities Building in downtown treetown. We have been broadcasting a genre-less overview of music, news, and public affairs for over 25 years.

WCBN's musical format is freeform, with some specialty shows. Freeform involves all different kinds of music, including jazz, reggae, blues, hip-hop, country, rock, and just about everything else under the sun. Instead of telling our DJs what to play, we allow them to select their own recordings from our vast and unique library. It is their responsibility to mix together many different kinds of music in an intelligent fashion, and show links between musical genres.

Click here to listen to our live WCBN-FM Ann Arbor broadcast!

2186. standing wave problem

Newsgroup: rec.radio.broadcasting
Date: 2001-05-31 22:23:43 UTC
From: fmksey@aol.com
Message-ID: <thdh3f2ar7mlbe@corp.supernews.com>
Source record: 14347

maybe someone can help me with this or understand. i have an omni 1000 watt transmitter and tower is shunt fed. most recently, standing wave was higher than usual and xmitter would overload with modulation. messed with atu, modulation and xmitter settings. i was able to stop the overload but reflected was higer than
usual. (was always at about 0 and went up to 2/4 percent). today i noticed that a clamp on the outside of the building that holds the line up to the tower had come loss from the building. as a result, the line was not streached tight and likely swaying with high wind. i reconnected the building clamp and the problem has gone away. would something this simple, cause such a problem?

this problem cropped up right after a lighting storm. i want to get an idea that the loose line was the problem before i stop looking for lighting related damage

thanks

mark

Lowering the Q of a double tuned IF transformer by adding resistors,
without changing the coupling between the primary and secondary may
actually be counter productive. True it will widen the skirts of the IF,
but I think it can actually narrow the nose bandwidth of the transformer,
depending on the coupling coefficient of the original transformer.

Yes. This was a talking billboard. There's one on Central Expressway near Northwest highway. It doesn't broadcast far, but it's a billboard for cadillac.

>http://www.AMStereoRadio.com/
>
>p.s. KAAM broadcasts in AM Stereo!

That's an interesting web site you have. Evidentally Crawford Broadcasting is on top of the AM stereo world. It is too bad they don't let their listeners know about it.
Those who like KAAM, (despite its rather confused programing) might actually demand AM stereo receivers in their cars and homes, if they knew that something better was available. The stationn's demographics indicate they can afford to pay for it. Unfortunately, KAAM makes no mention of AM Stereot at all.

Sadly, I believe they are destined to failure on the AM Stereo front.

I'd like to be proved wrong.

Chuck

From 'Bill':

>Newsgroups are like swimming with crocodiles at times.

Not this one, if I have anything to say about it.

>Rich takes issue with me and assails my "credibility" with a retort that
>borders on the ad hominem.

I haven't had time to read all of the threads. I will, however, remind everyone that I am moderating this group in exactly the same manner as Bill Pfeiffer did it. I try to be broad in what I'll accept, and there's actually very little I won't post. But he didn't tolerate flames. Nor will I.

>He likens my use of the term of monopolization
>as being a falsehood. He further states by example that if Clear Channel
>owns 12 out of 25 stations in a market "thats not a monopoly."

No, it's not, it's greed. :) Monopoly implies ownership of all outlets in the market.

>All 4 of the Ithaca commercial stations licenses, and they are: WQNY-FM;
>WYXL-FM; WHCU-AM & WTKO-AM are held by one corporate entity, namely Eagle
>Broadcasting.

That would be a monopoly, in my non-lawyerly opinion.

>Despite Rich's protestations to the contrary, in the real world there is an
>ongoing phenomenon liken to the big fish eating the little fish and then
>that big fish is eaten by yet another bigger fish ad infinitum. Remember
>when the American Oil companies were referred to as the "Seven Sisters?"
>How many sisters are left now?

Exxon (Std Oil/NJ) and Mobil (Std Oil/NY) are now one company.
Chevron (Std Oil/CA), as far as I know, is still independent.

Gulf was bought by Chevron, and the only Gulf stations that I know of are in the Northeast (NY, MA, PA in particular, with a couple in the Cleveland area and elsewhere in NE Ohio that haven't closed shop yet)

Texaco, as far as I know, is independent, but Chevron is trying to merge with then, according to http://www.gravmag.com/oil.html .

According to that page, since Gulf no longer exists, and there are only six original sisters, some people count Amoco (Std Oil/IN) as a Sister.

But now BP and Amoco have merged.

And ironically, in 1991, BP took over the last vestiges of the one remaining company that was allowed to use the Standard Oil name: Sohio -- Standard Oil of Ohio (in a process that I understand started in the late 1960's).

Shell is still independent, and was never a Standard Oil subsidiary; it's not even a US company.

>Yes Virginia, there is monopolization and it ain't just for everyone else
>but media companies.

It's everywhere.

>i reconnected the building clamp and the problem has gone away. would something this simple, cause such a problem?<

It sure would. The clamp coming loose, and the line swaying in the wind, both contribute to a change in the line characteristics, which will change the load the transmitter sees.

I sure hope you marked the ATU settings you said you tampered with, and put them back where they were (with the transmitter off, of course). If I were you, I'd also look for lightning damage, even if things appear to be back to normal. Sometimes lightning damage won't become evident immediately, and according to our pal Murphy it will rear its head at the most inopportune time (3 AM in the middle of a holiday weekend is about right). Check everything you can before you close the book on this one.

Philips-Magnavox radios with digital tuning use LC IF filters, for excellent sound on the AM band. In fact, these radios use a tuner module that is made in Austria. This module also provides connections for the easy addition of an AM Stereo decoder circuit; for more information, go to: http://www.AMStereoRadio.com

Gene Heskett sends Greetings to Fmksey ;

>maybe someone can help me with this or understand. i have an omni 1000 watt
>transmitter and tower is shunt fed. most recently, standing wave was higher
>than usual and xmitter would overload with modulation. messed with atu,
>modulation and xmitter settings. i was able to stop the overload but
>reflected was higer than usual. (was always at about 0 and went up to 2/4
>percent). today i noticed that a clamp on the outside of the building that
>holds the line up to the tower had come loss from the building. as a result,
>the line was not streached tight and likely swaying with high wind. i
>reconnected the building clamp and the problem has gone away. would
>something this simple, cause such a problem?

>this problem cropped up right after a lighting storm. i want to get an idea
>that the loose line was the problem before i stop looking for lighting
>related damage

Anythng that effects the rf end of things is going to have an effect.
The effects can usually be tuned out, but to do that, it all has to be
physically stable, as in fastened down correctly.

Cheers, Gene

first of all, KC and the Sunshine Band, Donna Summer, The Gap Band and the like are hardly what anyone would call "Motown." more like '70s top 40. furthermore, "needed" is strictly a matter of opinion. i say 92.3 The Beat is needed, you say 92 Extreme is needed. there are plenty of other styles of music not played on Cleveland airwaves. none are more important than the other. it's all a matter of numbers, not what's "needed".

the format change of this station further continues my resentment for current mainstream music and the sad state of commercial radio. i will continue to seek out music that suits my tastes and not the tastes of some faceless program manager whose pockets are lined by the major record labels, all of whom don't give a shit about what kind of music i need but rather how much money they need (want).

yippee, they're now playing Primus. but in a few months i'm willing to bet you'll be begging them to stop playing the same one or two songs by them over and over again. we'll see what's "needed" then.

I'm trying to find a schematic for an old Gates FM 1kW transmitter, circa 1974. Specifically, the exciter, model 992-1773-001, which has gone whacko.

I've been searching for hours and I have hit a dead end. Does anyone know of a site which has an archive of old broadcast schematics? It would be greatly appreciated.

Thank you!

Chris,

Go to http://www.a-ware.com/ and check out MusicMasterLT. It's a "lite"
version of their increasingly popular software program called MusicMaster..

When I bought my copy of MusicMasterLT a few years ago, it was less that $400
bucks. MusicMsterLT is <or at least was> a buyout program. I think it still
is but I'm not 100% sure.

The 3 main ones are Selector (www.rcs.com ?), Powergold (www.Powergold.com ?) and Music-Master (www.a-ware.com ? Note the hyphen.)

Also check out http://www.broadcast.net They can link you to most of the manufacturers websites of close to everything for a radio station.

Ray Dennis wrote:
> Everytime I am out on the road, I find fewer AM stereo stations.

Over 400 stations in the USA broadcast in AM Stereo, and more are being added to the list every week. However, Clear Channel Communications seems to have a policy of requiring all of their AM stations to broadcast in monaural. So if a station gets bought by Clear Channel, the Stereo is turned off, even if it works well with the format and the listeners appreciate it. There are a few exceptions, like Clear Channel-owned KABL 960 AM Stereo in San Francisco, but those appear to be associated with highly valued station engineers who have "the station stays in Stereo or I quit" in their contract.

On the other hand, there are some companies who are notably supportive of AM Stereo, and are known to *add* AM Stereo to stations they acquire, including Infinity, Crawford, Greater Media, Mega, and Multicultural Media.

For Sale an FM station in a small town in Santa Rosa, New Mexico (USA!) on I-40.
It is on the air, a Class A that can be upgraded to at least C2 (50 kw). I built the
station for the owner of the AM station in Santa Rosa, and about the time the station
was completed the AM station owner died. The station is on the air, simulcasting
the AM, and is being operated by the family of the deceased owner. I'm looking for
about $100k for the FM, and you could probably get the AM for about $50k. Please
e-mail me directly at dondavis@graffiti.net for details. If I do not locate a buyer soon,
I am going to operate the FM station gung-ho and probably buy the AM. These

stations, while in a small town, do represent a rare and real opportunity for a first-time
owner. A few years ago, I would have loved to have this opportunity!!
Thanks, Don
Davis

>

Except that the Ithaca MARKET has 9 stations, according to the "viable facility" criteria of BIA. BIA is usually the source of record for references to stations in a market and the viability of same. There are 4 class B FMs and a viable A; there are 4 viable AM stations.

While 4 out of the 9 seems to be really close or above the FCC and DOJ limits, it is not a monopoly as the market is not fully controlled by that group.

Does anyone have, or even remember, a musical version of the old EBS test that Stan Freberg recorded some years ago?

It was a musical take-off on the old "This is a test of the Emergency Broadcast System. The broadcasters of your area etc etc."

I played it a couple of times years ago, and we had people calling in requesting that we run EBS tests!

Program director quoted a non-existant FCC rule, and erased it.

I know we can't use it officially anymore, but it would be funny to play anyway.

From: buhthead@aol.com
Message-ID: <ti052r2ep01e61@corp.supernews.com>
Source record: 14195

I've used Radio Shack's ~$30 in-ear headphones for about a decade -- say what you want, but these things sounded pretty good. It is now time for another new set, but they're not made anymore. Everything I've come across in stores is either obviously cheap or doesn't measure up in terms of quality. For example, I picked up Sony's better "sport" in-ear headphones based on the recommendation of a Sony rep, but they don't make the grade for me.

So, what can you recommend and where would I get it?

A goodly portion of these are X-band stations that have to go stereo to meet the terms of the X-band license. Outside of these stations, very few converts to stereo are being seen, and they don't keep up with the stations dropping it.

From: David Berchtold <berch@erie.net>
Message-ID: <ti0530rnbtpf66@corp.supernews.com>
Source record: 14199

I am both a radio station fanatic and a computer fanatic. I love to visit radio station web sites over the internet. When technology made it possible to stream audio over the internet, I thought that this was the best thing ever to happen in one's life. It was possible to hear a radio station from Hawaii in my home here in Erie, Pennsylvania. It was truly a wonderful thing.

Now, it seems, a number of radio stations are "temporarily suspending" their audio streaming because of _____. I am well aware of all the excuses I've seen. I'm also aware of the fake promises of "Coming Back Soon" or "Will Return". It would be better to say "Don't Hold Your Breath!"

I really hope that audio streaming on the internet has not met with an untimely demise. Radio and The Internet just seem to be a natural fit.

STAGE LEFT is a weekly mix of music, comedy and spoken word produced at KDHX-FM in St. Louis. Listen to it any time with RealPlayer at http://www.stageleft.org or http://www.kdhx.org/listen.htm

The latest edition of the STAGE LEFT webcast went on line Wednesday (June 6). This week the subject is "Critics' Choice". Our special guests are theatre critics Bob Wilcox and Gerry Kowarsky who play and discuss music from some of their favorite shows. Bob reviews for KDHX-FM, Gerry for the St. Louis Post-Dispatch, and they team up for the local cable TV theatre review show "Two on the Aisle". You can also get both the current episode of STAGE LEFT and previous weeks' shows at http://www.stageleft.org or http://www.kdhx.org/ listen.htm The play list is at http://www.stageleft.org/010606.html We'll be archiving a month's worth of shows.

Next Week (6/13): "New and Improved" - A program of new releases, including Kristin Chenoweth's new CD "Let Yourself Go" and songs from the cabaret show "Doris and Me" by Australian cabaret artist Janet Seidel.

> Stereo AM will be back as a permanent feature of AM broadcasting when
> the AM band goes digital.

Fat chance. Most of the AM stations experimenting with digital broadcasting (IBOC DAB) today are ones with monaural studio equipment. Thus there is no way their digital signals can be Stereo.

And I don't think digital broadcasting on the AM band will ever be approved for full-time use. At least with the systems they are testing now, the digital data signal occupies the 5 to 10 kHz portion of a station's audio space -- therefore it will cause horrible splatter to any neighboring stations! And that also means the analog audio response will be limited to 5 kHz, for a very dull and telephone-like sound (compared to the full 10 kHz audio response that AM stations currently use). I've also heard that if two digital AM stations are next to each other, one will have to be 30 times stronger than the other for you to be able to hear it!!

There are similarly bad problems with the digital FM broadcasting system. There is no question that digital broadcasting will arrive eventually -- but, like the entire rest of the world, it will be using a new band that is separate from AM and FM, and the existing AM and FM bands will be left alone because there is simply too many problems with "squeezing" the digital signals into them while retaining compatibility with regular radios.

The Cadillac radios might be stereo, but I wouldn't say much for them otherwise. When I had the '96 DeVille, I lost all AM reception all of a sudden one day (FM seemed to be normal, but the only time I could get any AM reception is when I was driving by the tower site)...I brought it in, they checked the antenna connection and finally had to swap out the radio altogether. It was fine for a couple months and then crapped out again. I solved that problem by trading cars, but now I'm having the same trouble with my '99. (Poor reception of anything but local stations, lots of static. etc. FM reception never seems to change.)

After reading this (below) I emailed KABL this afternoon, citing the alleged Clear Channel policy and remarking that the stereo provides me with major enjoyment when listening to the station.

I got an almost immediate reply from Program Director Clark Reid, saying that I am in the definite minority, that he isn't aware of such a company policy, but that he would turn of the stereo in a minute if it would improve coverage.

Are there any BROADCASTERS any more?

I'll venture a guess as to why KMEO is in mono.

ABC recently fired up KESN 103.3 carrying ESPN Radio from the Collinsville tower, about 65 miles north of Dallas. They're in mono and the signal is outstanding.

Sister rim shot KMEO 96.7 has they're tower way the heck out north by northwest of Fort Worth. We're in the summertime tropo season where interesting things can happen with the signal particularly in the early morning/sunrise hours.

Here in Dallas that means the signal is attenuated to the south of the tower site.

Since a stereo signal will always have reduced coverage and noise, I'm not surprised that based on the KESN experience KMEO would follow suite.
I'm guessing for them it's more important to be heard than to be heard in stereo. Given the format (soft Barry Manilow etc.) and the target audience (older women), perhaps stereo is not important.

This could be a trend here, and in other markets with a high number of rim shots who have handicaps covering the ADI.

100.7 the Word has been mono since their swap with sister KLTY, no doubt for this same reason (or in this case guess).

This is something that affects all the rim shotters in this area, and even those on Cedar Hill. More than a few mornings per summer Channel 8 in Houston gives Channel 8 here fits on my rabbit ears set in the kitchen.

If the spend the money for a digital transmitter, why wouldn't they buy
stereo audio equipment. Distressed stations won't do either, of course.

> And I don't think digital broadcasting on the AM band will ever be
> approved for full-time use. At least with the systems they are testing

WILC in laurel, MD, has been on the air with IBOC stereo for a number of
months. It completely smothers the first channel on either side of them,
but does not affect farther out.

> And that also means the analog audio
> response will be limited to 5 kHz, for a very dull and telephone-like
> sound (compared to the full 10 kHz audio response that AM stations
> currently use).

... almost all AM receivers cut the response around 3 or 4 kHz ....

> I've also heard that if two digital AM stations are
> next to each other, one will have to be 30 times stronger than the other
> for you to be able to hear it!!

In principle, the FCC never assigns stations in the same area closer
than 30 kHz apart. Even if they were 20 kHz apart, the digital signals
weould "just touch".

That said, the FCC basically only believes in local listeners these
days. With this view, all stations you 'should' hear meet the above
criterion.

While I question whether IBOC is a Good Idea for either AM or FM, I
doubt that it will bother most listeners, I expect it will be a
disaster for AM DXers, and maybe for FM DXers as well.

>to change.)

I'm surprised to read this. The Delco tuner in my '92 El Dorado, both
on AM stereo and FM stereo, is superb in every respect. It was one
of the features that helped sell me the car. The trouble I've had is
two failures of the crappy outboard Bose amplifiers on each speaker,
(one actually caught fire), and a mechanical failure of the CD player.
I've kept it because the tuner is so good, and there's a guy in SoCal
who bought a container-load of these things surplused by GM, and
cannibalizes them for parts to repair them, at a cost quite high but
still far cheaper than replacing the whole stereo (or the whole car).
The Cadillac dealer only wants to do replacements.

I do have a problem similar to the one you describe with the Delco
radio in my company-owned '94 Chevy Blazer (the full-sized model now
called a Tahoe). The AM, mono or stereo, is full of computer noise.
The Chevy dealer can fix it, but the repair normally lasts no more
than a week, so I gave up on it.

Normlehf wrote:
> but that he would turn off the stereo in a minute if it would
> improve coverage.

Speaking of which, that is one of the biggest myths about modern broadcasting technologies. It is simply false that using AM Stereo reduces signal coverage by any detectable amount. As proof, back in 1993 when the FCC decided on a single standard for AM Stereo broadcasting, they noted that out of the over 600 stations that had converted to AM Stereo by then, not a SINGLE one of them had complained to the FCC about a loss of coverage due to AM Stereo.

Along with this is a similar myth about "loss of loudness". This is also completely false, because AM Stereo stations use the same modulation levels (125% positive, 100% negative) as mono stations, and the Stereo audio is specially processed so that if there is audio only in one channel (Left or Right only), mono listeners do not notice any decrease in loudness -- unlike FM Stereo, where on a mono radio, single-channel audio would only come out half as loud as if it were in both audio channels.

Many years ago I did a radio show in Atlantic City (WMID-AM) with a partner. The WOR air staff was broadcasting from the Atlantic City Convention Center one day and we asked for a phone interview with Ms.Francis. She was minutes from being on the air herself, but she consented to the interview against her producers wishes (which we understood!). The interview she did with us lasted until literally seconds before her own show started. She was gracious, friendly, and had a wonderful sense of humor. We were always a fan of her interview style, but after that day we knew first hand why she was so great on radio. "Big Time WOR Radio Star" talking to us "nobodies" and at a most inconvenient time for her. We will always remember that.

From 'grumpy@en.com':

>Heard a new station for about 2 weeks now on 90.7 in Cleveland/Parma
>(Pearl and Snow).

Well, now... this is interesting.

I see from searching the FCC database that there is a 90.7 licensed to Norwalk, Ohio, about 20 miles south of Sandusky. It's listed twice, with one licensee listed as Cleveland Public Radio and the other as Kent State -- both entities run public radio stations (WCPN and WKSU, respectively), but this is still rather odd.

There does not appear to be a callsign assigned to either CPR or Kent State.

The closest station on 90.7 other than Norwalk is WKTL-FM in Struthers, a suburb of Youngstown. It's listed as being licensed to the Struthers board of education.

Weird.

Why are there two licensees for 90.7 in Norwalk?

It appears as though the worst is over. Many stations in the midwest have
started streaming again.
I always wondered why there was any debate in the first place. It costs
significantly to stream audio and there are no financial benefits yet.
Most stations do it to support their existing listeners. Everyone wanted a
piece of the streaming pie, except there was no pie.

Even without the US radio station feeds, there are still thousands of
webcasts available on the net, plus all the "hobby" webcasts that are
provided by such companies as live365.com. Of the commercial US
stations that did cease webcasting because of ad agency pressure,
some, in fact, have returned to the net airwaves sans commercials.
Maybe you can't find your local, or non-local favorite, station
anymore but there are certainly a plethora of alternatives around.

>Thus there is no way their digital signals can be Stereo.
>
I don't think studio equipment has much to do with the big picture. In the grand scheme of things, it's relatively inexpensive and just a minor technical detail. If you pay $60,000,000.00 for a station, a few hundred thousand to upgrade the studio is simply irrelevent.

You'll probablly spend more with the interior decorator.

IMHO, IBOC is doomed to the same fate as AM Stereo. There is very little incentive for FM broadcasters (who paid that kind of money for their stations) to allow AM's to broadcast a signal that is comparable to their own. It's simple econonics.

If you have any doubt about this statement, I urge you to "follow the money." You'll see what I mean.

I do think we will get some form of digital broadcasting, other than via satellite. Somehow, I doubt that it will be anytime soon. It seems locical that we should follow the rest of the world with their digital standards. Why? Not because it's necessarilly better, but because more fortunes can be made with new spectrum allocations.

I hate to be so negative, but I'm afraid that the "money changers" have total control of broadcasting as we know it.

2275. What Makes A Great Radio Manager

Newsgroup: rec.radio.broadcasting

What Makes A Great Radio Manager

One of the hardest things to do for any creative person is to delegate. Delegation is also one of the hardest things to find in radio management today.

Sadly, as experienced management is driven from the industry people are being given responsibility at an ever greater pace: first time GM's trained under post-deregulation GM's.

A person will be promoted to at least one step above their level of competence. The Peter Principal: and it has a cause.

The same thing that begets promotion is the tactic used by sales to actually sell: selling oneself. The problem comes in when ownership mistakes that salesmanship for ability.

Since revenue is the primary goal of any business: radio ownership has determined that managers most likely to make revenue goals are those whos function have been the acquisition of revenue. A long-winded explanation for why sales usually turns into management and programming does not.

Continuing to sell their selves, these inexperienced 'managers' will accomplish their goal of revenue by acquiring it. They can do that by selling more or they can do that by costing less.

Experience in business will tell you that nothing was ever sold that didn't cost something to both make and sell unless it itself was nothing.

Ownership may still be cranking at the speed of business logic but accepting revenue goals made for the wrong reason is no different than accepting one's own murder.

It does matter how revenue is made or acquired. It is called; ethics.

Ethics is normally the one tell tale clue to watch for when looking to identify a great manager or a great salesman.

Another is delegation.

A person who delegates: is showing the world they are not using the person they manage for personal gain.

Creative people have the hardest mountain to climb in delegating both essential parts of a manager's job: authority and responsibility. And they do it by misinterpreting creativity with authority.

Just because they have wonderful ideas does not mean they should have the responsibility to execute those ideas. The perspective of the person thinking is never the same as the person doing the acting.

The great radio manager will set forth the vision. The vision is the enunciation of the idea. The manager then either creates or establishes the mechanism to carry out the idea and hires personnel to accomplish the task. Each layer of task requires a manager to create his or her own perspective of the vision in order to lead the employees they manage to a proper execution of the vision.

A radio manager who is not great will not only impose the mechanisms but will also dictate the execution starting with 'what' and not stopping with 'how'.

A manager who can delegate 'how' may be a great manager.

Think about it: If a manager does not delegate the manager is not able to manage.

Sadly again, the trend is to sell oneself to the point of being nearly impervious to what ever those horrible employees do or do not do. This accounts for totally horrible managers continuing to keep their jobs when sales goals are not met or programming goals are not met.

There was once a manager who never set a goal for ratings, never set a public goal for revenue, never left the building to make a sales call, never kept a sales manager for longer than six months, went through three PD's in literally weeks, has not made a corporate profit goal yet, actually asked a female employment candidate in an interview if he could get into her pants, after hiring her most likely did, could not have a creative thought of his own and was faced with a consultant who was signed on to the just launched format change and had helped in its creation and a PD who created the format and had the loyalty and respect of the staff.

That manager replaced the consultant, hired a total brain dead wash-out to consult, got the new consultant to keep his job by using him to urge the PD to leave, refused to talk additional years when the PD's contract expired, changed the format in the middle of its first book, sold three hour infomercials on the phone in PM drive (the PD's shift) in order to reduce the PD's personal success potential, pulled the station's book promotion half way into the first book and then gladly accepted the PD's resignation.

Now that is not a great manager. Too many tell tale signs. But he's still the boss. Sells himself well. After all, "I never hear him say anything bad about you" is probably the best compliment an unethical person could ever be quoted.

If you manage, please establish 'what'. Hire people to accomplish 'what' by managing 'how' and let them do it. Your job as manager is to keep focus on 'what' while a great manager will do that by tweaking 'how' just to keep it toward 'what'.

If 'what' is wrong we can only hope ownership sees 'what' instead
of 'who'.

David,

If you haven't already done so, why not stop by www.keom.fm and listen to this station?

KEOM is, if I am not mistaken, the first "public school district owned station" to ever stream its signal on the web.

Best of all it's commercial free!

I remember it well! "in voluntary cooperation with the F...C...CEEE"
"had this been an actual emergency (ohhhhhhh)" and the final duck
quack at the end. It was great and we used it at a few stations that I
worked at. Management didn't care for it and due to the prevailing
paranoia of the day (ie. the big bad FCC), it was eventually pulled.
It was legal in every way but the government had NO sense of humor
back then. Unfortunately I don't have a copy of it but I seem to be
able to replay it in my head anytime I want to. I hope you find a copy
of it Jay. It seemed to be on everybody's outtake reel way back when.

2281. Audisc "Slow "Playback

Newsgroup: rec.radio.broadcasting
Date: 2001-06-14 19:08:12 UTC
From: jayscott16@aol.com
Message-ID: <tii2ssiajea90@corp.supernews.com>
Source record: 14242

Two time in the past two weeks one particular "cart number" on our audisc plays back and sounds kind of like a tape recorder used to when it was dragging on playback--low and slow. However, the time clock on the playback is not impacted, (reads accurately) and the next time we have used the "cart" it has worked fine.

Could it be that the darn thing is not getting all the audio that is being sent to it, and is compensating by elooooooongaaaaaatiiiiiiinnnnnggggg whaaaaaaat it dooooeeeess geeeeeeeet??

Our contract engineer, and resident computer experts, are all astonished. (which isn't real hard to do).

I think you're going to find you're out of luck on this one. I don't know of a single LA AM station broadcasting in stereo anymore. Sadly, that's a feature that long ago became irrelevant to radio broadcasters.

>I'm guessing for them it's more important to be heard than to be heard in
>stereo.

I'm going to guess that the folks at KMEO are giving this a try to see if many people will notice. If they do notice and don't like it, they'll turn on the stereo exciter. If ratings go up and people don't complain, they'll keep it mono forever.

If you think about what they're trying to do, stereo isn't that important. They want to be the station people listen to at work and the station women listen to at home during the day. That may not include many big stereo recievers. Also, I suspect that listenership in cars is not a big deal for them. That would be the main place where I think the lack of stereo would be obvious.

Bob wrote:
> ... almost all AM receivers cut the response around 3 or 4 kHz ....

As for *flat* response, that may be true. But keep in mind that AM stations use treble pre-emphasis (just like FM stations), which equates to about 10 dB of treble boost at 10 kHz. This leads to a much crisper and clearer sound, even on normal "low-fi" AM radios, than if the stations had a sharp cut-off at 5 kHz. In fact, even though it may be many dB down, many AM radios have audio response to past 15 kHz. I am putting out nearly 20 kHz of audio bandwidth with my own low-power AM Stereo transmitter, and that extra bandwidth does make a noticeable difference, even on cheap low-fi AM radios. For example, the Realistic TM-152 (a popular AM Stereo radio of the 80s) is only rated for a flat response to 4 kHz, but with some tweaking of a graphic equalizer, it can have audio response that is flat to at least 13 kHz!

The AFTRA contract for voice overs was redone late last year.

None of the current negotiations have anything to do with that.

> Can Ron Jacobs topple the Telecom Act?

Nope. One person can only light the candle. He cannot carry it all over the country.

> Should he?

This presumes he can. But to answer the question. No. It is a republic.

> Can radio be the way it was in 1965?

Nope.

> Should it?

Nope.

> Comments?

I answered the last two questions in the mode most people assume. When referring to 1965 radio people tend to think format instead of ethics and business sense. Ethics were never there much anyway, but business sense was. When a small owner had to make the bills and compete at the same time that owner would logically improve the product, expand the product, get more for the expense and sell at a higher rate to retain programming integrity. Compare that with today's corporate ethic: consolidate the product, reduce the product, cut every potential cost to reduce the expense, sell more at lower rates. Tell me where the integrity of the product went?

Source record: 14250

Friends,

About two weeks ago, on our way out to Cincinnati, I took a small detour

and visited the WKNR transmitter site south of Cleveland, OH at the invitation of CE John Hovanec, who was our host. I just put up a photo webpage about this visit. The main feature of this page is the over 50

year old, RCA model 50F, 50,000 watt transmitter. The Art Deco physical

design was by John Vassos. The transmitter is fully operational and I have done a special section on the 5671 air cooled power tubes showing a

time exposure of the glowing 3000 watt filament/heater. This was the first station to use a transmitter with these tubes in the RF final amplifier and modulator. Also, of interest, are some audio clips of some of the transmitter sounds.

This tour was on Sunday of the memorial day weekend.

The URL is http://www.jphawkins.com/wknr.html

Enjoy,

> even count
> it. They weigh it and ship it to the bank. Every station
> they buy is just
> another 24 hour Disney informmercial. They couldn't care less about
> programming, signal coverage, power output, etc.

If Disney's making money hand-over-fist, how come the last time they issued a financial statement, they were over $100 million in the red, due to theme park problems (which is only being exacberated by the lack of success of the new theme park next to Disneyland in Anaheim) and ABC's possible overreliance on "Who Wants to Be a Millionaire"?

Yes, Radio Disney's a loss leader for the rest of the Disney empire and they've discouraged their affiliates from doing tie-in promotions with DreamWorks' "Shrek," but if you actually bothered to listen to the network, you would know that it is nowhere near a 24-hour "infomercial" for Mickey and friends and that the Rugrats, the PowerPuff Girls, the Animaniacs and other kid pleasures--especially those boy and girl bands who owe more and more of their success to Radio Disney as CHR's pulling away from them--get equal time.

And as I've said before, even though I have problems with Radio Disney's format and presentation, at least somebody's trying to get kids to listen to the radio--and bring audiences back to AM radio.

The current labor negotiations are only dealing with motion pictures and television. The triple pay for spots simulcast for the web clause was added in the new 2000 AFTRA/SAG contract for commercials that ended the long strike by the performers' unions.

This happened before, but last night, the effects were so strong at times that it obliterated some of the weaker local stations such as 92.1 in San Diego

I was listening to Marco Collins show in the 7pm hour near Tweeter in Claremont Mesa, when some weird signal skip from Mexico took over the 92.1 frequency and I was listening to some Spanish tejano music. This is not a joke.

I scanned the FM dial on the open frequencies such as 96.1 and 93.7 and got several stations from about 500-800 miles away dogfighting it out for dial position on my car radio!

These signal skips are fun, except when you're trying to listen to 92.1 and some station interferes with it!

WCBN WILL DESTROY YOUR FEEBLE FORMATS

WCBN - Over 25 Years of Freeing Your Mind - Listen to us online!

WCBN is the University of Michigan student-run community freeform radio station in Ann Arbor, Michigan. We broadcast at 200 watts to the University and its surrounding communities from the basement of the Student Activities Building in downtown treetown. We have been broadcasting a genre-less overview of music, news, and public affairs for over 25 years.

WCBN's musical format is freeform, with some specialty shows. Freeform involves all different kinds of music, including jazz, reggae, blues, hip-hop, country, rock, and just about everything else under the sun. Instead of telling our DJs what to play, we allow them to select their own recordings from our vast and unique library. It is their responsibility to mix together many different kinds of music in an intelligent fashion, and show links between musical genres.

Click here to listen to our live WCBN-FM Ann Arbor broadcast!

Fantastic New Software for all branches of Broadcasting! Automate the process of generating EAS (Emergency Alert System) logs and reports. This Windows-based application easily interfaces with most EAS Radio Receivers, including the popular Sage ENDEC.

Reporting EAS logs to the FCC has never been easier. Monitor and log EAS signal activity for up to eight stations simultaneously!

Take a sneak peek at:
http://users.aol.com/tdmsoftware/home.htm

under the "software" menu option

Message-ID: <tii2ubd68miead@corp.supernews.com>
Source record: 14260

Hi,

I wouldn't worry at this point about modifying a radio for AM stereo. The only ones I might suspect are still doing AM stereo are the jazz stations at 1260 and 540.

AM stations in the expanded band msut be in stereo but the only station up there in LA is a Korean language station at 1650.

I would wait for about a year and then modify the radio for digital AM (which may be even testing in LA now). The digital standard has been recommended for shortwave so there may be stations popping up there soon.

John Unrath

I volunteer for a local community radio station. We've got a 340 foot AGL tower with a beacon and two sidelights, and the controller is about to die. It's from the late 70's and has been limping for years.

What are some big names in tower lighting controllers?

I came across the name Hughey and Philips, which I understand is now absorbed by Honeywell. I talked to Honeywell today and they recommended one of their basic controllers. Any other manufacturers I should consider?

Considering the FM stereo system results in over a 20dB degradation in signal/noise ratio compared to mono, there is nothing a station can do for any cost that will give such a great increase in listenable coverage.

Other Dallas area rimshot stations which have turned off the stereo....

>>
... This was the first station to use a transmitter with these tubes in the RF final amplifier and modulator ...
>>

Installed at about the same time, and apparently then owned by the same group, which included: WJR, Detroit, WGAR, Cleveland, and KMPC, Los Angeles.

This, from a circa 1949 "RCA Broadcast News" issue, which featured the BTA-50F, and which detailed the WGAR and KMPC installations, copies of which I have provided to the WKNR's CE, to his and his staff's condiderable amusement (the legendary Carl Smith designed the original DA-1 pattern).

WKNR, AKA "Keener", was part of a two station group in Michigan, owned by Knorr Foods, and consisted of WKNR, a regional station, and WKFR, a local station, both of which identified themselves with the "Keener" handle.

[Moderator's Note: WGAR-AM Cleveland was at 1220 for many years, owned by Nationwide Communications and simulcasting WGAR-FM 99.5's country format. WGAR changed calls to WKNR when it was sold. The FM remains WGAR and is now owned by Clear Channel.]

Hi Peter.

Was WKNR/WGAR originally "DA-1", or was it originally "DA-N", and later switched to "DA-1"?

Regards,

John Byrns

Well, it's almost here... the biggest set of changes since The Great Format-Juggling of 1999.

Here's the deal, for those of you not familiar with the situation.

WCLV-FM 95.5 is unique in that it's not only the sole commercial station still locally-owned** but it's one of only a handful of successful commercial classical music stations.

So, what we have is an interesting three-way swap between Clear Channel Communications, Salem Broadcasting and Radio Seaway... This has been positioned as an effort to keep classical music in Cleveland, as WCLV, NPR affiliate WCPN and PBS affiliate WVIZ-TV are supposed to eventually be owned by one (non-profit) entity.

Involved in this swap are:

WCLV-FM (95.5, Cleveland)
WHK-AM (1420, Cleveland) and -FM (98.1, Canton)
WAKS-FM (104.9, Lorain)

Not changing hands, but moving to a new frequency, is Clear Channel's WKDD-FM (96.5, Akron). And, the format on Salem's WRMR-AM (850, Cleveland) is moving also.

Here's the deal.

Radio Seaway gets 104.9 and 1420. In a last-minute deal, Seaway's Robert Conrad agreed to put the Adult Standards format currently on WRMR, on 1420, which will become WCLV-AM. Previously 1420 was set to simulcast 104.9.

95.5 goes to Salem, which will probably broadcast religious programming both there and on 1220. (WKNR's sports programming looks like it is moving to WRMR's current frequency, 850.)

I sincerely hope they will keep the WHK callsign, as it is historically significant.

Clear Channel's KISS CHR format, currently on WAKS 104.9, moves to 96.5, and WKDD's top-rated programming moves to 98.1. WKDD's Matt Patrick spoke about the change at a big 20th Anniversary bash the station held last Friday, noting that 96.5 doesn't have good penetration into parts of neighboring Stark County. Canton-based 98.1 sits in the middle of Stark County, and doesn't have that problem.

96.5's signal is incredibly strong all over Northeast Ohio, and by moving to 98.1, WKDD may lose some of its Cleveland listeners - 98.1 is certainly

listenable on the Lakefront, but doesn't come in static-free until you get out towards southern Cuyahoga County. That's ok, because WKDD doesn't market itself as a Cleveland station anyhow, and really never has.

Of course, what's interesting is that the Clear Channel stations are quoting July 1st as the date of the change, and WCLV is saying the 3rd...

On the surface, this seems like a win-win for everyone. Salem trades their FM frequency in Canton, a much smaller market, for one in Cleveland. Clear Channel moves WKDD to a frequency where it can better serve its target market, AND finally moves WAKS to a station that has a good signal. Radio Seaway gets the opportunity to keep classical radio alive for many years to come. The only thing I would be concerned about is 104.9's weaker signal, but even at 95.5, WCLV operated two repeaters for years anyhow. I'm not sure if they still do...

Other news:

Y'all know about the format change at 92.3, I'm sure. :) WXTM (92.3, Cleveland Heights) is now running a format that (as I've argued before) sounds a lot like what WMMS is doing, although Extreme Radio plays a couple things MMS doesn't.

Other news, courtesy of RadioReady.com: Greg Valentine is the new afternoon guy at Infinity's WQAL (104.1, Cleveland), replacing Dan Deely. Bill Randle, PD at WRMR (850, Cleveland) is gone, and Daune Robinson - whose name RadioReady.com misspelled "Duane"... oops - leaves WMJI for The Fish.

Ok, even I couldn't figure out what the hell The Fish is supposed to be. I thought it might be WCRF (103.3, Cleveland), which is Cleveland's incumbent religious station... but hey, check out www.955thefish.com - The Fish is apparently a new format that Salem is rolling out in various markets. I'll have to talk with my friends who work for Salem about this. Might be interesting.

I also caught a rumor that Lynn Tolliver, longtime WZAK/93.1 jock who had been doing the midday shift at 92.3 the Beat before it changed format, was moving to WTAM (1100, Cleveland), Clear Channel's news/talk outlet. We'll see...

**WCLV is the only commercial Cleveland station that is still locally-owned. The region has some other stations that are owned by locals, like WONE/WQMX/WAKR, owned by Rubber City Broadcasting, and WNWV/WEOL, owned by Elyria-Lorain Broadcasting. But the first three are Akron stations, and the other two are licensed to Elyria, and I've been yelled at for citing them as "Cleveland" stations, so I won't do so again.

Check EG&G (though I think they may have been absorbed also by another company?? Heck its hard to keep up with that nowadays)....
Go to www.broadcast.net and look for links to vendors and equipment dealers...you can find other lightning manufacturers there..

Also use Google.com and try search for "tower light*" and see what you get..

(By the way, this is a private mail, not for rec.radio.broadcasting
posting ;)

On Fri, 15 Jun 2001 22:44:39 -0000, in cle.general you wrote:

>95.5 goes to Salem, which will probably broadcast religious programming =
both
>there and on 1220. (WKNR's sports programming looks like it is moving to
>WRMR's current frequency, 850.)

95.5 will be "The Fish", Salem's Christian Contemporary format - as
you discovered later in the message. 1220 will take the current
format that is on 1420/98.1. I don't know about the WHK calls, but I
suspect they will end up there if at all possible. WKNR has already
announced the move to 850 (check it out on their Web site:
www.cleveland.com/wknr).

>Of course, what's interesting is that the Clear Channel stations are =
quoting
>July 1st as the date of the change, and WCLV is saying the 3rd...

I think everything "lands" on the 3rd, but I believe 'KDD will
simulcast at very least on the 2nd on both 98.1 and 96.5, and Kiss
says on their Web site that on the 2nd, they will "Kiss 104.9 goodbye"
(which leads me to believe on the 3rd, they'll be on 96.5 and 'KDD
will be on 98.1).

>On the surface, this seems like a win-win for everyone. Salem trades =
their
>FM frequency in Canton, a much smaller market, for one in Cleveland. =
Clear
>Channel moves WKDD to a frequency where it can better serve its target
>market, AND finally moves WAKS to a station that has a good signal. =
Radio
>Seaway gets the opportunity to keep classical radio alive for many years=
to
>come. The only thing I would be concerned about is 104.9's weaker =
signal,
>but even at 95.5, WCLV operated two repeaters for years anyhow. I'm not =
sure
>if they still do...

BTW - 98.1 and 96.5 are both doing tower location moves...check them
out on the FCC's Web site under the "FM Query" section (I believe
http://www.fcc.gov/mmb/asd/fmq.html is the location).

Basically, 96.5 is moving to around the Cuyahoga/Summit County line in Brecksville, and 98.1 is moving to near Hartville from just outside Louisville. There are some power/tower height changes as a result.

Mike

STAGE LEFT is a weekly mix of music, comedy and spoken word produced at KDHX-FM in St. Louis. Listen to it any time with RealPlayer at http://www.stageleft.org or http://www.kdhx.org/listen.htm

The latest edition of the STAGE LEFT webcast went on line today (June 13). This week the subject is "My Heart Belongs to Daddy". It's our Father's Day show with songs about fathers and sons from "The Fantasticks", "The Civil War", Mamma Mia!", "Carousel", "Aida" and many others, along with some silly stuff by Spike Jones and Stan Freberg. You can also get both the current episode of STAGE LEFT and previous weeks' shows at http://www.stageleft.org or http://www.kdhx.org/listen.htm. The play list is at http://www.stageleft.org/010613.html We'll be archiving a month's worth of shows.

Next Week (6/20): "New and Improved" - A program of new releases, including Kristin Chenoweth's new CD "Let Yourself Go", songs from the cabaret show "Doris and Me" by Australian cabaret artist Janet Seidel, and the sound track from the new film "Bride of the Wind".

Yes a number of them do. Locally in Milwaukee, we have 920 WOKY (Nostalgia) and 1290 WMSC (R&B) that broadcast WONDERFUL stereo. Sounds quite nice!

Also, WLS 890 Chicago is in stereo, and I beleive that WGN 720 is as well.

Source record: 14283

Here's a little trivia. Back around 1959 or 60, 660AM in Omaha had the KMEO call letters. It was a beautiful music station and they called it "Cameo." It was the former Storz KOWH, one of the first top-40 stations in the country.

Infinity Broadcasting is really pushing its talkers.

Howard Stern, recently added in Seattle, will be starting in Sacramento on Monday 6/18 on KXOA The Arrow as the station flips to Talk. KXOA will also add Opie & Anthony from New York's WNEW-FM as the begin their syndicated venture. This will be Opie & Anthony's third market as they were added to Philly's 94WYSP on Thursday 6/7. It is also reported that KXOA will add afternoon superduo, Don & Mike who syndicate out of WJFK 106.7 in Washington DC.

New York's WNEW-FM is also adding Brother Wease to its weekend lineup. Brother Wease is from Infinity's Rochester, NY property, 96.5 WCMF-FM.

Here's some additional trivia.

WOW-AM WOW-FM & WOW-TV
590 92.3 Ch 6
all use to have studios in the same
building.

Also, KMEO in 1988 was a station
in Phoenix at 96.9. They also
called themselves "cameo" and played
"elevator" music.

From: Meyer Gottesman <wrecktech@yahoo.com>
Message-ID: <tiq0ve3e86mfd3@corp.supernews.com>
Source record: 14293

I am still looking for active or inactive broadcaster investors to help me acquire a Class IV AM in a small town in Mississippi. I can get it for about $125,000 with $15,000 down. Seller financing. No real estate included. On the air since 1946.

I am a semi-retired radio engineer. Ham since 1950. FCC First ticket in 1951. Age 66. Former CE Houston, Boston, NYC, Mobile, Miami and more. Past President and founder of FM in San Francisco.

Tel: (478) 741-1710. Macon, GA. Best times are early mornings, Tues. to Sat. (Internet addict!)

email: wrecktech@yahoo.com

Please have at least $10,000 to invest if inactive and at least $5,000 if you can and will provide a useful active function. All investors will be on the board of directors with full voting rights if desired.

Yes, KOWH, 660 in Omaha was the first station Todd Storz owned. It was a 500 watt daytimer that developed super ratings in the 50's. Although, at first it wasn't quite Top 40, it had some of the music and news formatics that developed into the format. I believe his New Orleans operation, WTIX was the first station to label the format Top 40, then WHB, KOWH, WDGY and so on. KOWH gave it up early because it couldn't compete with the full time Top 40 stations, once they copied Storz format and built up some momentum.

The Fish is on in Los Angeles and recently started up in Chicago at what used to be WYLL and is now WFTF, I believe (Salem moved the calls and talk/religion format to 1160 AM, WSCR's former home and the frequency for years of the historic WJJD calls). It's not a satellite or voice-tracked format (praise the Lord), but is live jocks in each city. The idea is to be an AC station that just happens to play Michael W. Smith instead of Rod Stewart and not be preachy or holier-than-thou (although their slogan is "Today's Christian Music"). They've even done a TV campaign on mainstream TV in Chicago (including during a station break on "Who Wants to Be a Millionaire" on ABC O&O WLS--you can't get much more mainstream than that).

With the exception of non-com WMBI-FM, Chicago's not been supportive of CCM formats until now--most of them have been suburbans or rimshots and a couple are college stations. I hope Salem finds success with The Fish.

I live at apartments on Skillman a block from Northwest Highway. I find that the station is not audible on my recievers and I have some good recievers for SWL/MWDXing. I can hear it if I walk a block up the street with one of my recievers. At night the station from College Station dominates the frequency. I was listening to the TIS from DFW on 1680, but the last couple of nights I was getting a station playing Soul Music and Blues but I never got the stations location.

Meyer, where are you going with this project? I would love to be controlling owner/major investor in an AM that still believes in "local" programming. Full service during the day and HS football, hoops, swap shops, full length cmml's from Ike's Hardware Store on Sat. mornings, Rev. Harland's Gospel Hour of Revival on Sunday Mornings with a repeat broadcast Wednesdays at midnight. Cash up front. All promotion hinged around the morning show. Get spots on for "A dollar a holler." Then we'll unload the thing on Clear Channel for triple the investment 'cuz they own the FM down the street and can't stand to see any advertising revenue going elsewhere.

Not surprising when corporate bottom-liners take over. No concern for listeners, or tradition or what's, in fact, good radio. Same thing happened a few years ago when the longest running classical station in Phily, WFLN, was sold to idiots who turned it into a "all your favorites all the time" format. So much for culture.

Paul

2344. Clear Channel stations?

After 59 years, WHKY-AM 1290 radio in Hickory felt it was time to dial up a change. So the news and talk radio station is boosting its signal and moving from 5,000 daytime watts to 25,000 watts. The move will make WHKY the state's fourth-strongest AM station during the day out of 223 stations. WHKY will spend about $600,000 in the next 18 to 24 months. The station can be heard by 424,000 people. With the power surge, the signal will reach 625,000 people. Ed Best

Yes. Storz had WHB in KC, KXOK in St. Louis, WQAM in Miami, New Orleans on 690 and KOMA Oklahoma City, too.

I beg your pardon? Infinity paid $58 Million Dollars for US99 in
Chicago, and they were so tight, we reused the toner in the copy
machine.

A few hundred thousand at ANY radio station is far from
irrelevant.

2352. KEGL fires jocks over Britney Spears death hoax

Newsgroup: rec.radio.broadcasting
Date: 2001-06-20 21:51:15 UTC
From: familiacantu@cs.com
Message-ID: <tj26mj8t5hl7a7@corp.supernews.com>
Source record: 14113

DALLAS (Reuters) - A Dallas radio station has fired two disc jockeys who sparked a panic among Britney Spears fans with a phony report that the teen pop star was killed in a car crash with boyfriend Justin Timberlake, the radio station said on Tuesday.

Police and fire officials in Los Angeles were deluged with phone calls after two San Jose-based deejays, known as Kramer and Twitch, claimed a source told them Spears was dead and Timberlake, a member of the teen heartthrob band 'N Sync, was in a coma after a crash in Los Angles.

They aired their fake report during a nighttime show on Dallas hard-rock station KEGL-FM last Tuesday. KEGL is owned by San Antonio, Texas-based Clear Channel Communications.

Spears' publicist quashed the rumor the next day with a statement that the 19-year-old and Timberlake, 20, were in "great health."

"They were let go on Monday," Gabrina Soliz, a spokeswoman for Clear Channel Communications, said about Kramer and Twitch.

Soliz said the Britney scare was not the only reason for the firing, but declined to elaborate. Executives at the radio station were not immediately available to comment.

Clear Channel vice president and Dallas market manager Tom Schurr told the Dallas Morning News newspaper that the decision was based on several controversies sparked by the deejays during a recent five-month stint at Clear Channel-owned KSJO in San Jose, California.

The newspaper said while at KSJO, Kramer and Twitch once suggested that motorists run over bicyclists or hit them with their car doors.

"There were some other things that I only have a cursory knowledge of that came up while they were out there (at KSJO)," Schurr told the Morning News.

Kramer and Twitch, whose real names are Keith Kramer and Tony Longo, could not immediately be contacted. The Morning News said their show had aired on KEGL since 1998 and was broadcast by both KEGL and KSJO from last December to May, then played only on KEGL.

Kramer told the Morning News that he and his partner were surprised by the decision.

"We got permission to air the bit," he said, referring to last week's hoax.

Kramer said when he and his partner decided to use Spears as the subject of the hoax they doubted that any of her fans would listen to a rock station like KEGL.

The Louisiana-born Spears is one of the top-selling pop artists in the world.
Her album "Oops! I Did It Again" was one of the best-selling releases of 2000.

The one and the same, along with WHB in Kansas City, WTIX in New Orleans and several other pioneering Top 40 stations.
>>

Storz' main station was Oklahoma City's KOMA/1520.

St. Louis' KXOK/630 was pretty significant, too.

WDGY was in all probability pretty insignificant before the war as it was then on 1180 and was sharing time with KOB and KEX, among several other time-shares.

WDGY's move to 1130 came along with the consolidation of two New York City stations into WNEW, and that station's move to 1130 and elevation to Class I-B status (WDGY got Class II-B status as a booby prize).

As far as I can tell, the transmitter I'm listening to is located on Interstate 35E, about 1/4 miles north of Northwest Highway. If you are receiving the same signal as I am, that is very amazing, since you are a good 8-10 miles away. I suspect there are other talking billboards around town, possibly one on Central Expressway, which would be somewhat near you, but still a couple of miles away.

Today, I noticed the programming had changed to a repeating loop advertising the Cadillac Escalade SUV. It was about a minute long, then repeated itself. I had no problem with the low fidelity signal for three or four miles.

If this is a legal part 15 station, I'd like to know how the antenna is constructed. It is very effective. If GM can do it, you or I should be able to do so as well, and be within the confines of the law. All the part 15 stuff I've ever worked with only went a few hundred feeet (sometimes a lot less).

If you and I have to play by the rules, so should everyone else.

Chuck

Without sounding like an apologist for the mega-station owners, I should point out that suck.com went out of business a few weeks ago and is now as relevant as "Jammin' Oldies."

Considering that they always predictably negative and never positive about anything, good riddance.

It is interesting to note how few 50 kw AMs there are in North Carolina. In the newest M Street book, I could find only 4.... WFGW, WBT, WXII and WPTF. The 50 kw licensed to 850 in Raleigh has now been reduced to 10 kw. Given the fairly poor ground conductivity in much of the state, perhaps there is no return on the investment. I'm surprised to see a high-band station making the move, but, of course, the limited coverage of 5 kw on 1290 may have forced them to upgrade.

2364. New STAGE LEFT episode on line: "New and Improved"

Newsgroup: rec.radio.broadcasting
Date: 2001-06-23 00:47:55 UTC
From: thedoge@pobox.com
Message-ID: <tj7ppr498lnj66@corp.supernews.com>

STAGE LEFT is a weekly mix of music, comedy and spoken word produced at KDHX-FM in St. Louis. Listen to it any time with RealPlayer at http://www.stageleft.org or http://www.kdhx.org/listen.htm I'm very interested in feedback from our listeners, so please drop me an e-line at chuck@stageleft.org

The latest edition of the STAGE LEFT webcast went on line yesterday (June 20). This it's another in our series of programs featuring new releases. The featured albums this time are Kristin Chenoweth's "Let Yourself Go"; Hans Zimmer's live concert album "The Wings of a Film"; Australian cabaret artist Janet Seidel's "Doris and Me" (which is basically the original cast recording of here cabaret show of the same name featuring songs made popular by Doris Day) and Joshua Bell's new CD of music by Leonard Bernstein, including John Corigliano's wonderful orchestration of "Make Our Garden Grow" from "Candide".

You can get both the current episode of STAGE LEFT and previous weeks' shows at http://www.stageleft.org or http://www.kdhx.org/listen.htm. The play list is at http://www.stageleft.org/010620.html Shows remain available for a month after they're put up.

Next Week (6/27): "Black Light" - It's not a rerun, not an encore presentation, it's a revival broadcast of our first on-line episode, featuring music by African-American composers from the early years of the 20th century.

In 1966 KVIL 103.7 use to be a top-40 station. I liked to listen to them a lot there were several personalities that I liked: Frank (Little David) Jolle, Dave Jancey, Dave Mills, David Jones. Though the one I liked the most and wonder what ever became of him is Ron David McCoy, I liked his style a lot.
I liked KVIL a lot as a top-40 station, my next favorite was KFJZ 1270, and of course KLIF 1190. Also KXOL 1360 when I could hear them but at night KXOL did not reach my part of Dallas as well as the others did.

It is interesting to note how few 50 kw AMs there are in North Carolina. In the newest M Street book, I could find only 4.... WFGW, WBT, WXII and WPTF. The 50 kw licensed to 850 in Raleigh has now been reduced to 10 kw. Given the fairly poor ground conductivity in much of the state, perhaps there is no return on the investment. I'm surprised to see a high-band station making the move, but, of course, the limited coverage of 5 kw on 1290 may have forced them to upgrade.

Just listen to one of the stations you know they own and check who's at the same address. You can even call the receptionist.

If you listen long enough, a promo may even tell you.

Here in Florida, a number of them are running promos emphasizing the other stations in the immediate cluster.

If you can find it, an interesting source of information on Storz is a Ph.D., dissertation by David Thomas McFarland, "The Development of the Top 40 Radio Format", University of Wisconsin, 1973. Information specifically about WHB is on pp. 175-79. I recall that the other Storz stations (including KXOK) were mentioned as well. The University of Missouri library has this dissertation (not sure why this particular one, but you don't question lucky breaks when doing research) and it may be available on microfilm as well.

Sorry I don't know what happened (the Kodis database at http://www.radiostation.com/ doesn't list it on AM or FM).

Reminds me of something I posted here years ago and kept a copy of, maybe since Bill Pfeiffer, a terrific guy who founded this newsgroup, wrote to say he enjoyed it. Several others contributed corrections. My post was titled "Los Angeles Radio 1960-66":

From the time I started enjoying radio until moving away. Listening post was Pasadena.

KLAC/570: pop standards. I don't think "adult contemporary" had been coined yet.

KFI/640: very homey, directed towards an older audience, seemed to have no interest in ratings at all. Lotsa Lawrence Welk etc, but a great old radio/big band history show on Sat night, full of air checks from the 30s, also had an hour live from the Coconut Grove nightclub at the Ambassador Hotel, a cool place at the time. KFI also had Dodgers baseball, NBC news and some other net feeds.

X[E]TRA/690: rock with a poor signal, _but_ Wolfman Jack was there, so you tried to get it when next to a good radio.

KMPC/710: Angels baseball, pop standards, a real personality to the station.

KBIG/740 (Avalon) beautiful music daytime. Nice signal.

KABC/790: ABC news, some sports, some talk (incl. acerbic, with never-ending advice to callers to "Go gargle with razor blades.").

KIEV/870 (Glendale): pop music, some religious.

KGRB/900: astonishingly friendly little station, 250w from West Covina. Pop standards really well done.

KHJ/930: Mutual network (a real entity at the time) news and features, pop music. General tiredness to its personality. Signal somehow not very good for 5kw.

KFWB/980: top 40, and very good at it. Casey Casem (sp?)'s first big-market job, or close to it. B. Mitchell Reed was the absolute coolest DJ on the face of the earth. Every high-schooler's favorite station.

KGBS/1020: pop music with a light Latin flavor. Well done. 50 kw daytimer.

KNX/1070: then as now, a solid station. More quirks and variety all over the dial; here, for example, Dear Abby had a daily half-hour on CBS at the time.

KRLA/1110: also-ran to KFWB. 'WB had a cool, laid-back personality, while KRLA was bubbly. Better signal, though. It was widely rumored that if you heard a song you liked on 'WB, tune in KRLA and you'd hear it a few minutes later. Or if 'WB was playing something you didn't like, you punched this one and stayed until the current song ended.

KRKD/1150: eccentric, eclectic mix. Some religious. Sounded like it was owned by one person who was also program director and who didn't need the money. Sort of like KFI.

KGFJ/1230: I remember it was there, but no memory of its programming.

KPPC/1240: from the basement of the Pasadena Presbyterian Church (thus the call), a few hundred watts, on the air three days a week - and around 1966-68 (I listened on visits home) became one of the country's first underground stations figuratively as well as literally. Alternative, community, committed, wonderful. Didn't last.

KWKW/1300: Spanish. Strong signal interfered with KFAC.

KFAC/1330: classical simulcast with FM (as KHJ, KNX, KRKD). Well done if very traditional format. So Cal Gas Company sponsored a commercial-free studio program every weeknight, and had for 30 years or so. You had to respect it.

KTYM/1460: eclectic, ethnic mix. A cultural treasure, but poor signal.

KPOL/1540: Soporifically beautiful music simulcast with FM.

KDAY/1580: 50kw daytimer: rock with as African American a flavor as you could get in those days.

Corrections posted included: Wolfman was primarily on a border blaster south of Texas (XERF?), correct frequency for KGFJ or KTYM. Casey Kasem had been in major markets before.

2377. FS: Sony CDK-3600 CD Jukebox, unused

Hello:

I still need investors to help me buy a fulltime AM
station, 1 KW,non-directional in a small city in
Mississippi. On the air since the 40s.

I am a semi-retired radio engineer since 1951. age 66.
Ham since 1950.

I have offered $125,000 with $25,000 down and seller
financing. I don;t believe any real estate is
included. For a little bit more, an FM CP is for sale
for same community, Class "A" $200,000 more. Unbuilt.

This is an exceptional situation. This station is a
sleeper. Needs some TLC but has tremendous potential.
Elvis was on the station as a live singer when he was
still a nobody!

email me at: wrecktech@yahoo.com or call early
mornings (Eastrn time) to my Macon, GA res.
(478) 741-1710. My attorney is in Washington, DC and I
will identify him.

>>

Once owned by the Pasadena Presbyterian Church (hence -PPC), this station operated Wednesdays and Sundays, on a specified-hours basis.

Whenever KPPC/1240 was operating, KGFJ/1230 was required to operate with reduced power, some say 100 watts others say 250 watts, and KGIL/1260 was required to operate with a directional antenna (KGIL's night DA satisfied both KPPC's Wednesday night and Sunday day protection requirements).

KPPC is deleted, and KGFJ, under new owners and with a new call, KYPA, is now 1 kW 24/7.

|
| The one and the same, along with WHB in Kansas City, WTIX in New Orleans and
| several other pioneering Top 40 stations.
| >>
|
| Storz' main station was Oklahoma City's KOMA/1520.

Is there a source for this statement? My own observations, based on my own research and having grown up in the coverage areas of WHB and KXOK (plus KIOA, a non-Storz regional rocker and marginally in the KOMA fringes), is that the stations were fairly equivalent in status. WHB was where the Top 40 format was fine-tuned once KOWH was sold; WTIX also had a substantial amount of significance in the earlier days of Storz.
|
| St. Louis' KXOK/630 was pretty significant, too.
|
Storz didn't own it until 1960. It also fell victim to FM relatively early, when KSLQ came on in 1972 (I was in high school at the time and there was a big buzz about KSLQ when it hit the scene). WHB held on much, much longer, and was running an oldies format with a small degree of success until 1993. (Kansas City generally has been kinder to AM stations than many other markets have been.)

KXOK's other problem was that St. Louis' population growth was westward. Look at KXOK's (now KJSL's) nighttime pattern.

| WDGY was in all probability pretty insignificant before the war

WHB was so-so. It was a daytimer but had some nighttime privileges on occasion. It had to share its Mutual affiliation for a time with W9XBY/KXBY/KITE (which ran Mutual at night). KXOK grabbed its frequency from the radio station in my hometown.
Some of fruits of my own research are at:

<http://www.cosmos-monitor.com/hist/kc/whb.html> and
<http://www.cosmos-monitor.com/hist/stl/kxok.html> *and*
<http://www.cosmos-monitor.com/hist/kfru.html>.

I'm curious. I realize you feel negative about Clear Channel. I can understand the term Cheap Channel, as does Randy Michaels, to describe tight financial controls. I have to admit I'm at a complete loss to figure out what Queer Channel refers to. From most reports I've seen the complaints that have gone to court involve very heterosexual, though childish, behavior. You know, boys will be boys kinds of things.

Is it just that you've worn out all the other possibilities and desperately need another pejorative, whether it's relevant or not?

Back then it was an AM/FM combo, with the AM on specified hours. (Wednesday night and Sunday from the days of church services). When the AM was on the air, KGFJ had to power down. The AM was decommissioned and the FM moved to an office-type building and was owned by the National Science Network.

Today, the FM lives on as KROQ and is high in the ratings. This station has consistently been at the forefront of "new" music. In the early 70s, it brought us underground. I heard groups like Jethro Tull and artists like Elton John and Leon Russell first on KROQ.

The Credibility Gap first appeared there, and they had live blues with Johnny and Shuggie Otis when the rest of LA FM was tending their automation.

This station has a great history, and you're lucky to have seen it in its earliest days as an "alternative" operation.

You'd think R&R would be able to keep up with things. In the Salt Lake City market, they STILL have KISN listed as being owned by Trumper. It was sold to Clear Channel a year ago or so.

The 850 in Raleigh was never licensed for 50 kW, as far as I know.
When I worked there, I remember seeing paperwork that indicated that
50K was applied for in the early 80's but never built. It would have
required eight towers and the pattern would have been pretty tight.
So they settled for 10 kW non-d daytime, 5 kW DA night, five towers.
The 10 kW site they built and put on air in 1984 was very nicely done.

I'm from OK and can tell you the OKC ones are: WKY (930AM), KTOK (1000AM), KEBC(1340AM), KQSR(94.7FM),KXXY(96.1FM), KTST(101.9FM), and KJYO(102.7FM)
Another five stations in OKC owned by Citadel Communications

Apparently, when they turned out the lights, somebody left the server
on. That's a great piece. Its well written and accurate.

You might want to be an apologist for the megas-station-owners. They
could use you about now.

I was wondering if there is currently a radio show that exists in overnights (or late nights) that has a personality driven progam with a lot of dance music and off-the-wall comedy sketches, etc. Sort of a variety show, and something like a more mainstream version of what the UK's Chris Morris has done, particularly with "BLue Jam"????

Thanks.

Best

It is interesting to note how few 50 kw AMs there are in North Carolina. In the newest M Street book, I could find only 4.... WFGW, WBT, WXII and WPTF. The 50 kw licensed to 850 in Raleigh has now been reduced to 10 kw. Given the fairly poor ground conductivity in much of the state, perhaps there is no return on the investment. I'm surprised to see a high-band station making the move, but, of course, the limited coverage of 5 kw on 1290 may have forced them to upgrade.

Apologies if this is a FAQ but I can't seem to find the answer anywhere. Anyone know how to find the location of a particular station's transmitter?

I ask because I was at a Dodgers-Padres game this weekend in LA, and I was listening to the San Diego broadcast on the way up at AM 600. I could hear the station fine up to the moment that I got out of my car. While walking toward the stadium, all I could hear on the 600 kHz band was a local LA station which normally broadcasts at 570 kHz. I would assume that since the signals are reasonably far apart, the most likely explanation for this is that the 570 kHz transmitter is probably nearby....

I could be wrong on this but 850 in Raleigh, formerly WKIX and now WRBZ, has
always been 10 KW

WCBN WILL DESTROY YOUR FEEBLE FORMATS

WCBN - Over 25 Years of Freeing Your Mind - Listen to us online!

WCBN is the University of Michigan student-run community freeform radio station in Ann Arbor, Michigan. We broadcast at 200 watts to the University and its surrounding communities from the basement of the Student Activities Building in downtown treetown. We have been broadcasting a genre-less overview of music, news, and public affairs for over 25 years.

WCBN's musical format is freeform, with some specialty shows. Freeform involves all different kinds of music, including jazz, reggae, blues, hip-hop, country, rock, and just about everything else under the sun. Instead of telling our DJs what to play, we allow them to select their own recordings from our vast and unique library. It is their responsibility to mix together many different kinds of music in an intelligent fashion, and show links between musical genres.

Click here to listen to our live WCBN-FM Ann Arbor broadcast!

The more I've thought about this, the more I'm convinced I was wrong in my original post. I don't think they are trying something new - I think they've got a problem with their transmitter. I noticed the signal was very weak the other morning. They have a CP to increase the height of their antenna and drop the power to 90kw. I wonder if it's perhaps an indication of their work on the transmitter??

What is the best Focusrite investment (see subject)?

Right now I'm using the beginners choice "Focusrite Voicemaster" combined with a R&#65533;de NT2. But with a new mic - U87ai or R&#65533;de NTV - it is obvious to buy a new preamp/processor.

Is the compressor in ISA 430 actually the same as in the Red 7 - or how?!

Kind regards...

Jan

Very interesting. I was at the different place (Long Beach), same time.
BTW, check my website www.lavocalgroups.com for theories about the
inspiration for KRTH's oldies programming.

Steve
>
> Reminds me of something I posted here years ago and kept a copy of,
> maybe since Bill Pfeiffer, a terrific guy who founded this newsgroup,
> wrote to say he enjoyed it. Several others contributed corrections. My
> post was titled "Los Angeles Radio 1960-66":

>
> X[E]TRA/690: rock with a poor signal, _but_ Wolfman Jack was there, so
> you tried to get it when next to a good radio.

came in ducky in L.B.

> KMPC/710: Angels baseball, pop standards, a real personality to the
> station.
>
> KBIG/740 (Avalon) beautiful music daytime. Nice signal.
>
> KABC/790: ABC news, some sports, some talk (incl. acerbic, with
> never-ending advice to callers to "Go gargle with razor blades.").

You're referring to Joe Pyne who was on KLAC, 570.

>
> KFWB/980: top 40, and very good at it. Casey Casem (sp?)'s first
> big-market job, or close to it. B. Mitchell Reed was the absolute
> coolest DJ on the face of the earth. Every high-schooler's favorite
> station.

The big one alright. It's spelled Kasem. Called it Color Radio, 1st
top 40 in L.A., debuted Jan 4, 1958 until 1968.

> KGBS/1020: pop music with a light Latin flavor. Well done. 50 kw
> daytimer.

Not what I recall. What I recall was Art LaBoe playing r&b in pm,
advertising El Monte Legion Stadium, "be there or be square." Did
popular remotes from Scrivner's Drive-In in Hollywood. KGBS went county
in early 1960s after LaBoe did a "name it & claim it" as a way of
disposing of record library.

> KNX/1070: then as now, a solid station. More quirks and variety all
> over the dial; here, for example, Dear Abby had a daily half-hour on

> CBS at the time.

Major, major morning man was none other than Bob Crane, absolutely hysterical. Went to Hogan's Heroes, replaced by Rege Cordic from KDKA, not as funny, but pretty funny.

> KRLA/1110: also-ran to KFWB. 'WB had a cool, laid-back personality,
> while KRLA was bubbly. Better signal, though. It was widely rumored
> that if you heard a song you liked on 'WB, tune in KRLA and you'd hear
> it a few minutes later. Or if 'WB was playing something you didn't
> like, you punched this one and stayed until the current song ended.

Was KXLA, country format, until Sept. 1959, went top 40 to compete against KFWB, played music until 1999 when Viacom ruined it by trying talk.

> KGFJ/1230: I remember it was there, but no memory of its programming.

Too bad you don't remember it, probably conflicted w/ KPPC signal. It was THE R&B station, had at various times as dee jays, Hunter Hancock, Magnificent Montague (during Watts Riots), Larry McCormick, Rudy Harvey, Herman Griffith, the list is endless. If you were an L.A. area teen - white, black or Mexican in the 60s and weren't listening to KGFJ, you were out of it. I think of it as the Station of the Watts Riots where Montague perfected "Burn Baby Burn," then replaced the phrase with "Have Mercy" when he discovered that kids were taking it way too seriously.

>
> KTYM/1460: eclectic, ethnic mix. A cultural treasure, but poor signal.

First station to program r&b oldies, 1962!!!. Godfrey was major dee jay.
>
> KPOL/1540: Soporifically beautiful music simulcast with FM.
>
> KDAY/1580: 50kw daytimer: rock with as African American a flavor as you
> could get in those days.

Disagree. KGFJ was the King. KDAY's top 40 lists go back to 1957, lots of R&B. Alan Freed was dee jay in c.1960 as was George Carlin at about the same time. Out of Santa Monica.

> records?

Don't know about those particular acts, but performers have come up with names to use when recording certain songs; this happened fairly often in the 1950s and 1960s. Ron Dante was apparently never interested in touring but enjoyed working as a studio singer -- he recorded as "The Detergents" for the parody "Leader Of The Laundromat", was lead voice of "The Archies", and undoubtedly sang under other names, perhaps including one or more of the ones you gave.

In the late '60s the groups Ohio Express and 1910 Fruitgum Company were essentially the same act -- they certainly had the same lead singer. No big deal, since both were manufactured "bubblegum" acts.

Darlene Love sang on many of Phil Spector's classic "girl groups" hits.

David Seville (Ross Bagdasarian) had a novelty hit with "The Witch Doctor" before he "became" The Chipmunks.

Sheb Wooley recorded both serious and novelty ("The Purple People Eater") songs under his own name before inventing country-music parodist Ben Colder.

Then there was Wonder Who, the act that had a minor hit with a *very* pop version of the folk classic "Don't Think Twice, It's Alright". Wonder Who were really Frankie Valli & The Four Seasons, but they already had a string of Top 40 hits and didn't want to become overexposed ... or force fans to choose between their other current-at-the-time hits and this bit of froth .... so they released it under a different name.

I won't bother to list any of the times a singer left a successful group for a solo career, or occasionally formed (or joined) a second group after the first one broke up.

Then there's the confusing case of Van Halen, David Lee Roth and Sammy Hagar .... <g>

So a dee jay would play their latest release. In this case, it was the work of Tony Burrows who recoreded as Crazy Elephant, First Class, the Pipkins, etc.. Jocks would play records by seemingly separate acts, might be hesitant to play more than one record by the same act released at about the same time.

Source record: 14075

I used to like listening to what is derisively called "elevator music," or possibly more favorably "easy listening." In the New York City area many moons ago, it was played on WVNJ, WRFM, WPAT, and probably others I've forgotten, as it used to be very common. Now that it has been killed off on broadcast radio, the thought of being able to hear stations like those again over Internet is appealing. Does anyone know of an Internet station similar to any of those old greats?

That would be my guess.

And as with all lazy marksmen, it takes very little practice to take aim for the bigger target.

However, it sounds as though he (Meyer) had it pretty good at one time. But all good things (and thankfully all bad things) eventually come to an end.

The pejorative is in the perception more than the factual nature of the claim.

Flying Machine (Smile a Little Smile For Me, Rose Marie), First Class (Beach Baby) Brotherhood of Man
(United We Stand, Divided We Fall), White Plains (My Baby Loves Lovin') and Edison Lighthouse (Love Grows Where My Rosemary Goes) and the Pipkins (Gimme Dat Ding) were all British studio groups and all featured the same lead singer, Tony Burrows. Production chores for most of these songs was handled by Brit Tony Macauley.

This is according to Wayne Jancik's excellent "One Hit Wonders" book, published in 1990.

Spiral Staircase was from Sacramento, California and featured Pat Upton as lead vocalist.

Crazy Elephant was the creation of the bubblegum team of Jerry Kasenetz and Jeff Katz, who also gave us
the Ohio Express among other groups that oldies stations won't touch with a 10 foot pole these days and for good reason!

STAGE LEFT is a weekly mix of music, comedy and spoken
word produced at KDHX-FM in St. Louis. Listen to it any time
with RealPlayer at http://www.stageleft.org or
http://www.kdhx.org/listen.htm

The latest edition of the STAGE LEFT webcast went on line
today (June 27). This week it's a "revival" of our very first on-line
episode, featuring music by African-American composers from
the early years of the 20th century, including Eubie Blake, "Fats"
Waller, Scott Joplin and James P. Johnson. You can get both
the current episode of STAGE LEFT and the last four shows at
http://www.stageleft.org or http://www.kdhx.org/listen.htm. This
week's play list is at http://www.stageleft.org/010627.html

Next Week (7/4): "1776 And All That" - A red, white and blue
special, including the original and revival cast recordings of
"1776", music from "Ben Franklin in Paris", and stuff by Stan
Freberg, Albert Brooks and the Firesign Theatre.

So a dee jay would play their latest release. In this case, it was the work of Tony Burrows who recoreded as Crazy Elephant, First Class, the Pipkins, etc.. Jocks would play records by seemingly separate acts, might be hesitant to play more than one record by the same act released at about the same time.

2433. New STAGE LEFT episode on line: "Black Light"

Newsgroup: rec.radio.broadcasting
Date: 2001-06-30 01:18:24 UTC
From: thedoge@pobox.com
Message-ID: <tjqa70te1uahd8@corp.supernews.com>
Source record: 14094
Cross-posted to: rec.arts.theatre.musicals,rec.radio.broadcasting,rec.radio.noncomm,stl.general

STAGE LEFT is a weekly mix of music, comedy and spoken
word produced at KDHX-FM in St. Louis. Listen to it any time
with RealPlayer at http://www.stageleft.org or
http://www.kdhx.org/listen.htm

The latest edition of the STAGE LEFT webcast went on line
today (June 27). This week it's a "revival" of our very first on-line
episode, featuring music by African-American composers from
the early years of the 20th century, including Eubie Blake, "Fats"
Waller, Scott Joplin and James P. Johnson. You can get both
the current episode of STAGE LEFT and the last four shows at
http://www.stageleft.org or http://www.kdhx.org/listen.htm. This
week's play list is at http://www.stageleft.org/010627.html

Next Week (7/4): "1776 And All That" - A red, white and blue
special, including the original and revival cast recordings of
"1776", music from "Ben Franklin in Paris", and stuff by Stan
Freberg, Albert Brooks and the Firesign Theatre.

I was wondering who would be playing Soul Music , R&B of the 60s and 70s, on 1680. The signal always seemed to fade out at times for an ID or other information that would help me identify them.
It was a;most so strong the past couple of nights that the DFW Airport which normally dominates was almost inaudible at my location in Dallas a block from Abrams and Skillman.

Flying Machine (Smile a Little Smile For Me, Rose Marie), First Class (Beach Baby) Brotherhood of Man
(United We Stand, Divided We Fall), White Plains (My Baby Loves Lovin') and Edison Lighthouse (Love Grows Where My Rosemary Goes) and the Pipkins (Gimme Dat Ding) were all British studio groups and all featured the same lead singer, Tony Burrows. Production chores for most of these songs was handled by Brit Tony Macauley.

This is according to Wayne Jancik's excellent "One Hit Wonders" book, published in 1990.

Spiral Staircase was from Sacramento, California and featured Pat Upton as lead vocalist.

Crazy Elephant was the creation of the bubblegum team of Jerry Kasenetz and Jeff Katz, who also gave us
the Ohio Express among other groups that oldies stations won't touch with a 10 foot pole these days and for good reason!

2441. Elevator music

Newsgroup: rec.radio.broadcasting
Date: 2001-06-30 01:18:38 UTC
From: andrew@2000computer.com
Message-ID: <tjqa7epqvnd8e8@corp.supernews.com>
Source record: 14002

I used to like listening to what is derisively called "elevator music," or possibly more favorably "easy listening." In the New York City area many moons ago, it was played on WVNJ, WRFM, WPAT, and probably others I've forgotten, as it used to be very common. Now that it has been killed off on broadcast radio, the thought of being able to hear stations like those again over Internet is appealing. Does anyone know of an Internet station similar to any of those old greats?

2442. KDAN-AM Newport Minnesota?

Newsgroup: rec.radio.broadcasting
Date: 2001-06-30 01:18:40 UTC
From: rsmtmn@aol.com
Message-ID: <tjqa7ge6vtnge9@corp.supernews.com>
Source record: 14003

I'm looking for any information on a AM Broadcast Station with a Callsign of KDAN, frequency unknown. It was located at 1645 Military Road in Newport Minnesota between the years of 1975-1980. I could nolonger find any entry of the callsign in the phone books after 1979. This was a daytime broadcaster and the Station Manager was David Perkins. I toured the station once around 1977 and it was down a dirt road with tree's on either side, then it opened up into a pasture with a house on a little hill, with the antenna tower/s down from the house in the back. It wasn't a commercial building, and looked almost like a family home. No one in the area seems to remember the station, or if they do, are getting it confused with the old KDWB site futher to the on Radio Dr. in Woodbury Minnesota.
Any information would be greatly appreciated.
Thanks.

I would be very surprised.. no wait... shocked, if anyone could put up a net station of this format.

The reason is the format was designed just for radio. Most of the songs that made up the format were never commercially released. In fact I think the music for this format was only available to stations through one or two music suppliers.

Chances are most of the stations that had this format, have erased or thrown out the reels of music.

Thanks, for the information.
I miss the days when there were 3 to 4 stations with top-40, though now called CHR, though it is getting harder to tell the CHR from the Urban Contemporary stations.
Ron David McCoy introduced on KVIL a show, The Psychedelic Hour, before any other stations were in the market doing progressive rock.
Later a station from Cleburne, KCLE - FM, later became KFAD and had Progressive Rock though for a longtime had a big time block set aside for Jazz. Later KNUS came on the air with Progressive Rock, KNUS had a stronger signal and won out though I thought KFAD was actually the better station. Though I find if I like a radio station it seems to loose out to others unless making changes in their format.

From: Bill Shoemaker <shoemakerb@sunlink.net>
Message-ID: <tjqa7tcqrm4ff4@corp.supernews.com>
Source record: 14009

I'm an ex-DJ, back in college, and helping the campus station get set up for a new HD automation system (Digilink IV) while the station and the rest of the staff is off for the summer.

Does anyone know of a simple freeware or low cost shareware (one that I can buy myself and donate) music scheduling program that I can use to help pick the music while scheduling??

It doesn't have to be fancy, just something that can follow a simple rotation, picking at random from songs in various categories, preferably without repeating within a category until all the songs in that category have been used up, and preferably not picking the same artist twice in an hour.

Even an old previously commercially available program probably would do the job, as long as it would run under DOS or Windows.

Any info would be greatly appreciated! Thanks!

(e-mail addresses obscured):

[begin]

From: xxxxx@xxxxxxxxxxx (Mike Callaghan)
Subject: KPPC's Last Broadcast
Date: Sat, 20 Apr 1996 15:49:32 GMT
To: xxxxxxxxx@xxxxxxxxxxxxxxxxxxxxcom
Reply-To: xxxxxxxxx@xxxxxxxxxxnet

The lowest power commerciallly licensed AM station in the U.S. broadcast
for the last tine Friday night. KPPC-AM, 1240 lHz. in Pasadena, CA., is
being shut down so that KGFJ, 1230 kHz., in Los Angeles, won't have to
put up with reducing power during the 22-1/2 hours a week that the
Pasadena station was on the air. In an arrangement struck decades ago,
KGFJ would have to drop from 1000 watts to 100 watts during the hour
KPPC was on the air. This was a royal pain to the owners and listeners
of KGFJ, and the only reason this happened was that KPPC was there
first. KPPC signed on the air in 1924, and ran for 73+ years until
last night.

A farewell program aired the last 4 hours, featuring current chief
nengineer and manager Mark Pompey. A number of former employees called
in and went over their parts in the progression of KPPC, from the days
when the Pasadena Presbyterian Church started it as a way to reach parts
of the congregation. Then it was bought by the National Science
Network, who had -no- idea what they were getting into with a bunch of
hippee freaks broadcasting from the basement of a Christian Church, to
the final dayu when it served the religious community again.

I'm sure Mark Pompey can add to this -- but for me - it was the demise
of my very first station, the one that convinced me broadcasting was a
worthwhile way to make a living, and the one that taught me how to deal
with the parts of radio you'll never find in a book or classroom - the

egos, the drugs, and unique people that call themseves broadcasters.

I'll miss it - and the impact of it's being gone hasn't fully hit me yet.

-- Mike

From: "Mark E. Pompey" <xxxxxxxxxxxxxxx.edu>
To: xxxxxxxxxxxxxxxxxxxxxxxx.com (Mike Callaghan),
xxxxxxxxx@xxxxxxxxxxxxxxxxxue.com
Date: Tue, 23 Apr 1996 19:15:00 PDT
Subject: Re: KPPC's Last Broadcast
Reply-To: xxxxxxxxx@xxxxxxxxx.net

I have been testing my mail filters in Pegasus Mail over the last couple of days so I am just reading this for the first time today. All my mail from Broadcast.net is now being moved to a separate folder as it comes in. Good part is now it does not get in the way of my normal messages, bad part is I miss messages like this one that I would like to respond to right away.

Just a couple of corrections to Mike's comments. KPPC has been operating during nighttime hours since around 1985. We increased our power to 250W at that time. In exchange for both of these items we lost ALL protection from the stations previously required to provide it.

As part of a join agreement presented to the FCC, KGFJ (1230 AM) and KPPC (1240 AM) were to be allowed to broadcast at 400W during nighttime and Sunday hours. KGIL (1260 - Now KJQI?) was no longer required to operate with a nighttime array during Sunday hours. And KDIG (1240 - Now KKLA-AM) was allowed to operate at 1000 W 24 hours a day. Keep in mind the geography here. KPPC was in Pasadena, KGFJ was in downtown LA (just a few minutes down the Pasadena FWY), KDIG was in San Bernandino (about 50 miles away).

KGFJ almost jeopardize this agreement. When the FCC changed the rules to allow Class IV stations to operate at 1000W at night, KGFJ tried to pull out of the agreement. KPPC countered with the restriction that they would still require KGFJ to power down to 100W during the 22 hours that KPPC was on the air. Plus pressure from the two other stations changed KGFJ's mind. A compromise was finally reached that allowed KPPC to get its nighttime hours at 250W, and KGFJ broadcast at night with 1000W.

KPPC's signal actually got worse after this moved. It even seemed like it got worse when they abandoned their old tube transmitter for a solid state Nautel. Our consultant later reminded me that because all of the other 1240's across the country were able to increase to 1000 and the elimination of the protection from local adjacent and co-channel stations, our fringe areas really suffered.

KPPC and its former sister station KMAX were my first stations. KMAX was sold in 1989 and recently changed to a AOR format. KPPC is scheduled to be shut down but the new owner are looking at the possibility of keeping it on until a new transmitter site can be found for KGFJ.

The last broadcast was a sad moment. The new owners had already taken control of the station but they allowed us this one last broadcast. For that I was very grateful. I was happy that we were able to get a good turn out. We had 4 phone ins and about 20 people in studio. That was great considering I could only give them a couple of days notice. I taped the broadcast and have promised to give a copy to the former owners. One of them is promising to submitted it to the Museum of Broadcasting. :)

The excessive rent being charged by the Church (where the transmitter is located now) is being weighed again the small increased coverage area that KPPC would provide. Unfortunately, that small coverage area is the Pasadena area (a rich area).

I need to add at this point that both stations applied for new call letter pending ownership change. KGFJ's call letters have changed to KYPA.

Well I have some extra time on my hands now! Now that I am working at KUSC and a staff member at USC, I now have time for some classes.

WPLT changed call letters in March.
There were rumors about a format change then.
Here's what I think happened.

WPLT had a format change in the works when it fell through. Let me spell it out for you..... They must have had some kind of deal with Jim Harper..... it fell through (which is evident by The deal with 105.1 FM.) They changed call letters when they still had a deal with Harper. So they finally decided to call the station 96-3 DVD and tighten up the music a little bit.

That's just my opinion, though.
Peace Out!

KDAN operated on 1370 kHz with 500 watts directional daytime, and was actually licensed to South Saint Paul.

They started out in the 60s as WMKT. They used a 3 tower array, I believe, to protect KSUM on 1370 in Fairmont.

They went dark in the mid 80s. I think their final call was KMAP.

Same owners (Disney/ABC). Similar music. So far just a
newer sounding "personality." Call was changed some time ago
from WPLT to WDVD, with lightning fast "WDVDDETROIT" legal
ID's tossed in at the appropriate times, but no identity change
till this week.
On the other hand Greater Media's WGRV 105.1 "The Groove" has
ceased to be as of 9am 6/30. It's now Magic 105 WMGC, with
Jim Harper and crew set to start next week, mist likely
with a WNIC-style format.

I do not think that Dean Edell can ever be forgiven for giving up Patrick O'Hearn's "Homeward Bound" as his theme music. Even if it's been almost a decade ago I still have difficulty liking him for changing his theme song.

If a talk show host is not drawing enough ratings he ought to just take care of the problem directly, not change the theme music which is nothing but the last refuge of the desparate, or the efforts of some producer who doesn't know what he's doing trying to cling to and justify his job.

I think talk shows, etc. should *never* change their theme music. I would be like Jeopardy if they ever played a different tune during Final Jeopardy it would almost be blasphemous. Same thing if Rush Limbaugh ever changed his song to something other than My City Is Gone it would almost be unthinkable.

Wrong. In the early days of "Easy Listening" there were giant
libraries of commercially recorded music. I programmed it at WJIB,
Boston, KFOG, San Francisco, then for TM Productions, then for XTRA
and its syndication company.

It wasn't until the end of the format's life that we were forced to
record our own. I was the Creative Chairman of the International
Beautiful Music Association for several years. A group of stations got
together and recorded covers of hit songs. Bonneville recorded a lot,
as did a few independent companies.

Much of the better commercial stuff came from Europe. Like I said,
there were giant libraries of this stuff from major record companies.

No ownership change...they're still owned by those "geniuses" at ABC.

The format has undergone its umpteenth tweak, though, playing a variety of hits, as opposed to "Modern Hits of the 80s, 90s and Now."

My prediction.....96.3 will pick up the "groovin' oldies" format from 105.1 when that station dumps it in order to try to take on (and lose to) AC powerhouse WNIC.

Gee Robert, back in the 1960's there was lots of this music available in record stores by various artists like The Hollyridge Strings, Montovani, Felix Slatkin, Enoch Light and a bunch of others. This was the stuff usually broadcast on the various "Easy Listening" or "Beautiful Music" stations. I specifically remember KIXL and KMAP (and even KVIL) in Dallas were a big deal in this format, as was WJIB and WBOS in Boston. I know most every city had several stations with similar formats. In fact, for a time, it was about all you ever heard on FM. It wasn't until about 1968 when we heard our first "alternative rock" music on FM in Dallas (KNUS).

I worked part time in a record store in Dallas in 1965 & 66. As I recall, this "easy listening" music sold pretty well.

I'm actually pretty surprised that the format hasn't come back.

You are correct that some music of that genre was proprietary, but that was usually "background music" which was specifically recorded (and very compressed) to be sold on a subscription basis to stores, restaurants and other businesses (AKA: Muzak). It was usually carried on the stations SCA channel.

Chuck

andrew@2000computer.com (Andrew M. Saucci, Jr.) wrote

:I used to like listening to what is derisively called "elevator
:music," or possibly more favorably "easy listening." In the New York
:City area many moons ago, it was played on WVNJ, WRFM, WPAT, and
:probably others I've forgotten, as it used to be very common. Now that
:it has been killed off on broadcast radio, the thought of being able
:to hear stations like those again over Internet is appealing. Does
:anyone know of an Internet station similar to any of those old greats?

I am a big fan of this style of music, and I too harbor a grudge
against the broadcast industry for killing off this format.

By far your best option today is get one or more satellite dishes
and receive the music this way. Dishes are a lot more reliable
and much better quality than internet audio.

There are three "elevator music" channels receivable with an 18-inch
dish. One is channel 833 on DirecTV (formerly known as DSS). Just
go to any store that sells these (quite easy to find) and punch
in 833. Cost of this would be about $10/month just to get the
music and a minimum TV package. This is wall-to-wall string
"beautiful music" with about 2000 songs on the playlist and is quite
good.

Similar to this is the Dish Network "Dish CD" music which would be
on channel 973. The format is similar to the DirecTV but has
different songs on the playlist.

A third thing you can receive is the traditional Muzak "elevator
music". Although Muzak provides music to Dish Network, this is
one channel they do not offer in the home subscriber package
(which contains both about 30 stereo channels and about 20 mono
channels which they offer to businesses). However, there is a way
to receive this at home. What you would need is an "MPEG FTA"
(free-to-air) receiver such as the DMT1000 which costs about $250US.
You set up an 18-inch dish aimed at the main Dish Network satellite
at 119W, then program the DMT1000 to find "radio stations" on
EcHO1/2. The channel "ENVOE" is the Muzak elevator music, this
stands for "environmental-east". Muzak used to program their
environmental "elevator" music with both an east cost and west
cost (US) feed which where the west coast feed was delayed by 2
hours. This is because they advertised that the music was
programmed to either stimulate or soothe office workers based on
what time of day it was. Presumably they would up the tempo at
"slow" times of the day such as early morning or before lunch,

or near quitting time. But they dropped having the dual feeds about a year ago, probably because most people don't work exactly 8-5 and hardly any offices play elevator music anymore. This elevator music is a true anomaly, it is the most listened to broadcast in history (as many as 90 million hear it every day) it dates back to 1929, yet everyone says they hate it.

You could also receive the elevator music with an SCA receiver but there is hardly any reason to do this because finding one costs as much as the satellite reciever, the antenna for SCA is much larger than the 18-inch dish, and the audio quality on SCA is atrocious. Likewise there is a way to receive this and other mono Muzak feeds with a 3-foot (90cm) dish and a Microsat 150 receiver but also there is hardly any reason to do this anymore.

Receiving the Muzak feeds off the MPEG FTA receiver will get you about 50 channels (mostly the same ones as Dish Network). There is no legal problem receiving these (or any other unencrypted satellite signals) at home for personal listening but of course playing them in a public place without licensing them would be illegal. On this setup, channel CD24 would be the same stereo EZ channel as 973 on the Dish Network. However, it is cheaper just to get a Dish Network receiver and pay a few dollars a month to subscribe, unless you particularly want some of the feeds which cannot be picked up via Dish Network.

Personally, I have both a DSS (DirecTV) receiver and a DMT1000, I used a "DirecTV plus" dish which can pick up both the 101W and 119W satellites, I feed the DTV with one and the DMT1000 with the other. This gives me all the music stations (about 80 total). Not only is there EZ music but a lot of other all-instrumental channels such as lite jazz and classical, etc.

This is what got me interested in satellite dishes in the first place, being able to listen to the music I like. I am very glad there is an alternative to broadcast radio for music.

Satellite music is programmed for what the listeners want to hear not what Madison Avenue wants. This means playing *all* music formats, playing long playlists (over 2000) so there is song variety, and making it totally commercial free, and the subscription cost is next to nothing. It is playing what people actually want to hear, not some game where they try to attract the maximum number of 25-54 people to fill out the station's call letters in some Arbitron diary, and get some whiny, irritating, fast talking announcer who sounds like he is in pain to rattle of some message as fast as he can in the 3-5 seconds the listener takes to reach for radio button.

It means playing EZ music the way it was meant to be played, which means the percentage of vocals is zero which is always what it should have been. If someone want to listen to vocals, they

are totally free to change the satellite dish to a soft rock or standards station, but the vocals don't need to mixed in with and ruin the EZ music in an ever-increasing percentage. The satellite service doesn't care if you change the channel because they get paid at the end of the month, they want to make you happy which means giving you the choice of what you want to listen to. The radio station does care if you change the station, so they try to please everyone which often means they end up pleasing no one.

Anyway, if you have any questions about this stuff I will be glad to help, email me or better yet post them to the group as I would prefer to keep this discussion public so more people can benefit from it.

I had made quite a few tapes on beta hi-fi of EZ broadcasts back around the late 80's. There were about 150 tapes which were 4 1/2 hours long. I sent the tapes to a guy in Tennessee a couple months ago. There was some talk of putting some of these on a streaming web site, I don't know what progress was made on this. The VCR I used to create the tapes had a failed motor and I recently gave it away to a friend who like to fix broken electronic. I was able to convert a handful of this to CD's before the VCR failed.

As a fan of the Radio Chick, Opie and Anthony and Ron and Fez, I listened to WNEW-FM prior to my relocation. I'd love to hear them again. Unfortunately, stations have pulled their feeds from web pages because of conflicts with commercial providers. They could have replaced the ads in question with PSAs, but NOOOOOOO! There IS precedence for this -- when NBC aired a music video show late Friday nights, there was a simulcast on a station, and the local ads were replaced with PSAs.

Bob,

Your account is there, has been since March 14th. And you've had the same
access to the members-only webpages for as long as it's been available.

And, really, no one would deliberately give you the run around. That's
not at all what we're about here. As a repeat general announcement, if
anyone has technical problems with clug resources, please go to
http://cleveland.lug.net/keystone/ and open a slip on the case. This is
what keystone is for. I'm not saying we'll get to everything immediately.
There's a lot around here which needs to be done and not enough hands to
do it all... why I ask for help once in awhile.

So is anyone game to jump in? We still need someone to handle the kind of
thing you brought up. It and other stuff like it could happen and we
don't want it to.

>I was wondering who would be playing Soul Music , R&B of the 60s and 70s, on 1680.

Possibly WJNZ, Grand Rapids, MI, although I thought they are more current-based. Perhaps a specialty show? (Or current stuff mistaken for the original songs from which they were sampled?)

Just to throw in my two cents- many cable TV companies are including music channels with their digital TV packages. They nearly always carry something of this type. I still remember my grandmother listening to WSHH 100.something FM back in the 70's in Pittsburgh. Mr. Wood mentioned Mantovani, etc. Wasn't there also another "orchestra" call 101 Strings, or something like that? I remember seeing their albums in the music stores when I was a kid.

Only 70's music? Does that include 70's disco as well? Joey Reynolds was good when he was goofin' around with music but that WOR talk crap their syndicating is fuckin' garbage. All you'll get is endless commercials for his cheese cake and those old boring farts (Sid Bernstein, Les Paul, David Randolph(who the fuck ever herd of Randolph outside of and maby inside N.Y. City), Soupy Sales (a tired washed up comedian), whatever halfassed struggling starlet he can drag up from Broadway, some other character BiJohn pitching his endless prosperity bullshit, and don't forget Kramer pitching his reality tours and taking phone orders for Reynolds mouth full of rain book. If WKBW can't afford a live jock with music at those hours when they cover the eastern seaboard, they should shut off the transmitter and save some fuckin' power.

>They went dark in the mid 80s. I think their final call was KMAP.

KMAP it was. Actually, after a period of darkness in the mid-80's, the station returned to the air in 1988 as an urban music station, but not for long. I worked there.

KMAP got 24-hour authorization but the place was a technical nightmare and was (as I found out later) operating way out of spec. With studios in downtown St. Paul's warehouse district, the GM/PD/BOSS (the money men were East Indian businessmen in Canada) was none other than an egotistical upstart from Tampa, Al Alonzo, who eventually moved on to WSKQ/NY, and is now chief of Mega Broadcasting. What a strange route.

I left in spring '89, after working there less than a year, when the staff was asked to hang on a week or two past pay day for salary. I gave them a week or two on good faith and realized that the money was probably not coming. A few months later in early July, during a spectacular thunderstorm with amazing lightning, the xmtr site took a bolt and 1370 in St. Paul was history, never to be heard again. The studio landlord and many employees were left with unpaid bills/salary and the license was subsequently canceled.

Gosh, Steve, lighten up a bit. I agree with what you say about Jeopardy, but is Dr. Edell's show in the same league in the way you're talking about? I have only been listening to him for a few months (Edell is heard on 1350 WSMB in the New Orleans area), so I never noticed the change. Don't let that stop you from listening to his program though. Dean Edell is one of the most common-sense talk show guys out there, and I think his show is great. My partner is a family doctor and he regularly follows up in the medical literature on subjects that he has heard on Edell's program. Maybe it was a sad thing that he changed his theme, but I think it's a great show. Dr. Edell performs a terrific service, especially when it comes to exploding medical myths. He comes across as someone who really cares about people. He's not afraid to say what he thinks- and back it up with science. I encourage you to keep listening.

It totally quit selling in the mid-80s.
>
> I'm actually pretty surprised that the format hasn't come back.

Remember, Top 40 had scads of instrumental hits in the 60's. How many are
there in the last few decades? The genre has changed, and the new easy
listening is soft jazz. No one records the current hits in full, lush
versions any more. Of course, imagine instrumental covers of Spice Girls,
Britney and Eminem songs!
>
> You are correct that some music of that genre was proprietary, but that
was
> usually "background music" which was specifically recorded (and very
> compressed) to be sold on a subscription basis to stores, restaurants and
other
> businesses (AKA: Muzak). It was usually carried on the stations SCA
channel.

This is not quite so. The major syndicators, such as Bonneville, Shulke,
Churchill, EZ and Kala (as well as my Musica en Flor) either separately or
in groups paid to have instrumental covers done of pop hits. I recall having

a library of over 1200 cuts of custom music, which we called the Orquesta M&#65533;sica en Flor and others called the "E-Z Strings" and such. Custom music was a bit easier to match-flow with, and often gave you versions that were acceptable of Top 40 tunes. We also licensed lots of tunes from the orchestras of the BBC in London, giving us a lot of additional versions and titles.

Due to tempo and mood, a syndicator often had alternate versions of a song, one brighter for mornings, a mid-tempo for office listening and a slow one for evenings! However, all the tunes were very familiar and melodic.

Eventually, the ever-older demos, the perception that the format was background and did not sell and the lack of product did the format in.

We used to call it "dentist music".

Prior to 1968, for the most part, all you heard on FM was classical music, "dentist music", or in the case of AM/FM combos, the FM side would, for the most part, just simulcast the AM side of the operation.

Around 1966, the RKO General combo of WNAC(AM) and WRKO(FM) chugged along, mostly in simulcast. Then WRKO(FM) became Boston's first FM rock and roll station - top 40, and in an experiment - had a talking robot (Ahr-Ko or R-KO) that didn't talk much but played an automated format. IIRC it lasted a couple of years but they shortly converted the AM side to WRKO(AM) and went to a standard top 40 format and threw their pop music effort at that side, very successfully.

2487. Beta Testers Wanted

Hello Broadcaster,

IkonSoft is looking for beta testers of their new WEB BASED Music Scheduling System.

This software will do everything the major leased Schedulers will do plus you don't have to be married to your desk at work. You can access IkonSoft from any browser.

No Need to even print out the Playlist. Just put a browser in the on-air studio.

Outputs to all Digital system.

Even Merges your Traffic for one neat Program Log.

Sign up for the beta program now. They will be handing out user accounts starting 7/15/01.

OK maybe it's been too long since I read it, but I remember reading some
article in a radio trade magazine that talked about the music that made up this
format and how most of it was never comercially released. Should have clipped
that one for my files <g>

Ahh well... :)

WCBN WILL DESTROY YOUR FEEBLE FORMATS

WCBN - Over 25 Years of Freeing Your Mind - Listen to us online!

WCBN is the University of Michigan student-run community freeform radio station in Ann Arbor, Michigan. We broadcast at 200 watts to the University and its surrounding communities from the basement of the Student Activities Building in downtown treetown. We have been broadcasting a genre-less overview of music, news, and public affairs for over 25 years.

WCBN's musical format is freeform, with some specialty shows. Freeform involves all different kinds of music, including jazz, reggae, blues, hip-hop, country, rock, and just about everything else under the sun. Instead of telling our DJs what to play, we allow them to select their own recordings from our vast and unique library. It is their responsibility to mix together many different kinds of music in an intelligent fashion, and show links between musical genres.

Click here to listen to our live WCBN-FM Ann Arbor broadcast!

I am still seeking investors to help me acquire a fulltime AM and Class "A" FM CP in a small town in Mississippi.

Active or inactive investors with at least $10,000 are welcome.

The seller is asking $350,000 for the pair on terms.

About 6 acres of AM tower land are included.

City of about 21,000 people with about 31,000 in the county.

I am an FCC licensed radio engineer, semi-retired and age 66.

You can email me at: wrecktech@yahoo.com or call (478) 741-1710 in Macon, GA. Early mornings best, Tues. to Saturday. Internet addict!

Last night I was fortunant enough to hear the big cleveland switch involving WKNR 1220. Unfortunantly hear in Kalamazoo Michigan 850 couldn't be heard except for some british sounding newscast.

However when WHK switched to 1220 there was a big mess which involved the SRN news headlines and a program called hope in the night having been layed on top of each other. This lasted for about 10 to 15 minutes before hope in the night ended up the main program.

Was kind of interesting to say the least.

I read the "Plastic Jesus" thing and found it to be delightfully offensive! Where do people come up with this stuff? It's one of those things that one thinks is hilarious but doesn't want to admit it to anyone because of what they might think of him..I found it to be humorous much in the vein of Sam Kinison's religious jokes. After reading it, I was afraid to smile for fear of that bolt of lightning that just might crack from the sky and smite me on my demented little skull. One definitely needs a certain sense of humor to appreciate such material. Does anyone know where a recording of the song might be found? I'm one of those who believes that God has a sense of humor, otherwise He never would have created us...

Source record: 13907

>Satellite music is programmed for what the listeners want to hear
>not what Madison Avenue wants.

What baloney. When do you ever think the advertising industry on Madison Avenue
went against consumer desires to foist its own preferences on the public? It lives on "what the listeners want to hear," lives and dies by ratings, popularity, and carefully gauging and filling consumer demand.
EZ music, "elevator music," Muzak (tm) and "Easy Listening" are not synonymous. Muzak and most background music for public places included some original compositions but many instrumentalized versions of popular songs. I had to shudder one day in the grocery store to hear a light, airy casual version of the Beatles' "Revolution" coming over the speakers, surely not something they intended when they did the song.
Easy Listening radio was a specific format that included current pop songs but only those with a certain low-key profile, and many were vocals.
The format was dropped because no matter how many people heard it, none paid any attention to it. Advertisers got zero response, they pulled their bucks, the stations changed to a zippier format that would grab attention and bring clients into advertisers' stores.
Think the company that charged clients for its Muzak would mind you streaming it on the web for free?

2497. United Patriot Radio 6.900 USB is back

Newsgroup: rec.radio.broadcasting
Date: 2001-07-04 19:22:43 UTC
From: gherkin jerk <fpotters2@aol.com>
Message-ID: <tk6r83kdsno4d9@corp.supernews.com>
Source record: 13908
Cross-posted to:
alt.radio.scanner.flame_fest,rec.radio.amateur.misc,rec.radio.amateur.policy,rec.radio.broadcasting,rec.radio.shortwave

It appears that, after a month long hiatus, United
Patriot Radio has returned to the shortwave airwaves.
They are currently transmitting on 6.900 kHz USB with
a moderate strength signal. They started at 7:00 PM
Central Time. It looks like their back to their original
schedule of 3 hours broadcast per night, this being
7:00 to 10:00 PM Central Time. In past the "live" portion
of the show with Col Steve has been from 9:00 to
10:00 PM Central (10:00-11:00 PM EST). The station
is alleged to be in Eastern Kentucky, and is set up as a
Militia type "free radio" outlet. The current debate is if UPR
is either a Clandestine or a Pirate station. The difference
being a Clandestine is on the air for purely a political or
sectarian purpose, wheras a Pirate is more a station set
up purely for the amusement of the operaters and it's listeners.
Regardless of where UPR falls into classification, enjoy it while
it's on the air setting a new milestone for free-radio operation.

end.

Hi Folks,

This Sunday July 8th at 1500 UTC (11:00AM EDT) we will attempt to put into perspective, the big switch of Radio Stations that occurred in Cleveland, Ohio this past Tuesday, July 3rd. About 8 Radio Stations in Cleveland either switched frequency, call signs, or format (or all of the above). It can be heard on "The Worlds First and truly interactive Radio Monitors Netcast -- "CyberShortwave Live!" Details on how to listen are on my Web Site http://www.n1dk.com
You are encouraged to participate in the live netcast via IRC Chat Channel #cybershortwave via a Starchat server.

Those who know me can bet that I will dig into my archives of Cleveland Radio of the past also.

I currently have a replay of a past netcast running so you can set-up your link now.

Cross-posted to: rec.arts.theatre.misc,rec.arts.theatre.musicals,rec.radio.broadcasting,rec.radio.noncomm,stl.general

The latest edition of the STAGE LEFT webcast went on line today (July 4). Listen to it any time with RealPlayer at http://www.stageleft.org or http://www.kdhx.org/listen.htm Send me a note with your comments at chuck@stageleft.org

This week it's a red, white and blue special, including the original and revival cast recordings of "1776", songs by George M. Cohan, Broadway marches, and silly stuff by Stan Freberg, Albert Brooks and the Guckenheimer Sour Kraut Band. You can get both the current episode of STAGE LEFT and the last four shows at http://www.stageleft.org or http://www.kdhx.org/listen.htm. This week's play list is at http://www.stageleft.org/010704.html

Next Week (7/11): "Now Playing" - Another in our recurring series featuring soundtrack recordings from current movies. This time we've got "Final Fantasy", "Jurassic Park III", "Bride of the Wind" and "AI".

2503. Texas LPFM Applications

Newsgroup: rec.radio.broadcasting
Date: 2001-07-04 19:22:52 UTC
From: chuxgarage@aol.com
Message-ID: <tk6r8craj9vve4@corp.supernews.com>
Source record: 13914

I have compiled a list of LPFM applications for Texas. It is interesting reading, but too large to post here. Therefore, I have them set on two web pages.

To see a list by frequency, follow this link:
http://www.chalkhillmedia.org/tx%20lpfm%20freq.htm

To see a list by city, follow this link:
http://www.chalkhillmedia.org/tx%20lpfm%20%20city.htm

If you are unable to get the links to work, go to http://www.chalkhillmedia.org and click on the area you'd like to visit on the menu bar.

Anyone is welcome to link to these pages, however please don't just cut and paste them into your web site without permission and proper credit.

Happy reading.

Chuck

2505. Missouri and Indiana license revocations

Newsgroup: rec.radio.broadcasting
Date: 2001-07-04 19:22:55 UTC
From: markrobt@yahoo.com
Message-ID: <tk6r8fgsvlpue6@corp.supernews.com>
Source record: 13916

The six-year-long FCC process to revoke the licenses of five Missouri and Indiana stations has come to a conclusion.

On July 3, the FCC released the procedures it would put in place to keep the stations on the air until their licenses can be auctioned. The five stations were formerly licensed to corporations controlled by Michael Rice, convicted by a Missouri criminal court in 1994 on twelve counts relating to sexual assaults on teenagers.

After the 1994 convictions, the FCC the following year issued an order to show cause why Rice's station licenses should not be revoked as a result of the felony convictions.

The FCC will allow the stations to remain on the air for up to 90 days after their license revocation date of July 13. Any profits from the stations are to be donated to local charities. Applications by companies wishing to operate the stations on an interim basis will be accepted the week of July 16. The companies chosen by the FCC as interim operators will run the stations until they are auctioned off.

The stations involved are WBOW(AM), WBUZ(AM), and WZZQ(FM) in Terre Haute, Indiana; and KFMZ(FM) in Columbia, Missouri, plus KBMX(FM) in Eldon, Missouri. Two other FM construction permits in central Missouri have been revoked as well. FM allocation proceedings involving the Missouri stations were dismissed in April.

In 1997, FCC administrative law judge Arthur Steinberg revoked the licenses and CPs held by Rice's corporations. Steinberg was asked to determine whether Rice's felony convictions disqualified him from being a licensee under the Commission's policies on the character of licensees. He was also asked to determine whether Rice engaged in the unauthorized transfer of control of the companies. After Rice's arrest in 1991, his companies argued before Steinberg, he removed himself from control of his stations' operations.

Steinberg found that Rice continued to be in control of the stations and, as a consequence of his felony convictions, the licenses should be revoked. The full commission upheld Steinberg in 1998, stating in its order (FCC 98-133) that, "in agreement with the ALJ [Steinberg], we find that Rice's felony convictions and the Licensees' misrepresentation and lack of candor with respect to Rice's role at the radio stations subsequent to his arrest constitute separate and independent grounds for disqualification of the Licensees."

According to subsequent Commission documents, the U.S. Court of Appeals for the D.C. Circuit upheld the FCC's order last year. The U.S. Supreme Court declined to review the case on March 19 of this year.

On June 1, Rice filed a petition to permit his companies to keep their licenses or to permit them to be sold. The FCC dismissed that petition in its latest public notice (DA 01-1441), stating that the licenses already have been revoked and that, "Mr. Rice has no radio stations to retain or assign".

Rice's companies will be allowed to continue operating the stations until the FCC has chosen interim operators for them. In such cases, interim operators normally are required to donate their profits to charity as well, but in this case, the commission said, "permitting an interim operator to profit from its temporary operation will generate more interest in such operation, and thus facilitate continuity of service to these communities".

The AM stations will be included in an auction previously scheduled for AM stations, but no date was given for that auction. The FM stations will be included in an auction that already was scheduled for December 5.

I am looking for radio stations that broadcast on the web (If there is any left) That broadcast The likes of Howard Stern, Mancow, and other similar syndicated morning personalities.

Hell I could listen to morning radio all day at work if I new what stations were broadcasting these and at what time of the day.

I am in the EST time zone,

Can anyone help me with this one??

Randy

From: Ron Hardin <rhhardin@mindspring.com>
Message-ID: <tk7jcosnmijb39@corp.supernews.com>
Source record: 13919

I missed the whole announcement. Tuning in 1220 I hear WHK at the
moment, listening in Columbus, very weakly. They either have no power
or are beamed some other direction.

(R8B listening on LSB to avoid the local 1230 station, and Kiwa MW loop
antenna.)

sound clip at http://rhhardin.home.mindspring.com/whk.ra (11k)
surprisingly weak given it's only 100 miles.

[Moderator's Note: Not surprising. 1220 has alawys been extremely directional.
The signal is not pointed south; the radio station and transmitter are located
on Ohio 176 in Broadview Heights, on the southwest edge of Cuyahoga County, and the signal
is pointed north into downtown. It's hard to get a decent signal on
1220 south of the signal, especially as far south as CMH.]

Just a guess, but maybe the CBC likes the three-letter "CB..." calls
for themselves, and that understanding was included in the sale, or CBL
is now the CBC's FM station call.

Who cares about call signs? Not much of anyone anymore...especially the loser radio stations in this country that rotate them along with the next gimmicky, meaningless slogan every 2 weeks because they don't know how to keep and entertain an audience.

Did that answer your question?

KJOI-98.7 or whatever here in LA was the quintessential "elevator music" station
for many years...but in its last few years (1991-ish?) it started to play more
vocals,
becoming more like an Easy Listening outlet.

>

I think "Smooth Jazz" killed "Elevator Music" somewhere in the late 80's...

Don Imus released an LP (those 12" vinyl things) of some of his better
bits, and Plastic Jesus was included on it.

I am working entirely on memory too clouded from years of abuse, but I
believe the title was "10,000 cheeseburgers to go," and was based on a
call-out bit (when those were legal) to a fast food joint placing a
rather large order.

In Imus' version, two of the lines were:

I can go a hundred miles an hour
as long as I've got the almighty power

They used to play one version of this song on the "Doctor Demento" syndicated show, still might for all I know. It's a spoof on the radio preachers from the days of the "Border Blasters" (the Del Rio reference in one of the versions should tip you off).

I don't think the song is blasphemous or anything like that (others on that site might bother,
some people though...) as it's more of an attack on the preachers selling plastic icons,
rather than on Jesus or Christianity in general. At least that's how I see it.

I missed the whole announcement. Tuning in 1220 I hear WHK at the
moment, listening in Columbus, very weakly. They either have no power
or are beamed some other direction.

(R8B listening on LSB to avoid the local 1230 station, and Kiwa MW loop
antenna.)

sound clip at http://rhhardin.home.mindspring.com/whk.ra (11k)
surprisingly weak given it's only 100 miles.

I am looking for radio stations that broadcast on the web (If there is any left) That broadcast The likes of Howard Stern, Mancow, and other similar syndicated morning personalities.

Hell I could listen to morning radio all day at work if I new what stations were broadcasting these and at what time of the day.

I am in the EST time zone,

Can anyone help me with this one??

Randy

>>
Just a guess, but maybe the CBC likes the three letter "CB..." calls for themselves, and that understanding was included in the sale, or CBL is now the CBC's FM station call.
>>

CB-- calls are not available to private owners.

>>
I heard that they wanted anything with "AM" in it, and WTAM turned out to be unused. Entirely coincidental with the history.
>>

So, your claim is it was *entirely coincidental* that the current WTAM elected to return to its original, "historical" call, which was WTAM? That WAAM, WBAM, ... WSAM, WTAM, WUAM, ... WYAM and WZAM were all equally probable choices, if available.

Amazing!

The CB- prefix actually belongs to Chile, not Canada. Somehow, Canada used
it anyway. Internationally, the CB calls form Canada are nonconforming with
prefix allocation.

I believe that is true. WTAM had not been used in Cleveland since the 50's,
and few would remember them. Even fewer in the 25-54 sales demos.

The directional pattern was definitely out-of-spec.

I never heard KDAN from my location in Apple Valley. Was right in the null towards Fairmont. But I heard KMAP loud and clear in 1988! Also remember KMAP saying they had 5,000 watts of power. How'd they get to 5,000 from 500?

I have about 2,000 hours of OTR programs that are on audio tape. I have been collecting OTR programs for the past 25 years. I need to dub them from tape to my computer to save them. What is the best way to save them once I get them into the computer? My computer is not big enough to hold that many hours of programs, What type of a back system can I use?
Thank You For Yor Help,

I think we're going to just have to "agree to disagree" on this one. You're obviously a broadcaster, I'm just a listener (who happens to understand the broadcast industry more than the average person does). I'm sorry, but Madison Avenue does not put consumer's desires first. When I turn the radio on I want to hear music (or other programming). The broadcaster's main interest is making me listen to commercials. From square one we have different goals.

Also, I'd say that the death of "easy listening" radio is a prime example of how the advertisers are controlling radio. This format did not die because of lack of listenership (in most markets the the stations were pulling over a 5-share overall). It was killed off because it couldn't sell advertising, not because people didn't like listening to it. Because the 25-54 numbers were not high enough. It's Madison Avenue which has made the decision that only people 25-54 are of any value. And the fact the people didn't listen to the commercials as intently on this format. Again, Madison Avenue calling the shots, not because a lot of people didn't enjoy it. Because they couldn't run beer commercials in the summer. I don't listen to the radio to be told what brand of beer to drink, does anyone?

> EZ music, "elevator music," Muzak (tm) and "Easy Listening" are not
> synonymous. Muzak and most background music for public places included some
> original compositions but many instrumentalized versions of popular songs. I
> had to shudder one day in the grocery store to hear a light, airy casual
> version of the Beatles' "Revolution" coming over the speakers, surely not
> something they intended when they did the song.

The terms "EZ" and "easy" almost have as many different meanings as there are individuals. I personally use the term to describe instrumental recordings of popular songs, because I don't know of any other term which will work. But, yes, "easy listening" can just

as well be used to describe a soft all-vocal format. The original
Muzak (properly termed envioronmental music) is slightly different
from the instrumental covers which were played on radio. One difference
being that Muzak uses fewer string instruments.

> Easy Listening radio was a specific format that included current pop songs
> but only those with a certain low-key profile, and many were vocals.
> The format was dropped because no matter how many people heard it, none paid
> any attention to it. Advertisers got zero response, they pulled their bucks,
> the stations changed to a zippier format that would grab attention and bring
> clients into advertisers' stores.

As I already said, this was exactly my original point. As a listener
I don't care a whit about the commercials but I do get mad when my
favorite music is taken off the air.

> Think the company that charged clients for its Muzak would mind you
> streaming it on the web for free?

First of all I have absolutely *no* intention of ever streaming
proprietary Muzak music over the web, nor have I ever even given
away any recordings of it. What I did do was make tapes of
broadcast easy-listening radio (off the public airwaves) in the
late 1980's. While I had the tapes I only used them for personal
listening. Earlier this year, I gave them to another individual
simply because I could not stand to throw them away. The other
person has suggested they might stream some of this stuff off the web.
I don't know whether or not this would fall under fair-use doctrine
but why would it be a problem putting up defunct music (which no one
makes any money selling) from defunct radio stations? Who would care?

"Rice's companies will be allowed to continue operating the stations until the FCC has chosen interim operators for them. In such cases, interim operators normally are required to donate their profits to charity as well, but in this case, the commission said, "permitting an interim operator to profit from its temporary operation will generate more interest in such operation, and thus facilitate continuity of service to these communities"."

If Rice can't hold any broadcast licenses any more, and he can't keep the profits from continued operation of these stations, what incentive is there for him to keep the stations on the air until interim operators are found, or to allow the interim operators to use his facilities? Why wouldn't he just take the stations dark? What would he have to lose?

WNCT-FM in Greenville NC ran what they called a "beautiful music" format until the late 1980s. They were owned by Park Broadcasting, and they ran CBS-FM's "Young Sound" format until sometime in the 1970s, at which point they switched to their own syndication service. This was operated out of WPAT AM-FM in New Jersey, which was also a Park station. I worked at WNCT-FM and remember hearing the "Twin Peaks" TV show theme in the rotation, to give some idea of how recently that was. I do wish someone could set up a web stream of the "Young Sound" format for its retro value. For some reason, it made great poolside music in the summertime.

A grudge against the broadcast industry for killing off BM: The broadcast industry didn't kill it off. The audience aged and died off, and younger people were not interested. One of the major eastern BMers conducted a study to find out how and if BM could appeal to those under 35. They got a resounding "no way!" If the audience was there, so would the format be there. The same thing is happening with oldies, they're weeding out 50s and early 60s for early and mid 70s. If they don't want to age and die out with their audience, that's what they do. The closest modern equivalents to BM are smooth jazz and soft or "lite" A/C.

Ah, I remember the days working in a warehouse in Chicago where FM 100 (I believe WLOO 100.3) would be played. Problem is, 8 hours a day, 40 hours a week.....I could swear I could set my watch to the songs.....Every once in a while a song with singing would be played (Sonny, which is the name of the gal which would get annoyed by all singing her name along with the song)

Do I miss it? Yeah in a weird way...Enough to support advertisers??? Heck no!

Get two things, the first is a program called Cool Edit 2000, this
is the only one that will let you record with no limit on how long the
recording is. Also get a CD writer and replace your existing
CD-ROM drive with this. This way you can save up to 650 Megabytes
on a CDR disk. With Cool Edit you can save the files directly in
MP3 format if you do not have the the space on the hard drive to
save the music as an uncompressed WAV file. It takes 600 Megabytes
to store an hour of raw audio, but it can be compressed as MP3. For
Old Time Radio, probably 40Kilobit/second MP3 at 22050Hz sample rate
mono would be sufficient. In this case the raw wave file audio would
be 150Megabytes per hour, with MP3 it would be about 14 Megabytes per
hour. A single recordable CD would store 40-50 hours of recordings
in MP3.

If you use a program like MusicMatch Jukebox, you can choose the resolution you burn them to as mp3's... a very low resolution is just fine for OTR, due to the fact there is no dynamic range or high end to it.. you could make them in say 24kps mono mp3 files, and they would sound pretty much identical to your tapes. You could then probably store each program on a floppy disc..

Would you like to see these old reels of music turned into
MP3's and/or audio CD's?

As of 7/6/2001 the SCA is still playing Muzak, I have one
of those Superradio's which has SCA decoders installed
in it. Long time since I've ever listened to SCA but it's
still there. Mostly I use that radio because it has an
input jack and I sometimes play a CD with pink noise on it
at night because it's pleasant and drowns out other noises.
Sometimes I even play the pink noise while falling asleep
to the radio because it helps make the commercials less
annoying. The advertisers have to play all sorts of
tricks to make themselves get attention, like make themselves
sound louder by talking fast in an unnatural high-pitched voice.

Of course Madison Avenue has the listener's best interests at
heart because people actually *want* to be woken up when an
important commercial comes on (sarcasm mode on).

Muzak is still using the SCA's but some other background
music services have abandoned them in the past 5 years. Back
in 1998, Muzak reported that they had 135,000 installations
which used the 3-foot dishes. They had to readjust all these
dishes when the Galaxy 4 satellite failed and they were
relocated to Galaxy 3. At this time this was slightly more
than half of their installations (the total must be around
a quarter million). The rest of them would have to be divided
between SCA's and 18-inch dishes. In a handful of cities they
use a 928-Mhz signal instead of SCA because the FM signal
does not propagate will in hilly terrain. I do see a fair
number of businesses with nothing but FM yagis on the roof.
Muzak also uses 2 Gigahertz terrestrial digital broadcasts
in a few cities (Houston is one).

Muzak started sending out the background music via telephone
lines around 1929. In the 1950's they started using SCA's
on FM radio stations. In the 70's they added a second channel
of light rock called Foreground Music One, also at this time
they started sending the music to radio stations by C-band

(large dish) satellites. The SCA's carry the elevator music on the 67Khz subcarrier and the FM1 on 92KHz. (Some radio stations also use a 57Khz SCA for other purposes). In the late 80's they increased their offering to 5 channels and started using Ku-band (3-foot) satellite systems. They increased the number of Ku band channels in the early 90's and around 1995 they started using the digital transmissions on the 18-inch Echostar (now called Dish Network) satellite systems. Currently they offer about 50 channels, 30 which are stereo and relatively high-fidelity most for home subscribers, an about 20 which are mono and highly compressed in dynamic range for background music in businesses.

Curiosly enough, they have actually increased the percentage of instrumental covers in their elevator music channels. For a long time it was about a 50-50 mix of lite jazz and covers now it seems closer to 80 percent covers.

WKAZ RADIO, CHARLESTON WEST VIRGINIA

Back in the 60's and 70's in the heyday on AM top-40 radio, WKAZ AM 950 rocked the Mountain State. A website memorializing the radio station is now online:

http://www.95wkaz.com

Several recent additions to the website were recently added, including some photos and stories from 1959 (see the Voices section for a contribution from former WKAZ staffer Robert W. Lilley) and another section on the 1967-1973 era from Roben Jones and Jill Simpkins (also in "Voices").

I am still attempting to contact former staffers, announcers, etc. who worked at WKAZ Radio between 1957 (when the station changed calls from WKNA) and today. Anyone with souvenirs, memorabilia or information is encouraged to contact me.

My e-mail address is rick@oh9.com

Thanks.

Anyone know what plans are in place for analog transmission of FM Radio going away? I've heard rumblings about long term plans to replace Analog FM transmission with a digital transmission format long term. Anyone have web sites with more information ?
Bob

It's not my claim, just what I heard, I think on one of the radio usenet groups. The poster could certainly have been in error, or my memory faulty.

I think you guys are explaining how the industry ruined a format. Is this news? No. Experiments with beautiful music in science labs indicate that with good stuff and variety those young kids said "AWESOME" and complained when it wasn't available. Not enough advertisers to support it, you bet with the rectum focused mind set of most advertisers and broadcasters.

Best,

Tony

Greetings All:

Beautiful music. Elevator music. Dentist music. Easy listening. Muzak. All of these labels for songs whose melodies were memorable and lyrics were understandable were stigmatized by an advertising community that failed to catch and adapt to what demographer Ken Dyckwald has called "the age wave."

Read the popular press and you'll catch the essence of what Dyckwald was trying to capture in the buzz phrase. The "older listeners" of today wouldn't be caught dead listing to an endless cycle of The Living Strings, as may have once been the case several decades ago.

But they also have grown tired -- these folks in their 40s, 50s, 60s and beyond -- of seeing so-called Lite stations and Soft ACs slipping songs into their playlists to which this audience can neither relate nor accept. All in an effort to "not be boring."

As has already been pointed out in this space, the reason seems clear. The selling demo remains 25-54...emphasis on the sub-40s...and anyone older remains off the radar screen of most program directors whose stations are not predominantly spoken-word.

I heard it said once that a person's "musical age" is set in their mid-teens. The music they remember from, say, age 13-18 is what lives most vividly in their hearts and minds -- and becomes the reference point, the touchstone, for the musical syles they'll favor as they age. This is probably what makes oldies stations an enduring favorite in many markets; even though they draw older audiences, those audiences are extremely knowledgeable musically -- and intensely loyal. They listen often and for long periods of time. Sales managers like audiences like that. And so do advertisers looking for real impact.

The dirty little not-so-secret secret about older listeners is that they hold the largest share of disposable income, and are not as brand-loyal as and far more experimental and experiencial than they used to be. They travel a lot, buy expensive new cars, treat themselves to lots of luxuries that they feel they've earned after years of hard labor -- and though more active than their counterparts of years ago, really like settling down with great radio.

And if they are like my parents, they are truly pissed off that there is so precious little for them to listen to on the radio these days.

Since when did it become a crime against society to play Barry Manilow, Neil Diamond, the Carpenters, Olivia Newton-John, Herb Alpert, Dionne Warwick,

Janis Ian, James Taylor, and dare I say Johnny Mathis? Who's afraid of Tony Bennett? Certainly not MTV, among the most prominent arbiters of what's hip, hot and happening!

Who among us will be the bold programmer to create the next new format -- Contemporary Classics? Enduring music from the singer/songwriters who defined a generation. Music for people old enough to know better. The tunes you can't get out of your head -- the lyrics that touch your heart. There you go -- imagers and liners and all.

Stop laughing. There are precious few untapped audiences out there left for one station in a market to really dominate and own. The boomers made us. And they'll sustain us -- long after Britney and her ilk have flamed out.

|>Wasn't around at the time, but this sounds a lot like the stuff my father
|>repeated to me about the old days of Don Imus on 66WNNNNNNNNBC.
|
|Don Imus released an LP (those 12" vinyl things) of some of his better
|bits, and Plastic Jesus was included on it.
|
|I am working entirely on memory too clouded from years of abuse, but I
|believe the title was "10,000 cheeseburgers to go," and was based on a
|call-out bit (when those were legal) to a fast food joint placing a
|rather large order.
|
|In Imus' version, two of the lines were:
|
|I can go a hundred miles an hour
|as long as I've got the almighty power

"... right up there with my pair of fuzzy dice."

Imus revived Billy Sol Hargus recently, producing some new
segments, when he took over a former AM Gospel station (WALR) in
Atlanta for "All Imus, all the time". For all I know, it's still
playing Imus 24/7, even though he's been on vacation for two weeks.

According to <http://users.ece.gatech.edu/~mleach/radio/am.html>
"In early May 2001, WALR pulled the gospel format and replaced it
with an Imus 24/7 format. The station will convert to syndicated
talk with CBS radio news on the hour, being billed "Talk Radio
1340/WCNN." The calls will remain WALR."

As of 7/6/2001 the SCA is still playing Muzak, I have one of those Superradio's which has SCA decoders installed in it. Long time since I've ever listened to SCA but it's still there. Mostly I use that radio because it has an input jack and I sometimes play a CD with pink noise on it at night because it's pleasant and drowns out other noises. Sometimes I even play the pink noise while falling asleep to the radio because it helps make the commercials less annoying. The advertisers have to play all sorts of tricks to make themselves get attention, like make themselves sound louder by talking fast in an unnatural high-pitched voice.

Of course Madison Avenue has the listener's best interests at heart because people actually *want* to be woken up when an important commercial comes on (sarcasm mode on).

Muzak is still using the SCA's but some other background music services have abandoned them in the past 5 years. Back in 1998, Muzak reported that they had 135,000 installations which used the 3-foot dishes. They had to readjust all these dishes when the Galaxy 4 satellite failed and they were relocated to Galaxy 3. At this time this was slightly more than half of their installations (the total must be around a quarter million). The rest of them would have to be divided between SCA's and 18-inch dishes. In a handful of cities they use a 928-Mhz signal instead of SCA because the FM signal does not propagate will in hilly terrain. I do see a fair number of businesses with nothing but FM yagis on the roof.

FM as we currently know it will be (they say) done away with. IBOC (in band on channel) is going to be the new choice in a couple of years. It looks like AM is going to be the first band to use it then up to FM. It actually sounds great and has a tremendous amount of potential. I just hope the FCC handles this situation better than they did with AM stereo. You can get some further info at www.broadcast.net and take a look at the archive files and the newsgroups.

I got in on this thread a bit late, but I have a 7" reel of Don's 70's album "This Honky's Nuts", the title of which was a spoof of Richard Prior's album "This Nigger's Crazy".
It includes a rather lengthy segment of Billy Sol Hargus as well as "Plastic Jesus".
It was extremely risqu&#65533; stuff for 1974, but it has got to be one of the funniest 50 minutes ever recorded.

David Eduardo wrote:

> The CB- prefix actually belongs to Chile, not
> Canada. Somehow, Canada used it anyway.

Canada started using "CB..." calls for CBC radio stations in, or shortly after, 1937. Canadian authorities at the time cited a 1932 convention (the General Radiocommunication Regulations of Madrid), which allowed the use of any desired call letters in situations where no confusion was possible with stations in the country that "owned" the call letter block in question.

I got the above info from an Industry Canada spokesman in 1995. As far as my source was aware, Chilean authorities were never consulted regarding the original decision to let the CBC use "CB..." call signs. My source did not know whether Chile had ever formally agreed (or objected) to these calls.

Hi, all...

I am working on a series of stories for a radio broadcast trade in which I will tell the stories of some classic transmitter sites....or some classic stories about plain-old sites. Or haunted sites.

The first story I did on this was ten years ago in Broadcast Engineering. It concerned the KLIF Dallas night site (at that time) which is a twelve tower array that, from the air, with lights on, looks almost like a runway. And the pilot that almost landed there.

If you have a story, or know an engineer that does, that is funny, bizarre, shows an engineer's great skill or creativity, or even his stupidity or temporary insanity, please contact me or have the engineer do so. Even if it involves people that are retired or passed on, I would like to hear about it. The only requirement is that it must involve a transmitter site in some way. Please reply by email (remove the [nospam] part).

Thanks!

Steve Walker

Yes, and DirecTV has 20 or so different channels to choose from.
The "Instrumental Music" channel is actually very good stuff! I'm
really
surprised, as I expected "top 40" instrumental in a loop quality.
Instead
it seems somebody genuinely cares about what they feed into that
channel.

Does this mean all current AM and FM receivers will be useless in a
couple of years?

(Does this mean I'm going to have to buy a new car? ;-)

rfrx wrote:

Hi,

The Joe Reisman's Orchestra & Chorus (RCA Victor 47-6121) cover version of the song "Bo Diddley" was one of several released in the weeks following the release in March 1955 of BO DIDDLEY's original recording of the song.

The Harmonicats also quickly recorded and released a cover version on Mercury 70629, as did the singer Jean Dinning on Essex 395.

The song "Bo Diddley" was, of course, written by BO DIDDLEY and credited to him using his real name of Ellas McDaniel.

David Blakey, Webmaster,
BO DIDDLEY-The Originator

We're looking for STLs for LPFM stations. Trying to avoid going the licensed route (for the STLs, that is!) There is plenty of unlicensed wireless 2.4 GHz hardware out there. Anyone used this for audio purposes? Much of this equipment is intended for wireless ethernet, but are there some Part 15-certified links for audio? Link distance needed 1-5 miles.

I just hope he's on the air live when the FED's start to
move in with their APC's and black ninja suits
with infrared scopes....
Should be fun listenin when he's (literally) blown off the map and
all that's left on 6.9 Mhz is rtty and thunderstorm static.

On what planet? Heck, when I was a kid (mid-70's), most of my
classmates *hated* that stuff. It wasn't what they called "rock-n-roll"
(or disco...)

Mention KJOI (the FM "elevator music" station in LA) in school
and prepare to get booed...

As I understand it, there are no firm plans from the FCC to start digital broadcasting on AM and FM.

However, there are a few systems in place to allow IBOC - In Band On Channel broadcasting of digital radio signals. I understand it sounds very good. I also understand that some of the systems can be done over the current signal without disrupting analog reception.

If that's the case, it's possible the FCC could allow stations to start broadcasting this way immediately after their engineers determine it won't harm the current system.

We will see.

No, they are off the radar screen to advertisers. If advertisers would support such programming, more broadcasters would program it. But advertisers not only refuse to support it, they are becoming more militant by the day about NOT buying upper demographics. The attitude among the biggest-spending radio advertisers can be summed up as "We don't care how many older listeners you have. We're not paying to reach those people."

>
>Who among us will be the bold programmer to create the next new format --
>Contemporary Classics? Enduring music from the singer/songwriters who defined

>get out of your head -- the lyrics that touch your heart. There you go --
>imagers and liners and all.

It's been done. In a few places it's being done. (Fresno and Las Vegas come immediately to mind). But it doesn't bring in revenue in proportion to the number of listeners it has. That may be unfair, or shortsighted on the part of advertisers, but all those arguments have been made and the advertising community for the most part has consciously and affirmatively rejected them. As long as advertisers demand "young," radio and TV will try to deliver "young."

Howard,

Great letter and message. True and unfortunate in 1000 ways.

Until media can escape the strangle hold of Madison Avenue (and it should start trying, NOW), we will not see media for everyone anymore. Just radio and tv for the 14 year olds with the usual sexed up crap. The only changes are new faces or voices but still the same old whore.

It would make more sense to license him by Act of Congress, put the loafers
over at Printing and Engraving to making him one very large and ornate
certificate, have it presented by an important official like the township
road commissioner, and hire the local high school band to play Looney Tunes
during the ceremony and play for the Beer and Polka party afterwards.

Every high school band member should practice Who Stole the Kishka.

On that subject: Does a radio station in your market use the slogan "Playing the best of the 80s, 90s and today"? "Mix-105" (now "Jammin-105") in New York had that slogan; when it switched formats WPLJ took it. Don't know if anybody there still has it, but WRMF in West Palm Beach uses it. (Speaking of WPB, anybody following the Jennifer Ross story? Why are broadcast markets in Florida doing no-compete contracts? There's no such thing in New York. If Howard quit "K-Rock," he'd be on WNEW-FM in a New York minute.

He's said that he will die in a gunbattle. Of course his wimpy little
revolver will be blown away by overwhelming firepower, and what's left
of Stevie will crawl to the radio and spew the same junk just before an
FBI agent puts him out of our misery. I think that they should put his
head in a formaldehyde filled jar and put it on display, like they did
to bandits in the Old West.

Avoid this stuff like the plague. A very common kitchen appliance
is VERY noisy on this frequency (left as an exercise to figure
out which one). I had one of those and couldn't send audio
and video 10 feet without it "Totally" being trashed when anyone
within half a block started nuking their popcorn.

Clue: it's the appliance made famous in Dire Straits "Money for
Nothing".

Organization: Airwaves Digest http://www.airwaves.com
Newsgroups: rec.radio.broadcasting

We're looking for STLs for LPFM stations. Trying to avoid going the
licensed route (for the STLs, that is!) There is plenty of unlicensed
wireless 2.4 GHz hardware out there. Anyone used this for audio purposes?
Much of this equipment is intended for wireless ethernet, but are there
some Part 15-certified links for audio? Link distance needed 1-5 miles.

2586. NOAA Weather Radio on AM Broadcast?

Newsgroup: rec.radio.broadcasting
Date: 2001-07-11 23:55:32 UTC
From: James Rubin <jimrubin@mindspring.com>
Message-ID: <tkpprkcbr2p0a8@corp.supernews.com>
Source record: 13897

Greetings,

Today (Tuesday, July 10th) I was returning to NYC from vacationing in Cape Cod, and decided to tune around on my Walkman on the expanded AM band to see what came up. I was surprised to hear the familiar sound of NOAA Weather Radio on 1640kHz! This was at about 4pm, whilst on the Deegan Expressway in the Bronx, heading into Manhattan. I was thinking maybe the Sony Walkman was picking up some wierd harmonic, so when I got home (Queens, NY) I tuned every radio I have to 1640kHz, and 'sho 'nuff, there it still was! It is still there, at 1:00am Wed. morning.
Has anyone else in the area (or in other areas) heard this? Previously I was able to get "Radio Cadillac" on the same frequency, which was a low power advertisement for the Cadillac Escalade (I never did find out the location of that xmtr, though it had to be close!).
Anyway, if you come accross any info on NOAA on AM, let us know. I did email one of the technicians at the NYC NOAA site, so if I find out anyting, I'll post it here.

Cheers,

James Rubin
AR-8000, RS DX-398 & various and sundry scanners...

Check out the Glenare Lynx equipment, it will do the 1-5 mile shot
with ease and they are availabe on 2.4 or 5.8 Ghz.

> are new faces or voices but still the same old whore.

Actually, there is no stranglehold by advertising agencies on the media. Operators of radio stations are free to program whatever they want. However, if they intend to sell much advertising, they have to be sensitive to the needs of advertisers. The advertising agencies, few of which are located on Madison Avenue any more, represent companies that advertise as agents. As such, they comply with the marketing goals of their clients.

Most large advertisers, whether local or national, have specific targets in mind for every product they produce and every service they provide. Generally, when they promote the product, they target the consumer the product was designed for. In most cases, products are not designed for over-55 consumers. The reason is simple; older consumers have much more entrenched purchasing patterns and are very hard to influence. A cost analysis generally shows that advertising is not cost effective in this group. Additionally, most people are retired somewhere in their 60's and living on either limited incomes or tight budgets. These 65+ people are even less likely to change toothpaste brands or try a different breakfast cereal.

Obviously, there are products designed for older people, but there are more efficient ad media for the message delivery, ranging from the AARP magazine (one of America's largest) to other print vehicles. The mass media is far less likely to include the medium of choice for advertisers targeting retirees. And anyone targeting upscale older people (a very small percentage of the population) generally uses a better targeted less wasteful media choice, too.

IMHO the idea of digital broadcasting on AM and FM radio is not going to be a good thing. As things stand now, most localities get some picket fencing while driving around listening to FM stations.. with a digital transmission format, these will translate into dropouts, or worse, stutters, in the received signal, just as you get when driving and using your cell phone. Another consideration is fringe area reception of digital signals even in a fixed location. With an analog signal, you just get a slightly higher S/N ratio... with the digital signal, you just get..... NO SIGNAL. This is also a big problem with digital television.... who has not seen digital degradation while watching CNN or HBO via their cable system? You know, where the picture degrades into nothing but blocks of various sizes as the receiver's buffer runs out? I for one prefer the occasional snowy channel to not having it viewable at all... I'm not against progress, but is this it??

You know, even Art Bell on his talk show says how digital (PCS) cell phones sound terrible compared to analog equivalents.

With digital radio, I can't imagine the results being much better that what one suffers with a digital cell phone today. I am still of the small school of people that believe that radio in it's current form will have to die (digital or analog), and probably be replaced by satellite delivery and networked audio using cell phone style networks to deliver programming to listeners.

As it is now, radio audiences are continuing to decline, not increase.

Probably a traveler / traffic information system low power station that had no immediate traffic warnings to present. Rockland County, NY local governament also transmits on that freq during "emergencies". Ever since WRKL AM went to a Polish Only format and does not transmit in English that left Rockland with less to be desired AM coverage during emergencies (like Indian Point Nuke stuff).

Orange County has only one real local AM outlet left, WTBQ in Warwick. All the others are STL or remote link to Poughkeepsie. Heaven help us if something really hits the fan and the word has to get out. Must not disturb the STL broadcast, can't interrupt the soaps on TV.. Gee whats those flood waters heading towars me.....?

I have to admit, I'm with you on this. IMHO, IBOC is the answer to a question the general public has never asked.

I've never heard anybody complain about the quality of the signal from a regular analog FM broadcast. I've heard plenty of people complain about what the program contrent was, but never the medium which brought the bad programming to them.

Beter audio quality is not the real problem. Better programming is the real question.

To be fair, there are some excellent stations out there, some of them owned by the "big guys." Unfortunately, especially in the hinterlands, there are many more mediocre stations than ever before.

IBOC is not going to fix that.

Chuck

2599. Cleveland update

Newsgroup: rec.radio.broadcasting
Date: 2001-07-12 23:33:59 UTC
From: sjsobol@NorthShoreTechnologies.net
Message-ID: <tkscv7cv6bn669@corp.supernews.com>
Source record: 13960

At the last minute, Painesville news/talker 1460 WBKC was recruited to broadcast much of WCLV/104.9's weekday programming. The transition from classical music to ballgames will be rather amusing, as WBKC is also the Cleveland Indians' Lake County affiliate and I don't know of any classical stations that also broadcast sports. :)

With 104.9's signal sitting way out on the western edge of the metro, WCLV had no presence in Lake County. WBKC will give them a presence, but folks, I have to say that I think that while Salem and Clear Channel made out like bandits, Radio Seaway ended up worse off than they were before the swap. On the other hand, I'm not sure how much of an audience they have in the outlying counties.

Clear Channel's CHR, 96.5 Kiss FM, has had a bit of a bumpy ride. Ameritech may still be working on their phone lines. They were advising people to use their tollfree number or their old request line number (216 578-1049)... Not sure whether 578-9650 is up yet.

96.5 is still ID'ing itself as WKDD. The Kiss call letters (WAKS) went temporarily to 98.1, which actually is running WKDD's format with WKDD's personnel, broadcasting out of WKDD's West Akron studio. I assume the reason that 96.5 didn't change callsigns is to minimize what probably ended up being a lot of paperwork.

So, at least temporarily, Kiss 96.5's legal ID goes: "In case you were wondering, WKDD Akron has moved. The new number is 98.1."

98.1 is currently burying its actual ID between commercials at the top of the hour. ("WAKS, Canton, Akron.") Then, as they come out of commercials - at the point at which they've done the legal ID for many years - it's "98.1, WKDD. Canton, Kent, Ravenna and Akron." I assume that that will become the legal ID as soon as 98.1 and 96.5 swap callsigns.

95.5 and 104.9 experienced some issues on the morning of the swap, but both seem to be up and running OK.

Wait a minute !!...Don't you see that doing what you suggest is totally
against the American way?? At least what it is supposed/used to be.

This is a guy just using the 1st amendment. Or is it?
Because he is violation of a 'regulation', why does that me he should die?

Does he not have his day in court? Can he not express his thoughts? What
has happened to this country?

Stop and look back...Just exactly WHAT HAS HE DONE TO WARRENT THE ATF,FBI,
BATF or whatever to come in , shoot him, and END his broadcast?

Excuse me.....Let us please remember the Constitution and the Bill of
RIghts.

Perhaps we should call on Janet Reno, eh? I'm sure she has a 'plan' to end
this terrible transmission.

Get a grip.

Dan/W4NTI

Most of us in radio, hamming,. etc dont like pirates
but only a maniac could advocate more punishment for a
pirate broadcaster than perhaps a fine and seizure of
his equipment and even that only after a polite cease
and desist.

Didn't WGMS in DC carry the Redskins games at one point (along with WTEM)?

- Classical WRR(FM) here in Dallas carries the city council meetings. They sometimes resemble a sporting event. :-)

I have to laugh everytime I hear a Sprint PCS commerical claiming how
clear the reception is. It ain't! I'm a Sprint PCS customer and
constantly put up with the cutting out and chattering of the signal. At
least with an analog signal, you can sometimes pick the words out
through the noise.

The city of New Smyrna Beach, Florida has a TIS service on 1640 kHz, broadcasting information about beach services. They occasionally run NOAA weather as well.

Source record: 13966

Radio audiences are declining because of the media competion for the listener's attention PLUS the poor programming. Surely bad programming is more a factor than audio quality. Even some AM stations with good progrmming do well against FMs.

What do I know? Well I was CE for a NYC AM!

Some years ago 570 AM Bethesda, MD, won the Washington, DC, rights to the Washington Redskins. All went well until the season arrived. Then their poor coverage over DC and eastern / southern suburbs became obvious, especially at night. At the time, WGMS 103.5 classical, was co-owned. The football games were duplicated on 103.5 to keep the fans and team owner placated. 570 lost the rights the next time around. 103.5 has been bought by Bonneville and remains classical, but mostly very short musical segments.

Somebody can correct me, but I'd guess that the games are now on 980, a legacy AM station which is now 50 kW days and 5 kW nights.

I finally found the old KDAN station, or what is left of it. The location is 1645 Military Rd., on the border of Newport and Woodbury. The old dirt road is still there..However, its now a private road with houses halfway down the road. I'm checking with locals about who owns the land behind the homes. I'd love to get a picture of someone standing on one of the three concrete tower bases, if they are still there.
If you look on some of the old Topo Maps, the maps show the road, three towers, and the house that was used for station operation. Hey, I just had a thought..I wonder if the old KDAN Station House is still back there in the field behind the new homes..Hmmm :)

STAGE LEFT is a weekly theatre and film music Internet radio show produced by KDHX-FM in St. Louis, MO, USA.

The latest edition of the STAGE LEFT webcast went on line yesterday (July 11). Listen to it any time with RealPlayer at http://www.stageleft.org or http://www.kdhx.org/listen.htm Send me a note with your comments at chuck@stageleft.org

This week we're playing music from summer movie soundtracks: "Jurassic Park III" (Don Davis), "Final Fantasy: The Spirits Within" (Eliot Goldenthal), "Bride of the Wind" (Stephen Endelman, with lots of help from Gustav Mahler) and "A.I. Artificial Intelligence" (John Williams). You can get both the current episode of STAGE LEFT and the last four shows at http://www.stageleft.org or http://www.kdhx.org/listen.htm. This week's play list is at http://www.stageleft.org/010711.html

Next Week (7/18): "Happy Birthdays" - A very silly show celebrating the birthdays of Albert Brooks and Peter ("P.D.Q. Bach") Schickele.

WCBN WILL DESTROY YOUR FEEBLE FORMATS

WCBN - Over 25 Years of Freeing Your Mind - Listen to us online!

WCBN is the University of Michigan student-run community freeform radio station in Ann Arbor, Michigan. We broadcast at 200 watts to the University and its surrounding communities from the basement of the Student Activities Building in downtown treetown. We have been broadcasting a genre-less overview of music, news, and public affairs for over 25 years.

WCBN's musical format is freeform, with some specialty shows. Freeform involves all different kinds of music, including jazz, reggae, blues, hip-hop, country, rock, and just about everything else under the sun. Instead of telling our DJs what to play, we allow them to select their own recordings from our vast and unique library. It is their responsibility to mix together many different kinds of music in an intelligent fashion, and show links between musical genres.

Click here to listen to our live WCBN-FM Ann Arbor broadcast!

Source record: 13972

James Rubin <jimrubin@mindspring.com> wrote:

"Today (Tuesday, July 10th) I was returning to NYC from vacationing in Cape Cod, and decided to tune around on my Walkman on the expanded AM band to see what came up. I was surprised to hear the familiar sound of NOAA Weather Radio on 1640kHz! This was at about 4pm, whilst on the Deegan Expressway in the Bronx, heading into Manhattan. I was thinking maybe the Sony Walkman was picking up some wierd harmonic, so when I got home (Queens, NY) I tuned every radio I have to 1640kHz, and 'sho 'nuff, there it still was!"

In addition to the TIS stations others have mentioned, some states have weather receivers connected to Part 15 (unlicensed) AM transmitters in highway rest areas, so motorists can check the weather when they stop using only a normal car radio. Some of these rest stops also have telephone handsets inside the building that also carry NOAA audio (I guess in case you don't have a car radio).

"Previously I was able to get "Radio Cadillac" on the same frequency, which was a low power advertisement for the Cadillac Escalade (I never did find out the location of that xmtr, though it had to be close!)."

Those were placed on billboards along major expressways -- not necessarily billboards carrying Cadillac ads (AFAIK the ad was placed on a billboard away from the one with the transmitter, so when you tuned in you would be approaching the transmitter rather than going away from it).

Yes - heard that about the picket fence thing. What about bandwidth? the usual analog is around 400khz? .2 mhz each side. I read many many many years ago taht digital would take up 50-times more. With compression today I doubt this, but still do you know the bandwidth on both AM and FM. I see a use to AM, but FM is "good enough" now - if people would use a Proton/NAD/Yamaha/Denon tuner and NOT Sparkomatic/kraig/SONY/and other walmart ware. Any minu(T)ia about the digital stuff we should know ;-).

Seeing how fast HDTV is moving - I'd say your analog reciever is good for another 20-years (seriously). I see "air-based" radio is deadend with the "net" anyway --- digital may never get off the ground. The internet is fastly becomeing a commodity. The current system is not viable when compared to the net - just as M$ windows WRT opensource software (the product of the net). The internet was never about the "dot.com" B.S. - It real impact will be first Linux(opensource software really - Linux (and BSD) by extension) killing windows, then net killing FM, then net killing terrestrial TV. Were talking these next 20-years here. No flames please - just being a Geek-Guru here.

Here in Orlando, NOAA weather radio is also broadcast on 1640 kHz. It originates from a low-power transmitter located at the intersection of Interstate 4 and the Florida Turnpike. The station is billed as "Highway Information Services."
Previously, another LP signal was on 1640 kHz in the same area. It was a repeating loop for Marriott Vacation Villas.

Not to split hairs - but 32-bit (even 64 if original is clean) is better. Each show will be around 7-9 megs per half hour. I collect OTR - and play it to others as you know ;-). Larry, you need a CD-RW (an absolute!!) and a good CD-burning (CD-recording) program - Nero (alot better than Adaptec). Best of luck ------- Hey guy when you get them saved in digital form - please upload them to the alt.binaries.mp3.radio.oldtime group!!!!!!!!!!!!!! - I'll be there to download - and then share with my neighbors via LPFM ;-). Good luck

Yes that transmitter is in La Porte and is supposed to cover La Porte,
Morgan's Pointe, and Shoreacres.. but covers alot more.

I recall getting Houston Wx radio on 1610 on the northwest Houston side..
Can't get it here because it's 1610 Webster Information here in Clear Lake.

Hey Steve,
As a matter of fact, I discovered today that it WAS in fact the NYS Dept. of Transportation! I turned on the radio and there was a continous loop message on 1640kHz (WPLT248 is the callsign). Mystery solved, and thanks for the response. Now what I'm wondering is; how do they get the weather broadcast on these remotes? Are they beamed, or are these remote units attached via telco, or what? Interestingly, this callsign covers half a dozen transmitters all along the area mentioned (Deegan, Cross Bronx Expressway, etc) they put out ten watts. I can kinda sorta get another remote xmtr at 550kHz, but I'm having a hard time making out the call letters. Anyway, thanks again. By the way, didn't you used to have a BBS called The Red Onion Express? Your name seems familiar!

Later, Jim

God, I couldn't agree more!!!!!!!!!!!!! Makes my heart glad to see someone in this group see the imortant trouble with radio - stuff on it - not the fidelity. I listen to 2-stations now (I recieve 30?). One is boring/pretentious NPR - only for the news. Mrs Gross/Ream are TOO MUCH. Ira is cool - thats about it ;-(. The other station is classical and they are great!!! and play the "celitic currents" and "hearts of space" --- finding this type of station is now almost impossible! - and they are never commercial. I used to love radio, but it's just now any good anymore - today I only catch 5-minutes of news and listen maybe 2-hours on weekends for the two shows above... I love rock - but only teen-crap-R&B crap or fossil rock crap is around now - so only play (and-replay) my CD's. LPFM all the way ;-).

You are probably listening to a TIS station that uses an ALERT AM
transmitter from the ISS Corporation. You can read about it at
http://wwwtheradiosource.com/products_tis.htm

The ALERT AM unit is a self-contained 10 watt TIS transmitter with a NOAA
weather radio feeding directly to the AM transmitter audio. According to
sales literature, the device can also be programmed for traditional recorded
voice messages. An emergency interrupt feature is included that switches
everything back to NOAA if an alert is received.

Hope this helps.

Yes radio is more likely to fall on its face over bad programkming than because of bad audio. How else would AM stations be the number one ranked in their market against FMs except because of damn good programming?

Now some of the FMs are getting smug and think they can't fail because they are FM. Guess again, Sherlock!

I am former CE for a NYC AM among others.

Hello Broadcaster,

IkonSoft is looking for beta testers of their new WEB BASED Music Scheduling System.

This software will do everything the major leased Schedulers will do plus you don't have to be married to your desk at work. You can access IkonSoft from any browser.

No Need to even print out the Playlist. Just put a browser in the on-air studio.

Outputs to all Digital system.

Even Merges your Traffic for one neat Program Log.

Sign up for the beta program now. They will be handing out user accounts starting 7/23/01.

Technologies implemented in IBOC will work to prevent this problem. The cover story of the July 2001 IEEE Spectrum Magazine is on digital radio: mostly the satellite radio about to be launched (SDARS) but also some information about terrestrial digital radio, or IBOC.

Specifically, a blend-to-analog technique will seamlessly transition the audio heard from digital to analog... resolving the cliff-effect failure of digital systems when the SNR drops below the critical level.

What about the second generation, when the analog signal is removed completely? Its removal will make space for additional digital signal bandwidth, allowing a more robust digital signal.

You can read the article at http://www.spectrum.ieee.org/

Regards,
Tony

>>
Some years ago 570 AM Bethesda, MD, won the Washington, DC, rights to
the Washington Redskins.
>>

WGMS was, I believe, then a Metromedia station, and certainly had the
(menetary) "juice" to get the Redskins contract, but not the (signal strangth)
"juice" to support the actual Redskins programming.

5 kW days, 1 kW nights, DA-2, built back when a 1 kW signal was actually pretty
decent.

Now, 50 kW is needed just to overcome all the mad-made noise produced by the
millions of PCs in a metro.

Even WTOP cannot cover D.C. adequately with its Class A facility.

OK folks, I don't typically get involved in flamewars, but this is going to stop. Any further discussions on this topic will be deleted. and will not make it to the newsgroup.

If you want to post to the other groups, great, but don't include rec.radio.broadcasting. Including rrb means I'll get the message before it gets posted, which, in this case, means it won't show up in rrb or any of the x-posted groups. The solution is just to leave rrb out of the Newsgroups header.

This is actually not as inflammatory as a couple of the messages I haven't posted, but this thread is over. Done. Kaput. Through. 86'd... at least as far as rrb is concerned. I don't care about, nor do I have control over, what is posted to the other groups.

Per RRB's original moderator's rules: just about anything posted here is OK as long as it's on-topic and flame-free. Keep the flames out of RRB.

Thank you, drive through. (Any followups to this post will be ignored. Any flames that are e-mailed will be deleted without comment.)

Virus alert and an apology

Many of you may have received strange, cryptic messages from me late last month. These messages were not sent by me consciously, but were the result of my computer being infected with the W32.Magistr.24876@mm virus/worm. This worm was apparently created back in March by a demented Swede with an obsession for judges and courtrooms (probably because he has seen so many as a result of his flagrant violations of the law). One of its functions is to grab bits of old txt and .doc files on your hard drive and email them to everyone in your Outlook Address Book, which I was using temporarily. It's through this automatic email transmission that other computers get infected. In my case, though, it was also mailing to people I never added to an address book - people who only received a message from me at one time or another.

If you did receive an odd message from me last month, it's important that you run a good up-to-date antivirus program to identify, clean, or remove any infected files (particularly .exe's). I'm also told it's important to remove the bad files within a month after the worm first infects your PC. The reason I was infected in the first place is related to the fact that my computer began life with a mere 150 mHz CPU. The antivirus program I was running slowed it down a great deal and it never found any viruses. So, I trashed it but never got around to replacing it after an upgrade. I guess I learned my lesson!

Radio Stuff

A bit more than a week ago, I was contacted by Michael Cheneult, host of "Almost Folk" on a small college station in Richmond, VA. He's very fond of my "WADN Restoration Project." Like me, he thinks that the whole folk/Americana/new age/world music thing should be on commercial radio (most likely small, independent AM stations). We should be selling it to advertisers

and earning a decent living from it, while presenting it in a way that is thorough, systematic, and palatable to the average American. He even thinks that a larger company would be willing to invest the seed money to start such a network of small, individually owned stations.

Of course, this is what I've been advocating for over a dozen years now. And recently, with so many hosts of longstanding public and college radio shows finding themselves canceled, I think it's high time we questioned the wisdom of putting all of our eggs in the public/college radio basket. After all, which is better for everyone? Hosting a weekly show on a non-commercial station, or taking what you've learned into OWNERSHIP of a small commercial AM?

As for me, I'm quite busy with my own efforts. But any current or former host who is now rethinking his or her long term goals, perhaps station ownership is something you should dare to consider. Michael and I are open to your input. I can be reached at the above address and Michael can be reached at mgcheneult@vcu.org. We are unabashed capitalists... and we think EVERYONE should be! :)

Well that's all for now. The outdoor festival season is here and I hope you all enjoy it as much as I am planning to. Have a great time.

-Jeff

Looking to get into webcasting? streaming? The New York City Internet Broadcasting Industry.

We are interested in selling our 5 year-old streaming company GRIT.Net centrally located in Silicon Alley New York, NY

GRIT, one of the first broadcasting sites on the web, has the distinction of being the first Internet Content in the Museum of Television of Radio, Named Broadcasting Pioneers by Radio World Magazine reviewed in the New York Times and Economist and has an array of clients, customers and leads.

An acquisition would give your company these distinctions, press coverage and
revenue.

In addition the company comes with approximately $75,000 in audio equipment and computers in a T-1 networked office perfect for expansion into the New York City area.

Plus Placement on over 25 boards as a webcasting / streaming company with
leads every day for

** streaming production,
** hosting services
** propagation services
** consulting,
** content proposals and
** invitations to speak at conferences.

Price available upon request.

Principals only

Rob Gould
President GRIT

Rush Limbaugh just signed a record setting $250 million radio contract that dwarfs almost every showbiz contract in existence. Limbaugh has stood the test of time. After 13 years at the top, he has silenced his critics who thought that he was just part of some passing conservative talkradio fad. His detractors are gonna feel like shit now that they are forced to admit he is the top man in the broadcasting business and he will stay there way into the foreseeable future. Limbaugh has now set the standard of success they all have to work to achieve.

http://www.topradio.com/radio6.htm has a list of radio stations that
carry
Howard Stern. Elsewhere at that site you can get the web addresses of
those
stations, and most let you listen over the Internet.

www.metacaster.com will then let you set up a program which will
automatically
interrupt your regular Internet audio, and go to that radio station's
web site
and start listening just when Howard is on the air.

Mitchell Shnier
MetaCaster.com

> (Does this mean I'm going to have to buy a new car? ;-)
>

No.

When actually in place, in the real world, IBOC will not work well
enough to replace anything. The power levels they propose are far too
low.

I am member of one of the proposals (PLM) to improve the
US digital TV system. This system is unrelated to the system
used in IBOC ... and requires about three dB less power than COFDM,
used in IBOC. And the proposed powers ... 10-15 dB less than analog
TV .... simply do not work.

Basically speaking, to RELIABLY replace FM, the digital system
will need the same power in the same bandwidth. It may perhaps
even need MORE power if you allow use of only the mono part of FM.

So the answer is, FM will not go away.

Doug McDonald

I remember reports of people hearing daytime skywave on WTOP (1500) in downtown DC back in the low sunspot years around 1950.

That high in the band 50 kW doesn't do as well as 5 kW at the low end. Thus the "WTOP Network" of 1500, 107.7 rimshot to the south, and 820 in Frederick in 'TOP's null toward KSTP.

2641. RADIO COMMERCIALS FROM THE 50S

Newsgroup: rec.radio.broadcasting

I'm looking for any tapes or cds of RADIO COMMERCIALS FROM THE 50s and
does anyone know of a company called CUMMINGS PRODUCTIONS from NY? I
have a demo LP from the 50s where they perform their 'hits'.
Does anyone have any info on this company or know where i can get
similar material?
thank you

> What is the correct info?

The FCC files that I downloaded on June 8, 2001, have 5 entries for this station WSNR:

Licensed: 5 kW day and night 5 towers for each, COL Newark, NJ. Day and night patterns very similar with very little outside the main lobe, which is to the east southeast. Both records dated 10 Oct 1997

CP: from a site about 15 miles east of the above site. COL Jersey City. 7.6 kW nights with 5 towers , again very little out of the main lobe, which is to the SE, Application date 10 July 1995, record dated Jun 9 1998. There is also a 3 kW day operation from this new site with a pattern similar to night, and a note: "Interim facility, licensee does not wont to license this facility." Application 10 July 1995, record dated Aug 7, 2000

Application: from a site somewhere between the other two for 20 kW NIGHTs with 9 towers, again beamed to the SE with little in other directions. COL Newark, NJ, Application May 21, 1999, file dated Aug 7, 2000.

Are you as confused as I am?

2643. Re: Dub audio to computer

Newsgroup: rec.radio.broadcasting
Date: 2001-07-18 20:37:20 UTC
From: SnittyKitty <SnittyKitty@operamail.com>
Message-ID: <tlbss0ms1m7m72@corp.supernews.com>
Source record: 13804

A rock solid CD-Writer like Plextor or TDK or Creative...with Burn-Proof Technology...an absolute must...start with CNET at www.cnet.com one of the best computer sites on the net, another is www.techtv.com if you have satellite or expanded digital cable, you might have heard of these folks...terrific web site; another is www.maximumpc.com a terrific magazine and website...search their writers...you'll find Plextor at the top of all of them...TDK and Creative's on many other's depending on the price range you're looking at.

Audio Editing... this is up for grabs... I use AudioGrabber, and the Windows Media Encoder 8 which by itself you can rip MP3 in DOS or you can get it's graphical big brother Windows Media Player v7.1 which includes the encoder. Cool Edit 2000, Music Match...there's a zillion programs out there...it's up to you as for your taste...I like AudioGrabber, the freeware version will let you record half the tracks, if you turn it off (X out of it) and restart it...it will give you a different half set...so I use it, not the registered version. Works for me!

As for your audio tapes...you must have a sound card that has a "line-in" jack in the back...not "mic in"...though it will more than likely have it too. The card usually has three jacks...those two and "line out" which your computer speakers plug into...

This is what I recommend...this is my setup... The CD-ROM on your computer is just another CD-Player...treat it as such....Take a trip to Radio Shack and buy two 6' or 8' or 16' mini-stereo cords with mini-stereo plugs on their ends...the size of the cords depends on where your stereo is relative to your computer...If you intend to pipe your computer CD-ROM to your stereo's amp...you'll need the second cord, otherwise you can make do with one as long as you're depending on your computer to hear the music. Personally, I have two, one for line in, the other for line out...

1) Plug one cord into "line-in" and plug the opposite in of this cord, using (again from Radio Shack) a "Y-cord" that will separate the two channels to L/R into your amp...the Y cord will have two male "stereo" plug-ins and one mini-stereo plug-in (hole). If this cord isn't available, take an adapter that will convert the one mini-stereo plug into two channels; left and right and use whatever cord is for your amp setup. Do the same thing for "line-out" if you want to hear your MP3's on your stereo and big speakers.

2) Once done...open your control panel for your sound card, usually in your system tray or in program files...each computer is different...most Audio programs like AudioGrabber will let you open it from it's program options. Depending on how much ram you have, you need to turn off everything on the card except Line-in Sampling, Volume, and Record... once you record the

program...make sure your sound card is adjusted so you can hear whatever format you recorded your tapes in.

3) At first, this may sound nightmarish...just tinker with it until you get it...

I have Dish Network and I tape the DishCD music straight to the computer or any program for that matter that comes right off my stereo system...since Dish is setup to be heard via my CD port on my amp-receiver, thus my VCR is hooked up the same way...my computer in essence is one more channel on my big stereo...if I need to use the CD-ROM, I change the wire configuration on my Equalizer, and add it to the system.

Hope this helps...

Source record: 13805

What an Evil situation, both Rush personally and the state of radio. Arrogant, pompous, "talent on loan from God..." Frightening leader of right-wing "dittoheads" who take their marching orders from right-wing "think tanks." Rush once answered a letter on-air as to why there are never any callers with opposing viewpoints. His answer was that he had a well trained call screener who only let people on the air who would make him look good, if you want the "femi-nazi" viewpoint on the air, buy your own station, etc.

So much for the airwaves belonging to the people!

2645. Re: airwaves-digest V2000 #468

Newsgroup: rec.radio.broadcasting

Source record: 13806

Its rumored that although Rush received a $35 million signing bonus a chunk of the rest of the contract is tied into ad revenues that he brings into Premiere/Clear Channel. Given the "challenge" that most broadcasters are having at present with sales and over all revenues it is slightly more than possible that in the end this contract won't be worth the stated amount. Possibly a great deal less.

Just curious-- did Park have the DJ's "working" seven days a week at WNCT the way they did at WPAT? What I mean, of course, is that the station was semi-automated and they recorded their weekend song recaps ahead of time. So it seemed that Ken MacKenzie and Ken Lamb were toiling on Saturday and Sunday too, but a separate news reader gave the news and weather on weekends (whereas MacKenzie and Lamb could read the weather during the week, because they really were there).

>A little off topic, but what happened to your beat radio program? Are
>you on the air now? I used to enjoy listening on the weekends once in a
>while.

Thanks. Where are you located?

The Beat Radio dance/club music format lays in wait for our next opportunity on the air. After the national exposure on the former Children's Radio Corp. stations (Radio Aahs) in 1998 as the "Beat Radio Network" 12 hours every night, we took up an offer from KVSC up I-94 in St. Cloud to get the music back on the air, in show form. We discontinued that and our last show was in December '99. We did a one-off on KSMM in Shakopee, MN a year ago this month as the station approached a sale and format change. And that's the latest. The KVSC and KSMM shows are available on the Beat Radio web site: http://www.beatworld.com. We also regularly archive our "beatopia" at First Avenue in downtown Minneapolis every Friday night. That's five hours of house music and we've been doing that almost three years! Beat Radio itself is five years old this week.

Don't get too excited. I hear it's automated. Haven't checked it out yet.
Anyhow, WWKB is an Entercom tax writeoff. There's nothing constructive that
they can do with it. If they put ratings getting programming on it then it will
draw listeners from their other Buffalo stations. If they were to sell it then
the new owners might just do that. So they just keep the 50KW transmitter
modulated and drawing power from the Buffalo electric utility co. What a waste
of a station that was phenominal back in the 60s & 70s.

All business expense is a "tax writeoff." There is no advantage in losing
money within a cluster on one station, either from the business or the tax
point of view.

>There's nothing constructive that
> they can do with it. If they put ratings getting programming on it then it

So? The objective of a cluster is to consolidate or combine ratings of
individual stations to get a greater share of market revenues.

Ah, the "good old days" argument. Hasn't been heard here in several weeks.
You mean the pre-FM days when an AM music station could target any demo and
get ratings? You mean when markets like Buffalo or Cleveland had less than
10 competitive stations, not 25 or 30 like they do now?

no we had a chart with numbers indicating when to play which reel... it was faxed from WPAT every
week. Updated reels with cue sheets were shipped from WPAT once a month or so.

actually the reel chart wasn't much use at WNCT... when it came time to set the automation clocks
back for daylight savings time I accidentally erased the automation system's format memory. In
other words it was as blank as the day it came out of the box and 100kw was sitting there silent..
I started slamming in reel-assignment numbers as fast as I could and got the station back running
in an hour or so, but they never could figure out how to reconcile the new playback order with the
reel chart after that.

Rush Limbaugh deserves every penny of the contract he just signed. (even though the IRS will get about half of it)

It is not a stretch to say his show has saved many AM radio stations.

Obviously the public likes Rush or he wouldn't have the kind of huge ratings have have led to this kind of deal.

This sounds like the old Livingston site. The current tx is located
in the Valley Brook Road tower farm in the Meadowlands, between WINS
and WLIB, and (I'm told) replicates exactly what they had at
Livingston, with five towers not quite in a line. The Livingston
facility was lost to development several years ago, and it's possible
that the station is operating under STA, since everyone I've talked to
says that they can't put a legal signal over Newark using that pattern
from the Meadowlands.

The other records I've seen in the database would put their facility
further east, to the south and east of the WOR towers at the end of
Valley Brook. It's difficult to imagine why they would want to do
that, given the money they must have spent putting steel in the air
just half a mile away.

And the difference from most other talk shows is what?

Regardless of what you may think of Rush Limbaugh, he has a right to
broadcast his admittedly pompous pronouncements.

Like you, I'm amazed and befuddled by his popularity. However, there
is no basis for denying him access to the "people's" airwaves. Save
your disdain for another forum.

Source record: 13821

What are the hours of WWKB's new music format? When I tune in after midnight (really the only chance I get for AM DXing), I hear them running their "Business Talk Radio" format as usual.

Also, does anybody know if WWKB has switched their AM Stereo back on during the music programming? That would certainly help to make it sound better. I know WWKB is still in mono during their overnight talk programming but they might only be broadcasting in Stereo during the music, which I haven't heard yet (probably wrong listening time).

2661. New STAGE LEFT episode on line: "Happy Birthdays"

Newsgroup: rec.radio.broadcasting
Date: 2001-07-21 02:23:44 UTC
From: thedoge@pobox.com
Message-ID: <tlhptgn5v8vq58@corp.supernews.com>
Source record: 13822
Cross-posted to: rec.arts.theatre.musicals,rec.radio.broadcasting,rec.radio.noncomm,stl.general

The latest edition of the STAGE LEFT webcast went on line today (July 18). You can listen to it any time with RealPlayer at http://www.stageleft.org or http://www.kdhx.org/listen.htm Please send me a note with your comments at chuck@stageleft.org

This week we're celebrating the birthdays of to very funny and very bright guys: comic, writer, actor and film maker Albert Brooks (July 22nd, 1947) and composer and musical satirist Peter Schickele (July 17th, 1935). We have cuts from Brooks' only two LPs, now long out of print, "Comedy Minus One" and "A Star is Bought" and the (ahem) "music" of Schickele's "discovery", P.D.Q. Bach.

You can get both the current episode of STAGE LEFT and the last four shows at http://www.stageleft.org or http://www.kdhx.org/listen.htm. This week's play list is at http://www.stageleft.org/010718.html

Next Week (7/25): "You're No Good" - A celebration of villainy on the musical stage, from opera the musical comedy.

2662. Re: NOAA Weather Radio on AM Broadcast? -Could be TIS

Newsgroup: rec.radio.broadcasting
Date: 2001-07-21 02:23:46 UTC
From: "RoXert G. Schaffrath" <rschaffrath@hotmail.com>
Message-ID: <tlhpti22v00u59@corp.supernews.com>
Source record: 13823

The New York State Thruway TIS on 530 KHz used to broadcast the NWS
station as well during the early days when it first came online. They
obtained the signal over the air using a NOAA Weather Radio receiver. I
would not be surprised if the 1640 station is doing the same thing. The
KWO-35 signal is so strong on 162.55 in the NYC metropolitan area that
you would not need any special antenna's to pull the signal in.

2667. Cussing on the radio (WARNING: Mature Content in this post)

Newsgroup: rec.radio.broadcasting
Date: 2001-07-21 02:24:05 UTC
From: Joshua Carroll <kitcannon_1977@yahoo.com>
Message-ID: <tlhpu5gqa58f6d@corp.supernews.com>
Source record: 13829

How come, some stations can get away with either their personalities or music with cussing?
I've heard every cuss word except the big F and S words.

I thought it was context too:

You can prick your finger, but you can't finger your p---k.
You can say ass, but you can't add hole.
You can say Dick as in a name, but not the latter.
You can't say words like F-g, Ni--er, K--e, or whatever.

But I have heard these on some stations, but on other stations, they are either blipped out or deleted.
What is the rule on this? Is it a certain time? Is it station format? If there is a warning before the show, are the rules tossed out the window?

>>

All of these are heard regularly, in proper context, on many stations.

When the Clinton scandal was hot news, the term "blow job" was used perhaps 50 times per hour by one host, yet another host on that same station used the term "fellatio" with about the same frequency.

The term "ass hole" has been used repeatedly to refer to George The Elder and George The Lesser on that same station.

An African-American host on that same station occasionally uses the term "N*gger".

Just about every word except "F*ck" has been used on that same station, at various times and by various hosts, to refer to sexual intercourse, in the Gary Condit and William Clinton contexts.

Several hosts have let the word "F*ck", uttered by a caller, get through without the host using he "dump" button.

I don't think I need enumerate all of the very close synonyms for "F*ck" that were used, both by the hosts and the callers.

"Pr*ck", and all of the very close synonyms for that word were also used, both by the hosts and the callers, in the same context.

Let's start by stressing that I know nothing about walkie talkies or "family radios".
My wife and I would like to be able to keep tabs on each other when we're in the shopping mall or casino and wondering if the Motorola 2-Way T5100 that Wal-Mart sells would work inside a mall or casino. We don't want to spend more that about $60. Any information or suggestions would be greatly appreciated.

Agreed...I bought a few copies of "God's Other Son"; for an audio book it is one of the most UNbooklike recording I ever heard. A delight to hear. Classic "Theater of the mind" stuff. Had to buy more than one..I kept giving it away to friends with " You HAVE to listen to THIS!"

and yes, "Swear with Flair" was one of Imus/McCord's best.

Once at a remote, I asked Charles McCord if he wrote a lot of Imus' material, the stuff of " This Honky's nuts" "Yes.." he said," we both did" But ashamed, no. He just likes to move on ahead to the next funny thought.

Chuck's a fabulous comedy writer, imho, intelligent and hysterical.

This is certainly an interesting fight. I suspect that if Clear Channel walks away from the bargaining table, Arbitron will be forced to go back and give in to all of Clear Channel's demands.

2678. indieradio.org cd giveaway!

Newsgroup: rec.radio.broadcasting
Date: 2001-07-25 00:17:51 UTC
From: danny copacetic <dmcgra1@gl.umbc.edu>
Message-ID: <tls41f6koc0t18@corp.supernews.com>
Source record: 13839

hi all,

to celebrate the recent playlist implementation on www.indieradio.org, i've decided to conduct a contest. jeff who runs powerbunny 4x4 records, in cambridge ma, was kind enough to send me a bunch of cds to distribute amongst the listeners of indieradio.org.

==========

INDIERADIO.ORG CD GIVEAWAY CONTEST

participate in the indieradio.org cd giveaway! if you can identify the song's artist and title, from the lyrics supplied, you'll win a free cd. here's how to win. it's easy. using the dynamic playlist as a guide, the first ten people to correctly identify the song's artist and title from the lists below, win a cd.

dreampop radio (http://indieradio.org/contest/contest-dreampop.shtml)
poploser radio (http://indieradio.org/contest/contest-poploser.shtml)
women in indie (http://indieradio.org/contest/contest-womeninindie.shtml)

technically, you can win two cds. it's a compilation released by powerbunny 4x4 records (http://powerbunny.com), called kitra volume 3. jeff from powerbunny has done a fine job of putting together a two cd comp, packed with some good indie rock bands. in addition, he has generously donated ten kitra 3 comps for indieradio.org to give away to its listeners.

there are a few rules, though. one guess per email, one winner per mailing address, and you can only win once per contest. after the first ten correct guesses are received, i will announce it and contact the winners for their mailing addresses. soon afterwards, i will post the winners and correct answers on the web site. contact danny copacetic, if you would like to submit a guess. check out the web site for more details:

http://www.indieradio.org/contest

to find out how to use the playlist to view current song information, follow the link below:

http://indieradio.org/howtolisten/currentsong.shtml

if you would like to promote your cds by donating them to indieradio.org for cd giveaways, we're bound to find a good home for them. please contact danny copacetic for more information:

http://www.indieradio.org/contact

==========

to subscribe to the newsletter, simply send an email to
indieradio-subscribe@yahoogroups.com or visit
http://www.indieradio.org/newsletter. don't forget to check out
indieradio.org and listen often!
yours truly,

- dj danny copacetic (dmcgra1@gl.umbc.edu)

Bob,

You might start with an article in the July edition of IEEE Spectrum magazine. What you are referring to is IBOC (In-Band-On-Channel) transmission.

As you may be aware, the satellite-based DARS systems (XM Radio and Sirius) are set to start-up this coming quarter and many believe these systems will eventually compete for existing analog listeners.

Thus the urge to consider terrestial digital systems...

You need not be a member to review the article on-line, and many better bookstores carry the IEEE Spectrum publication.

Browse over to http://www.spectrum.ieee.org and take a peek.

Michael Millard

Source record: 13843

Hello,
I am looking for a small AM or FM radio station in the OHIO, KENTUCKY or INDIANA area. Actually, I'd be interested in talking to any small station owners in the USA who are interested in selling their station. I have several years of engineering, sales and on-air experience. I also have partners who will back me.
So, if you are silent or on the air, don't hesitate to email me. Let's talk.
Thanks,
Dan

I tend to fall on the side of the controversy that says that market fragmentation does work. Entercom has no good financial reason for putting crap on the air that people won't listen to, just for a tax write off? Remember reformulated Coca Cola? Those who thought it was crap didn't but it, those who liked it did buy it, and when "Classic Coke " was brought back as a separate product, those who liked it cheered and went out and bought it. Meanwhile Coca Cola had two products out there making use of the Coca Cola franchise, and all the money went to the same place--Coca Cola Company. Maybe not the best analogy, but you get my point..

WCBN WILL DESTROY YOUR FEEBLE FORMATS

WCBN - Over 25 Years of Freeing Your Mind - Listen to us online!

WCBN is the University of Michigan student-run community freeform radio station in Ann Arbor, Michigan. We broadcast at 200 watts to the University and its surrounding communities from the basement of the Student Activities Building in downtown treetown. We have been broadcasting a genre-less overview of music, news, and public affairs for over 25 years.

WCBN's musical format is freeform, with some specialty shows. Freeform involves all different kinds of music, including jazz, reggae, blues, hip-hop, country, rock, and just about everything else under the sun. Instead of telling our DJs what to play, we allow them to select their own recordings from our vast and unique library. It is their responsibility to mix together many different kinds of music in an intelligent fashion, and show links between musical genres.

Click here to listen to our live WCBN-FM Ann Arbor broadcast!

theres a binaries group also - I've gotton many from it other the years - it looks to be drying up recently though - hope it recovers! alt.binaries.sounds.tv-commercials Some ISP's dont carry this group. You need the Newsreader FreeAgent from www.forteinc.com?? (try google for URL). freeAgent links mulitple bineries automatically. Good luck!

Oh - ya - even though the groups says "tv-commercials" , many posts are radios ads from the 30's,40's and 50's. "Bud" used to post hundreds of old radio ads last year.

From: "Frank Provasek" <ropertex@ix.netcom.com>

> What an Evil situation, both Rush personally and the state of
> radio.

Why? An obviously hard working guy in radio....who is sucessful...and helped many stations stay viable makes a good paycheck?

I think it's great...well deserved...and I always like to see when management values talent enough to pay them.

I think this will trickle over to some of the other syndie shows...and maybe to some morning men, etc. I think anytime a station/syndicater decides to value the talent on air...and will go the step of paying them...it's a good thing! It's going in the right direction.

> Arrogant, pompous, "talent on loan from God..." Frightening
> leader of right-wing "dittoheads" who take their marching orders
> from right-wing "think tanks."

What a bunch on paranoia....

Listen to his show as entertainment. Conversation as a form of entertainment. That's the problem with people like you...you take it all mucyh too seriously. (Do you think anyone is robotic enough to take 'marching orders' from Rush or anyone else? The world is a much different place...and people (both left and right) don't march to anyone's drum.

> Rush once answered a letter on-air
> as to why there are never any callers with opposing viewpoints.
> His answer was that he had a well trained call screener who only
> let people on the air who would make him look good...

Laugh! That's a joke! (That obviously you don't get.)

And if you work in radio you know that the 'caller on the air' is alwasy to make the station/host/DJ look good.

Truth is, if you disagree with Rush....you go to the head of the line!

> if you want
> the "femi-nazi" viewpoint on the air, buy your own station, etc.

That's the way it works! (Or you could get a job on radio just like he did...make yourself a valuable radio comooditit and do what YOU want with your show.) Would Howard Stern let me on the air to disagree with him, his lifestyle, his opinions, etc?

> So much for the airwaves belonging to the people!

What? Like a road? Highway? Library? Can you demand that a highway change their speed limit because you don't agree with it?

Copies of this FAQ are distributed quarterly to rec.answers,
rec.radio.info, rec.radio.broadcasting, rec.antiques.radio+phono and
other news groups; and are on file at bloom-picayune.mit.edu in the
file: /pub/usenet-by-group/news.answers/radio/old-time-faq. A recent
text version can usually be found at
http://www.old-time.com/ffiles/otr.faq The most recent HTML-ized
version is at http://www.old-time.com/otrfaq.html

----------------------------------------------------------------------
Table of contents:

Q01. What is "OTR"?
Q02. You haven't mentioned OTR music, why not?
Q03. Where can I buy recordings of old radio shows?
Q04. Which vendors have (lower prices) (higher quality) (faster
response)?
Q05. Are OTR shows rebroadcast? If so, where and when?
Q06. I remember a great show called (x). When was it aired?
Q07. Are there any books about OTR?
Q08. Does anybody trade tapes of OTR shows?
Q09. What's this stuff about Copyright?
Q10. How can I get my local radio or TV station to broadcast OTR
programming?
Q11. I have some old transcriptions and tapes, how can I make them
sound better?
Q12. Are there any OTR clubs near me?
Q13. I have some OTR tapes of the same program, but their dates are
different. Why?
Q14. Is there anywhere I can get a complete listing of all the
episodes in a serial?
Q15. Is there anywhere I can get a written synopsis of the plots or
themes of OTR programs?
Q16. Is there a World Wide Web page (URL) I can access for more info?
Q17. Is there an email newsletter on OTR? How do I subscribe to it?
Q18. What ever happened to the person that played [insert character]
on [insert name of show]?
```

Q19. What is the best way to archive OTR programs?
Q20. My old reels squeak. Why does this happen, and can I fix it?
Q21. Where can I find more information about antique radios?
Q22. What is the best radio / antenna to get distant OTR stations?
Q23. Is there a group for modern radio drama ("new-time radio")?
Q24. I have only email access to the Net. Can I still get the files at your site?
Q25. I have never heard "Old Time Radio". Can I get an audio sample via Internet?
Q26. I have lots of loose OTR cassettes filling my drawers. Is there a better way to store these things?
Q27. All this new software is a bit difficult for me to use, as I am blind. Can you give me any assistance on how to access your page?
Q28. I am interested in re-creating some OTR drama. Where can I get scripts?
Q29. I can hear what sounds like another program playing in the background on many of my OTR tapes. Is this due to the tuning on the old radio or to the tape recorder that recorded the program?
Q30. Can I chat with other OTR fans on the internet?
Q31. Where can I buy 1970s CBS Radio Mystery Theater programs?
Q32. Is there an internet news group for old time radio?
Q33. OTR network shows were usually heard at the same local time, no matter what the time zone. How did they do this?
Q34. I'd like all the information there is about [insert name of OTR show]. Is there a FAQ that covers all the shows ever on the radio?
Q35. Is there any information on OTR conventions?
Q36. Are there any WWW Bulletin Boards where I can post OTR questions and read OTR information?
Q37. I would like to find recordings of [fill in rare OTR show name]. I have seen the show mentioned in Jay Hickerson's book, but haven't seen the show in any of the paper or on-line catalogs. How do I get this show?
Q38. I see a lot of OTR MP3s on the WWW. Are these worth collecting? How about the OTR CD-ROMs being offered on the WWW, are they worth the money?
Q39. Were any of the old-time radio personalities interviewed recently? Where can I find these interviews?
Q40. What MP3 player is best for OTR?
Q41. I keep reading/hearing about the LOC hoarding a bunch of unreleased OTR episodes. Is this true? How can I get them?

Q01. What is "OTR"?

A01. OTR is an acronym for "Old Time Radio", a term loosely applied to radio programs broadcast from the dawn of broadcasting to the very early 1960s. Alternate names are "radio nostalgia", "golden age radio", etc. Usually this applies to radio drama, mystery stories, comedy and adventures. Some individuals classify the resurgence of this type of radio programming in the '60s and '70s as "Revival Radio", and similar programming since the '70s as "Modern Radio

Drama". Purists even discriminate between the "Golden Age" (late '30s and the decade of the '40s) and the "Silver Age" ('50s). In any case, there are plenty of programs of various types that are enjoyable entertainment. Best of all, they don't require a large screen TV to enjoy 'em -- the "visuals" are provided by the listener's imagination.

Q02. You haven't mentioned OTR music, why not?

A02. There was a good deal of big band, bluegrass, country and other music broadcast during this era. For some reason, there seems to be more current interest in the dramas rather than in the music. You will find much more discussion about this topic in alt.music.big-band or the various news groups specializing in music of various types. Bluegrass fans might enjoy the Old Time Music on the Radio WWW pages. (They happen to use the same acronym, "OTR", but are not affiliated with The Original Old-Time Radio (OTR) pages). In addition, there is a Big Band and Other OTR Music BBS at www.old-time.com/otrbbss.html/

Q03. Where can I buy recordings of old radio shows?

A03. There are several individuals and companies willing to sell tapes and CDs of OTR programs. A partial list can be obtained from the www.old-time.com site. Many public libraries have a small stock for perusal as well. Some vendors and collectors even have their own WWW pages.

Q04. Which vendors have (lower prices) (higher quality) (faster response)?

A04. Prices, quality and service differ somewhat among all vendors. Check with other OTR fans to learn of their experiences, then check with potential vendors.

A comparative price chart, listing many vendors, is available at the www.old-time.com site.

Audio quality is an important consideration when purchasing recorded tapes. As yet, there is no "standardized" description of sound quality. Jim Widner and other OTR collectors have suggested various metrics to describe the quality of OTR recordings. Discussion of these standardized descriptors is summarized at the www.old-time.com site

---

Q05. Are OTR shows rebroadcast? If so, where and when?

A05. Yes, several AM and FM radio stations, satellite feeds, a shortwave station, and at least one Public Access TV station rebroadcast OTR. Check the Old-Time WWW page for current info. If you

learn of other sources, leave a note!

For AM listening, try the National Radio Club's AM Radio Log, 17th Edition: Complete Listing of U.S. and Canada AM Radio Stations (Mannsville, N.Y.: NRC, 1997). All AM stations carrying things like "Old Time Radio" are listed with the format code NOS (Nostalgia), and there are lots of other codes. [Order from NRC Publications, Box 164, Mannsville NY 13661-0164 USA. Price is: $22.95 post paid]

For FM listening, try Bruce F. Elving's FM Atlas (Esko, MN: FM Atlas Pub., 1993). Alongside lists, this has maps of your area and its stations as well. [Order from Bruce Elving, PO Box 336, Esko MN 55733-0336. Price Range: $11.00 + approx. $1.00 s/h]

The M Street Radio Directory, M Street at +1 615-251-1525 voice, or +1 615-251-8798 FAX. The address is M Street Corp., PO Box 23150 Nashville, TN 37202 The price for the 8th edition is $65.00 plus S&H

Q06. I remember a great show called (x). When was it aired?

A06. If the show was heard nationwide, look through the program databases / logs at the Old-Time site or at Jerry Haendiges' site (see answer A14 below). If the show was only on local radio, you will have more difficulty in finding an answer. Checking with your local radio stations is probably the best bet.

Q07. Are there any books about OTR?

A07. Yes, there are many books related to OTR. See the www.old-time.com site for a bibliography of several hundred books. There is also a page where you can read or enter critiques or reviews of various books on OTR.

Jim Widner and Everett L. Slosman left this address for a bookstore specializing in OTR books:

Rainy Day Books
P.O. Box 775, Rt. 119
Fitzwilliam, NH 03447
(603)585-3448

Bob Crump reminded us that most good used book stores will do a nationwide search for a title, if given enough time. Henry Brugsch related a good experience with the following on-line bookstore:

Acorn Books acornbks@netcom.com

There are also several "book finding" services that will help obtain old/out of print books for a fee.

Q08. Does anybody trade tapes of OTR shows?

A08. Yes. Check with the various on-line OTR services. Leave a note in the OTR Digest, alt.radio.oldtime, or Ray Plumlee's OTR Traders BBS at http://otr-trader.com/ Remember to observe copyright laws!

Q09. What's this stuff about Copyright?

A9. The copyrights on some OTR shows have expired. Several copyrights have been renewed, and some may have fallen under "common law" copyright (even though they were not originally copyrighted). 1970s era Berne Convention agreements further cloud the issue for non-lawyers. See the Old-Time WWW site for the latest "common sense" and legal citations.

A concise answer was given by 'A. Joseph Ross' (lawyer@world.std.com) (used with his permission):

Just to get a little perspective in this
controversy, copyrights do expire. Under the old
copyright law, a copyright was good for 28 years
from the date of first publication, renewable for
another 28 years, for a total of 56. Under the 1976
act, those copyrights were extended to 75 years,
provided they were renewed. Copyrights under the new
law, which took effect on 1 January 1978, are good
for the life of the author plus 50 years. Copyrights
on anonymous works, works made for hire, etc. are
good for 75 years after first publication.

So, since otr has just barely been around for 75
years, little or none of it is in the public domain
yet by reason of having been around for a long time.
The question of what constitutes publication, and
the fact that sound recordings could not be
independently copyrighted until the new law took
effect add additional complications.

Q10. How can I get my local radio or TV station to broadcast OTR programming?

A10. Call the station and tell them of the many people who like to listen to OTR. Suggest this programming will increase the number of listeners and help buy things from their advertisers.

Shawn Fulper-Smith (shawnf@cc1.uca.edu), a managing director of a non-commercial station, tells us:

The days of radio being ruled by the artisans is over, and
for some time now it has been in the hands of people who
only look at the bottom line, so to reach them you must
talk through public radio pledges, or through sponsors
on commercial stations.

Don Fisher (dfisher@sover.net) has been successful in getting his local Public Access TV station to rebroadcast OTR. In fact, Don is the MC of the program. Contact him for hints on how to get your Public Access TV station to do something similar.

Elizabeth McLeod (lizmcl@midcoast.com), who has spent more than 15 years working in local radio, gave the following advice:

I can tell you that one phone call from a listener means absolutely nothing to a program director. PD's are totally under the thumbs of their General Managers -- and GMs, in turn, base their decisions EXCLUSIVELY on sales issues. It doesn't matter how many people want to hear something -- if the GM doesn't think he can sell it, if the GM doesn't think it'll bring hard cash into the station, it won't get on the air. Period.

The only reason a commercial station exists is to make money for its owners. ALL decisions at the station, be they about programming or anything else, are made with this in mind.

Don't bother to approach the station itself, APPROACH THE STATION'S ADVERTISERS!!!

Listen to the station and figure out who its biggest sponsors are. Generally, they'll be local banks, car dealers, insurance agencies, and appliance retailers. Do you know anyone connected with these advertisers? Then approach these people. Tell them you've heard their ads on such and such a station, and that you think a lot of people would be interested in hearing OTR, and that advertising on an OTR series might be a good strategy. And get your friends to do the same. And be persistent! In other words, SELL THEM ON THE IDEA!

You need to keep in mind that some types of stations are more likely to air OTR than others. If your local station is has a firmly-defined format, you are probably "S-O-L," as the saying goes. They won't break format, no matter what. On the other hand, if you have a local non-commercial community-type station, way up on the left side of the FM dial, you may have a very good chance of success.

Q11. I have some old transcriptions and tapes, how can I make them sound better?

A11. You might try using a good equalizer and/or digital signal processing (DSP) unit between the playback and recording devices. Some people have mentioned that the Radio Shack DSP unit does a fair

job. There are also other, more expensive DSP units available from Ham radio stores and audio stores. Some subscribers have attested to the efficacy of the Timewave brand of DSP units.

There are several computer programs available to convert analog sounds (as on a tape) to a digital format (e.g. WAV file). Some of these computer programs also have noise reduction, filtering and enhancement capabilities. In many cases, application of digital technology will improve the sound of a noisy or deteriorating analog tape. There is a problem, however, if the digitized rendition is re-recorded to tape, and subsequently re-digitized for further treatment. Since digitization is a sampling technique, sampling a sample can result in extremely degraded sound patterns.

A very nice program that will convert analog material to digital format is Audiotools by Andrew Fish. For more information on this software, visit the Audiotools BBS at www.old-time.com/otrbbss.html or Andrew's site at http://www.unrelatedinventions.com/Audiotools/

From: hhoward@mindspring.com (Henry Howard)

For cassette machines (and reel to reels for that matter) occasionally take a "Y" cord and connect the output of your cassette player to both "sides" of the "Y". Plug the combined side of the "Y" into your stereo. If the sound is mush(ier) than what you hear normally, you have a head alignment problem (assuming that the tape you are listening to was properly aligned.)

From: Ron_B._Hare@livewire.com (Ron B. Hare)

Dolby HX on the recording deck makes an audible difference. Other audio optimization features are of negligible value for OTR. Dolby HX also requires no playback decoder.

[Dolby HX uses or "preserves" the Dolby noise reduction method of the master tape when duplicating - ed.]

Q12. Are there any OTR clubs near me?

A12. Check the club listings in the Old-Time WWW page, and leave a note in one of the on-line OTR groups asking about local clubs for your area. If you find a club that is not listed at www.old-time.com, ask a club officer to send a note to the webmaster with particulars about the club.

Q13. I have some OTR tapes of the same program, but their dates are different. Why?

A13. Sometimes broadcasts are dated according to their original broadcast date, and sometimes according to a date on which they have

been rebroadcast. For instance, the Armed Forces Radio Service rebroadcast many Mutual Radio transcriptions at a later date. Your tape may be of one of these later dates. Alternately, somebody might have made a mis-typopgoof.

Finally, some shows -were- broadcast more than once, and sometimes on different programs! For instance, a few Suspense shows were re-scripted / re-cast for Escape. You might also find similarities between certain SF shows as done on X Minus 1 and Dimension X.

Q14. Is there any place where I can get a complete listing of all the episodes in a particular program series?

A14. Some on-line OTR collectors have contributed Program Logs for several well-known series. The logs are available at www.old-time.com/otrlogs/ . While you are logged in at that site, check the "Humongous OTR Database" (a database of contributed catalogs and libraries), which is searchable with your WWW browser.

The "logs and publications" entry at the Old-Time WWW site gives names and addresses of several vendors of these items (thanks to RadioJoe5@aol.com (Joe Coleman) and others).

Jerry Haendiges maintains a VERY complete set of OTR program logs, at his Vintage Radio Place: (http://www.otrsite.com/radiolog)

Jay Hickerson maintains several logs and lists, as well as -Hello Again-, an OTR newsletter. Jay is the author of The Ultimate History of Network Radio Programming and Guide to All Circulating Shows. You can see more info at http://www.old-time.com/sponsors/hickerson.html

Jay's address is:

Jay Hickerson JayHick@aol.com
Box 4321
Hamden, CT 06514
(203) 248-2887 FAX (203) 281-1322

Q15. Is there any place where I can get a written synopsis of the plots or themes of OTR programs?

A15. Again, some vendors include this information with their catalogs. If you would like to contribute your interpretations of OTR plots or themes, send them to the on-line OTR services or to webmaster@old-time.com for inclusion in one of the databases.

Jim Widner and others have contributed some synopses / introductions to various programs. They are on file at http://www.otr.com and http://www.old-time.com.

David Hassell maintains a growing selection of program summaries at http://members.aol.com/DavidLHsl/otr/otrlist.html

Also check Frank Passage's logs at the old-time WWW site; most contain a short synopsis of the program.

Many of Jerry Haendiges' logs contain excellent summaries of not only the program series, but of each episode as well.

Many of the local and national OTR clubs maintain informational libraries with this material.

Q16. Is there a World Wide Web page (URL) that I can access for more information?

A16. Yes, there are several WWW sites. Each site contains different information, so you might want to visit them all. The major OTR WWW sites all have links or pointers to each other, so you can explore many topical areas within old time radio. Good places to start exploring are:
www.old-time.com
or www.otr.com
or www.otrsite.com

A fairly lengthy list of WWW sites with some kind of OTR affiliation is maintained at www.pe.net/~rnovak/jack.htm

An excellent database of OTR-related WWW sites, with an explanation of the contents of each is at
www.otr.com/cgi-bin/cgiwrap/otr/db.cgi?uid=default

Q17. Is there an email newsletter on OTR? How do I subscribe to it?

A17. Several newsletters currently exist. Here his how to get the best:

The Old-Time Radio Digest (AKA "Internet OTR Digest") is a very popular and freely available electronic newsletter, delivered nightly. Its purpose is to foster general discussions about the hobby of collecting, preserving and listening to OTR. To subscribe, send an email

TO: old.time.radio-request@oldradio.net
SUBJECT: subscribe
(The body of the message is ignored)

Q18. What ever happened to the person that played [insert character] on [insert name of show]?

A18. Check the "Personality Pages" at www.old-time.com for home pages of several well-known OTR personalities. Also check the Where Are They Now pages at www.440int.com.

Q19. What is the best way to archive OTR programs?

A19. The most popular way seemed to be reel-reel tapes, using each of the four tracks to record monophonically. Modern reel machines are in the > $2,000 range, and used open reel machines are becoming harder to find.

Purists claim open reel tapes are best stored "tails out", in which the tape is played (not fast-forwarded) onto the take-up reel. This method of storage makes "print through" of the magnetic sound image a little less noticeable because the "echo" will come before the louder sound that caused it, and be somewhat masked by the louder sound.

Cassettes are generally fine for portability / ease of use / exchange, but they suffer from several problems when used as a long-term storage medium. These problems include "overwinding" and splitting of the tape at the leader. Because of their thinner track width and slower speed (1 7/8 IPS), the density of the information is greater than with wider and faster (3 3/4 IPS or 7 1/2 IPS) reel tapes. This leads to a greater loss of signal (particularly high frequencies) over time.

The Hi-Fi VHS tape is gaining in popularity because of its six-hour storage capability and relatively robust mechanical construction. "Hi-Fi" decks need no video signal to synch the systems, and can thus record audio without an accompanying video signal. One T-120 Stereo Hi-Fi VHS cassette can easily hold 12 hours of OTR audio (recorded monophonically on the right and left channels independently). If the linear track can be accessed independently, this will add six more hours of recording time. There is very little fidelity loss when using this medium to duplicate programs.

Conrad Trautmann (CONRADTRAUT@delphi.com) left this note in response to a query about finding used reel-reel machines:

You can also call Harris/Allied used equipment division at 1-800-622-0022 or call Radio World magazine at 703-998-7600 for subscription information. Radio World is an industry trade and has used equipment listings in the classifieds once a month.

(Jim Blackie [jblackie@aol.com] indicates that the Harris/Allied number has changed to: 1-800-300-0733.)

From: vintage@infohouse.com (Andy Blatt)

I wholeheartedly recommend Play It Again, Sam of Lakewood, Ohio. They also sell used Pioneer reel decks with a warranty and accept major credit cards for repair or used machines. The address is 12611 Madison Avenue in Lakewood, Ohio 44107. The phone number (no answering machine, no fax machine) is 216-228-7330. As far as pitch control cassette decks, Marantz offers several one of which is the three-head portable PMD-430.

[Play It Again Sam has a WWW page at www.playitagainsam.com - ed]

Richard Novak (rnovak@ix.netcom.com) wrote this informative note on using Hi-Fi VHS as an archival medium:

To clear up any misunderstandings concerning VHS HiFi machines and their ability to record audio, I offer the following..

It should be understood that what distinguishes a HiFi machine from a linear machine is that the audio track is recorded helically (diagonally) on the tape along with the video track. On linear machines the audio is recorded at the upper edge of the tape (and a control track at the lower edge, if anyone wonders what the extra head is for.)

On a HiFi VHS the audio is not recorded as an analog signal as would be the case with linear recording. Instead the analog audio signal frequency-modulates a carrier which is then recorded between the video tracks. A duplicate signal is also recorded linearly to maintain compatibility with linear VCRs. The FM signal recorded on the HiFi track should not be confused with FM radio broadcasts. One of my customers thought the FM switch on his HiFi was for recording FM from the radio. Today's machines no longer use the label "FM", instead use "HiFi". Less confusing.

The sound recorded from FM radio broadcasts (or any other source) onto HiFi VCRs is virtually indistinguishable from the source. The material can be dubbed to cassette with no generation loss.

There is no difference in audio quality using either six hour or two hour mode.

It is true that at slower speeds the diagonal tracks are closer together. This does degrade the video signal as anyone knows who has compared six hour video with two hour video. But does not degrade the FM carrier with the audio track.

The tape writing speed of the audio track in HiFi mode is the same regardless of linear speed. This is because the head speed remains constant and is independent of the linear tape speed.

Worked it out once and it is around seven meters per second. Whatever it is, it's a whole bunch faster than 7 1/2 inches per second. If anyone really wants to know the writing speed, it is the circumference of the upper cylinder (or video head) multiplied by the rotational speed which is 30 revolutions per second, or 1800 revolutions per minute. (Two heads 180 degrees apart at thirty rps results in 60 frames per second.)

Who cares how it works.. The point is that VHS HiFi is the best and cheapest medium around for recording masters. But

not for archiving. Most experts still agree that reel to reel is the best and most reliable method of archiving. (Sticky shed syndrome from the 70s notwithstanding.)

Although Bob Burnham does not like dubbing (two-well) cassette decks for producing highest-quality cassette tapes, he does have a few recommendations:

One of the BEST dubbing decks (if you must use one) is made by Denon. Both sides can record at the same time and both sides have pitch control, and both sides have separate output jacks for connecting to other equipment.... almost like TWO (click) TWO (click) TWO DECKS in one. Tascam (Teac's pro division) also recently introduced their model 303 double deck. If it's anything like the 202 MKII, it's probably not worth it. You pay a high price for the name, but still basically consumer grade inside and lots of plastic. Denon is better.

I mentioned Kingdom Tapes in Mansfield, PA as a good source for cassette copiers, and equipment servicing. All the duplicators I have in use today came from this company. They have all the major brands (plus their own house brand), also tape decks, blank cassettes, etc. Great service (same day usually available). They'll beat anyone's price on cassette dubbers. 800-788-1122. Fax is 717-662-3875.

Bob Burnham / BRC Productions / P.O. Box 2645 / Livonia, MI 48151 platecap@gatecom.com / platecap@eworld.com

Several hobbyists are now investigating the utility of using CD-ROM or MiniDisks for archival purposes. CD-ROMs can hold hundreds of hours of program material, but at the cost of time-consuming conversion from analog to digital representations. Selection of appropriate encoding and compression technologies is extremely important to prevent digital artifacts. MP3 (MPEG III) compression seems to be more favored than is RealAudio(R) compression.

Q20. My old reels squeak. Why does this happen, and can I fix it?

A20. There are at least two causes for "squeaky reels" on a reel-reel tape recorder. (1) The tape edge may be rubbing against the rim of a distorted take-up reel, or (2) the oxide may be sticking to your erase (or other) heads. If the former, the least frustrating alternative is probably a new take-up reel. If the latter, Fred Korb left this note:

If you have any squeaky reels that you would like to recover, I will be glad to send you more information on how to do it. Just send me a stamped self addressed # 10 envelope and I will respond. Send your request

to: Fred Korb, c/o Oldtime Radio Collectors and
Traders Society, 725 Cardigan Court, Naperville,
Illinois 60565-1202. I am willing to help you preserve
the sounds of radio days gone by.

[Editor's note: Fred's method consists of a kit by which a
lubricating film can be automatically applied to the tape as it is
played. I tried it. Although temporary, it does indeed work! I'd
recommend it for those squeaky tapes that you wish to re-record onto
newer reels.]

Richard Fish (lodeston@bluemarble.net) also left this helpful info
about an alternative method:

HYRDROLYZATION is the culprit. The tape material -- the
backing, or the binder compound used to stick the magnetic
particles to the plastic backing -- has absorbed water
from the air. The water molecules actually make the tape
expand a bit, so it doesn't fit the machined tape-guides
properly anymore; and they can interfere with the
lubrication impregnated into the tape; and it is theorized
they can even interfere with the polished smoothness of
the tape surface.

WHY SOME TAPES AND NOT OTHERS? It depends on the
formulation of the plastic backing and binder. In the
mid-70s, both 3M (Scotch) and Ampex, the two major tape
manufacturers, started experimenting with their formulas.
They thought they were introducing major improvements,
but instead created a tape much more prone to
hydrolization than anything had ever been. The problem
did not show up for years, and the formulas did not get
corrected until sometime in the mid-'80s. Theoretically
any tape could get hydrolyzed over a long period of time,
especially if stored in a high-humidity situation, but in
practice most squeaky tapes were made (roughly speaking)
between 1975 and 1985.

WHAT'S THE FIX? Tom Lopez at ZBS (the most prolific and
entreprenurially successful producer of radio drama in
the US today) gave me his formula and I've done it many
times now and it works:

Bake the tapes in a convection oven for 8 hours at 130
degrees Fahrenheit. It is entirely possible to bake a
tape twice if the first time doesn't do the trick. You
get about a three-week "window", sez Tom, before the tape
starts to re-absorb water. So the best deal is to bake
the tape and immediately make a copy. But if you forget
to do it and it re-hydrolyzes, you can bake it again.

Q21. Where can I find more information about antique radios?

A21. An excellent place for discussions about antique radios, phonographs and accessories is the rec.antiques.radio+phono news group, created by Bill Robie. A pointer to his FAQ may also be found at http://www.old-time.com. Basically, r.a.r+p

- Is a *discussion* group, rather than a sales group (see r.a.m) - Focuses on radios, phonos, and related materials made before the 60s - Avoids "ham" radio gear (the Boat Anchors group covers that) - Has a -very- comprehensive FAQ that new folks should read

The University of Maryland has a WWW site entitled "Broadcast Pioneers' Library". This is an excellent resource for the serious / professional researcher. It can be accessed through the old-time WWW site, or directly via the URL: http://www.lib.umd.edu/UMCP/LAB/

Additional sites with pictures of old radios or other hardware resources may also be found at http://www.old-time.com

---

Q22. What is the best radio / antenna to get distant OTR stations?

A22. Several readers have been acclaiming the GE SuperRadio III as an excellent choice for picking up distant AM stations that carry OTR programming. Although the tuning dial has notoriously poor calibration, the sensitivity and selectivity seem superior to other radios.

Some readers have had good success with the Select-A-Tenna antenna advertised in several magazines, and the Grove Catalog. The S-A-T seems to be rather directional, and may eliminate off-axis interference.

Ham Radio magazines sometimes carry information about small loop antennas for AM DX-ing. Some pointers to instructions on how to build them are at http://www.old-time.com. Also, Dan Hughes (dan@soltec.net) left this note:

Several years ago one of the electronic magazines ran
plans with dimensions and number of turns, etc to build
one of these antennas. I have built several and I'm no
mechanic. If you (or anyone else reading this) would
like a copy of the article and plans, visit my website
at http://members.soltec.net/~dan

If you are interested in AM Broadcast Band reception, and technical articles related thereto, send a SASE to the following address for their product catalog:

National Radio Club
Publications Center
PO Box 164

Mannsville, NY 13667-0164

(The National Radio Club also has a WWW page, at www.nrcdxas.org/)

Q23. Is there a group for modern radio drama ("new-time radio")?

A23. There are several USENET groups whose charters include modern drama. Check the lists on your local Internet provider to see which are available to you. Here is a list of some of the WWW pages for radio drama (more may be found at http://www.old-time.com):

Atlanta Radio Theatre Company: www.artc.org
ZBS Media http://www.zbs.org/zbs.html
LodesTone Productions
http://www.bluemarble.net/lodeston/lode.html
Midwest Radio Theatre Workshop http://www.mrtw.org/mrtw

Q24. I have only email access to the Net. Can I still get the files at your site?

A24. Maybe. WWW pages can be retrieved by email. Get the following file for more information:

Accessing The Internet By E-Mail
Doctor Bob's Guide to Offline Internet Access

This document is now available from several automated mail servers.
To get the latest edition, send e-mail to one of the addresses below.

To: mail-server@rtfm.mit.edu (for US, Canada & South America)
Enter only this line in the BODY of the note:
send usenet/news.answers/internet-services/access-via-email

To: mailbase@mailbase.ac.uk (for Europe, Asia, etc.)
Enter only this line in the BODY of the note:
send lis-iis e-access-inet.txt

Since the OTR FAQ is an "official" FAQ, a copy of it is stored at MIT, and is available from the MIT mailserver. For more info on how to get files by email from MIT, send a message

TO: mail-server@rtfm.mit.edu
SUBJECT: [blank]
BODY:
help
end

I have also initiated a simplistic file server. At present, it can handle only a few files. If you have ONLY email access to the

Internet, and want more information on what is available by email, send an email in EXACTLY this format:

To: files@old-time.com
Subject: send help.otr

do NOT put anything in the body of the message (it won't be read)

Q25. I have never heard "Old Time Radio". Can I get an audio sample via Internet?

A25. Yes, if you have a suitable WWW browser and sound card. Connect to any of the WWW sites mentioned above, and follow the pointers to their audio clips and / or soundbytes. Many of the soundbytes can be downloaded, and played on your computer's sound card, others will play "realtime" through your multimedia system. There is also a news group, alt.binaries.sounds.radio.oldtime, that tries to transfer OTR shows (news groups are notoriously inefficient at transferring large binary files, however).

You can select from many moderate-length soundbytes at Jerry Haendiges' Preview Listening Lounge at www.otrsite.com/ra/preview.html
---

Q26. I have lots of loose OTR cassettes filling my drawers. Is there a better way to store these things?

A26. Collectors with lots of cassettes seem to use just about everything from "underbed cardboard storage boxes" to old soft drink cases. If you want your collection to have a more "professional" look, here is a note from Ron_B._Hare@livewire.com (Ron B. Hare)

You almost need to buy cassette albums from specialty suppliers. Radio Shack used to carry a small line of these and charged too much. We are in the recording studio business, and receive catalogs from several sources. The one I like best has some of the lowest prices and unhesitatingly deals with individuals and will take your credit card number over the phone for instant shipment (in contrast to some who require account setup, purchase orders, prepayment, cash and other nuisances).

They have two catalogs: one for audio and one for video. Cassette albums are available in a large number of different styles, sizes and capacities. The 8-cassette albums I use are CPCN.4+4M/WHT in white and CPCN.4+4M/RBLU in royal blue. Outside dimensions are 9 7/8 x 7 x 1 1/4 wide, so they fit well on a bookshelf. This model also seems to cost less per cassette than any of the other models,

though logic might lead you to the conclusion that
the larger capacity ones would cost less.
[Polyline has a website at www.polylinecorp.com, and their new
address and phone number are:

Polyline Corporation
1401 Estes Ave.
Elk Grove Village, IL 60007]

Q27. All this new software is a bit difficult for me to use, as I am
blind. Can you give me any assistance on how to read your page?

A27. Yes. Although my WWW page is best viewed with Netscape or
Microsoft Explorer, most pages render well with LYNX and associated
reader software.

Blind visitors who depend on DOS-based software to access the net, or
who use a reading program to audibly display their computer's output
might be interested in a program called "Nettamer". The Nettamer home
page is at www.nettamer.net/

Q28. I am interested in re-creating some OTR drama. Where can I get
scripts?

A28. Check your local or national OTR clubs. Many have a "print
library" that includes scripts. You can also point your browser at
the University of Maryland's script page, at
www.lib.umd.edu/UMCP/LAB/scripts.html

Jack French (OTRpiano@erols.com) said:

One excellent source is the book. "One Hundred Non-Royalty
Radio Plays" compiled by William Kozlenko, Greenberg Publ of
NYC 1941. It's certainly out of print now, but many libraries
would have a copy. I bought mine at a used book store a few
years ago. The 100 radio plays in the book include adventure,
mystery, fantasy, comedy and historical. Most were originally
produced on educational stations in the 30s. Authors include
Saroyan, Julian, and Liss.

Larry Groebe, of the Generic Radio Workshop, has several pages
dedicated to on-line OTR scripts at http://www.genericradio.com
---

Q29. I can hear what sounds like another program playing in the
background on many of my OTR tapes. Is this due to the tuning on the
old radio or to the tape recorder that recorded the program?

A29. In addition to the old radio being mistuned, similar problems
can be caused by one or more of the tape recorders used before you
received your copy of the program. Print-through has already been
mentioned in Q & A 19. Bob Burnham has a nice explanation of two more

problems: crosstalk and channel leakage.

Crosstalk and Channel Leakage are 2 different things. OTR collectors seem to have the most problem with channel leakage.

When you hear another program faintly playing in the background in normal direction, this is usually Channel Leakage. This is a leftover problem from the 1970s & early '80s when most collectors traded on open reel tapes which were quarter-track mono -- there were different (separate) programs on left & right channels. This allowed 6 hours of shows to be placed on one reel. Unfortunately, many collectors would duplicate L & R shows simultaneously. Depending on the quality of the equipment (and its condition) it was common for one program to bleed into the opposite channel...especially if the collector was careless and allowed over-modulation.

Crosstalk results when a tape is recorded (or played back) on a machine with mis-aligned tape heads. It can also occur when trying to record over a 1/2 track recording with a 1/4 track machine with dirty or mis-aligned erase head. You usually will hear another program playing IN REVERSE in the background.

HOW TO PREVENT CHANNEL LEAKAGE AND CROSSTALK...

If duplicating quarter track reels, copy ONE channel or track at a time. As for crosstalk, make certain your machines are kept in proper alignment. Use a high quality BULK ERASER if you re-use old tapes... this is especially true for those who use reels.

Sorry, there is NOTHING you can do to remove these flaws once they are there.

Q30. Can I chat with other OTR fans on the internet?

A30. Yes. Lois Culver (lois@chatlink.com) and other OTR fans meet every Thursday at 8:00 PM Eastern time, on Channel #OldRadio, on the StarLink-IRC. If you are unfamiliar with Internet Relay Chat, please get software and instructions from your favorite Internet Service Provider or shareware/freeware software site, or connect to www.old-time.com/irc.html for basic instructions.

Q31. I'm looking for copies of old "CBS Mystery Theatre" radio programs, primarily from the 1970s era. Does anyone know where I can call or write to obtain such items? I'd like to purchase a complete set if possible.

A31. Jack French (OTRpiano@erols.com) left the following information:

You most certainly do not want a complete set of this series, because you couldn't afford it. There were 2,970 shows aired so even if you could find them for a buck an episode, you'd have to cough up three Gs. The series ran from 1-6-74 to 12-31-82 and since it came so late in radio history, every episode was recorded by somebody. All episodes are still copyrighted, and CBS enforces their copyrights. Therefore no dealer is going to list them, and collectors are reluctant to sell or rent them. Your only hope is to find some way to get copies in a fashion not in violation of copyright law.

Editor's note: By my count, there were about 1400 different CBSRMT shows. The rest may be duplicates.

Q32. Is there an internet news group for old time radio?

A32. Yes. alt.radio.oldtime is available via some news servers. Since many news servers ignore alt.groups, you may need to contact your ISP to get that news group listed locally. See www.old-time.com/newsgroups.html for more information. Also try www.deja.com to sample some of the messages.

Q33. OTR network shows were usually heard at the same local time, no matter what the time zone. How did they do this?

A33. Two ways: Many networks used telephone lines to carry the show from the studio to transmitter sites. The show was done live at least twice - once for the East coast, once for the West. After Bing Crosby spearheaded the introduction of recorded shows (about 1948), the East coast show was recorded for later telephone transmission to the West coast.

Q34. I'd like all the information there is about [insert name of OTR show]. Is there a FAQ that covers all the shows ever on the radio?

A34. No. There are many books (Remember them? They have words printed on pieces of processed dead tree) written about what we now call "OTR". See answers A7 and A37. If you would like to contribute an original article about one or more facets of OTR, many of the webmasters of on-line OTR sites would be happy to consider archiving it.

Q35. Is there any information on OTR conventions?

A35. Yes. There are several. Here are some of the larger ones:
* Annual OTR and Nostalgia Convention in Cincinnati, OH (April)
* Radio Classics Live, Brockton MA (May)

* Annual Lum and Abner Society Convention (June)
* REPS Radio Showcase (June)
* Friends of Old-Time Radio (October)
* SPERDVAC (November)

See the convention page at www.old-time.com for specific dates and contact person info.

Q36. Are there any WWW Bulletin Boards where I can post OTR questions and read OTR information?

A36. Yes. Try Old Time Radio Bulletin Boards at www.old-time.com/otrbbss.html. That page contains a list of several old-time radio oriented WWW bulletin boards. You can also access OTR message boards at http://www.lofcom.com/nostalgia/phorums/

Q37. I would like to find recordings of [fill in rare OTR show name]. I have seen the show mentioned in Jay Hickerson's book, but haven't seen the show in any of the paper or on-line catalogs. How do I get this show?

A37. Jack French, an expert on old-time radio and editor of Radio Recall, gives us this information:

There's good news and bad news....the good news is if Jay's compendium says they are in circulation, somebody has them. The bad news is there is no guarantee you'll find them. Let's start at the beginning. If they're in Jay's book, and there is either the initials of a dealer, log preparer, or collector with that entry, the assumption is that person has some or maybe most. If the entry is devoid of such, we push on. Few dealers list rare shows in catalogs since so few people want to buy them. Generally the catalog represents a small part of a dealer's or collector's total holdings. There are at least forty OTR dealers in the country so you can contact each one with a specific inquiry. Most collectors belong to at least one OTR club. There are about 20 clubs. Most will publish your request in their newsletter for little or no cost. Most of the members of OTR clubs are not on-line so this is the only way to reach them. There are over 25 state and college archives that may have the shows. Most have no catalog but will answer any reasonable inquiry. Contact them all. All of the contact addresses for OTR clubs, pubs, dealers, and archives are contained in NARA OTR Source List. Contact me separately if you're interested in this low-cost research aid.

Q38. I see a lot of OTR MP3s on the WWW. Are these worth collecting? How about the OTR CD-ROMs being offered on the WWW, are they worth the money?

A38. Just as with home made recordings of any type, the quality of OTR MP3s varies considerably. Some of the online MP3s may have been converted from low sample rate RealAudio(tm) files, others might have been "ripped" from low-generation masters. Most CD-ROMs for sale on the WWW were recorded using these varying-quality MP3s. In other words, the MP3s in themselves are "collectable" only for the enjoyment one might get from listening or further trading. They have little intrinsic value, and are of unknown quality. It might help to associate your estimate of quality with the provider's name, to attempt to predict quality and avoid long downloads of poorly prepared material. Another point to remember - some OTR is still under copyright protection. Please observe applicable copyright laws.

Q39. Were any of the old-time radio personalities interviewed recently? Where can I find these interviews?

A39. A large number of OTR personalities were interviewed by the author John Dunning. Stewart Wright, Editor of the RHAC Newsletter gave us the following information. (You can learn more about RHAC by checking their page at http://www.old-time.com/sponsors/rhac.html)

The Radio Historical Association of Colorado (RHAC) has tapes of many OTR personalities interviews that were conducted by John Dunning in the 1980's. Several Radio personalities such as Elliot Lewis were interviewed more than once. The following is a fairly complete list of the Dunning interviews in the RHAC library.

Steve Allen, Elvia Allman, Eve Arden, Hy Averback, Parley Baer, Parley Baer and Georgia Ellis, Parley Baer and Sam Edwards, Parley Baer and Whitfield Conner, Bill Baldwin, George Balzer, Harry Bartell, Andre Baruch and Bea Wain, Court Benson & Grace Matthews, Bernice Berwin, Mel Blanc, Ray Bradbury, Curley Bradley, Frank Bresee, Candy Candido, Hal Cantor, Charles Collingwood, Whitfield Conner & Haila Stodd, Whitfield Conner and Parley Baer, Whitfield Conner and Virginia Greeg, Norman Corwin, Mary Jane Croft, D Day Program J Macvane & Lar, Dennis Day, Rosemary De Camp, John Dehner, Kenny Delmar, Jerry Devine, Howard Duff and Dick Joy, Richard Durham, Ruth Duskin Feldman, Sam Edwards, Sam Edwards and Janet Waldo, Alice Faye, George Fenneman, Morton Fine, Al Flanagan and Dick Mcdaniel, Paul Frees, Fred Friendly, Alice Frost, Art Gilmore, Roberta Goodwin (Bob Bailey's Daughter), Gale Gordon, Virginia Gregg, Virginia Gregg and Whitfield Conner, Phil Harris, Clarence Hartzell, Dennis Horseford, John Houseman, Bill Idelson, Raymond Johnson, Jack Johnstone, Jim Jordan, Dick Joy, Roland Kibbee, Sheldon Leonard, Phil Leslie, Larry Lesueur, Elliot Lewis, John Macvane, Fletcher Markle, Fletcher Markle, Grace Matthews & Court Benson, Dick McDaniel and Al Flanagan, Dick McDaniels and Pete Smythe, Marvin

Miller, Shirley Mitchell, Carlton E Morris, Morris Kaplan, Frank Nelson, E Jack Neuman, Nelson Olmstead, Vic Perrin, Michael Raffetto, William N Robson, Eric Sevareid, Anne Seymour, William L. Shirer, Penny Singleton, Pete Smythe Collegiate Band, Olan Soule, Berne Surrey, Glenhall Taylor, Irene Tedrow, Cliff Thorsness, Les Tremayne, Lurene Tuttle, Veola Vonn, Janet Waldo, Gertrude Warner, Peggy Webber, Anne Whitfield, and Dr. Paul Winchell.

The Radio Enthusiasts of Puget Sound (REPS) also has interview tapes of many Old-Time Radio personalities. Most of these interviews have been conducted in the 1990's. Personalities include:

John Archer, Harry Bartell, Frank Buxton, Chris Conrad (Son of William Conrad), William Conrad, William Conrad & George Walsh, Stewart Conway, Norman Corwin, Sam Edwards, Herb Ellis, Charlie Flynn, Jim French, Sandra Gould, Burl Ives, Peggy Jordan (Granddaughter of Jim & Marian Jordan), Merrill Mael, Jo Anna March, Les Tremayne, Janet Waldo, Anne Whitfield Phillips, Rhoda Williams, and Douglas Young.

The REPS web site is located at: http://welcome.to/reps

Yesterday USA on the Internet is doing a series of live interviews with OTR personalities about one every two weeks. They start at approximately 8 PM (ET) on alternate Sundays and are about 1 hour in length. The interviews are conducted by John or Larry Gassman. So far they have done Harry Bartell, Herb Ellis, and Conrad Binyon. Listeners can call in questions.

You can find out more information on upcoming interviews by going to the YUSA Home page at http://www.yesterdayusa.com/

Q40. What MP3 player is best for OTR?

A40. MP3s can be played on most computers, memory (RAM)-based players, hard-drive players, and CD-ROM based players. Each player has advantages and disadvantages. A chart comparing various CD-ROM players for OTR playback suitability is at www.old-time.com

---

Q41. I keep reading/hearing about the LOC hoarding a bunch of unreleased OTR episodes. Is this true? How can I get them?

A41. The Library of Congress (LOC) does indeed store copies of many old-time radio shows. Any qualified person can access this material, or even get copies. There are, however, some restrictions on its use. Elizabeth McLeod (lizmcl@midcoast.com), who has done much research in the area, gives us this information:

LOC material may be listened to at no charge at the Library's Recorded Sound Reference Center by "qualified researchers"

working on a project intended for public distribution -- from a full length book to an article for your local OTR newsletter. You cannot, however, make copies of the material due to the contractural and copyright restrictions which the Library is required by law to observe. (While the LOC preserves and houses the material, it doesn't own it.)

It is possible, though, to obtain copies of the material from the LOC by going thru a process which is neither fast nor inexpensive. But if you have the patience and are willing to spend the money for material you can't get any other way, here is what you do:

1. Locate the specific item in the LOC's SONIC database, accessible from the Recorded Sound Reference Center Homepage, http://lcweb.loc.gov/rr/record/

2. Make note of the LOC Call Number and description of the item you need.

3. Phone, fax, or email the Recorded Sound Reference Center with the items you are requesting -- contact information is available on site. The Reference Librarian who handles these things is Brian Cornell.

4. The Library staff will determine what legal permissions will be required in order to copy the items you want, and will contact you with the names and addresses of the people who must be approached in order to get these clearances. If the item is from the NBC Collection, you will need to clear rights with their Intellectual Property Department in New York. Additional clearances may be required if the program is under a separate copyright.

5. You must write to the people specified and ask permission to have a copy made. It's a good idea to specify why you need the copy -- and don't just say "because Joe Blow is my favorite radio comedian." If you don't have a professional-sounding reason, make one up.

6. Wait to hear back from the Legal Entities. If you've written to NBC Intellectual Property, you will get a letter back from them in about four weeks. Two copies of a legal contract will be enclosed, specifying what you may and may not do with the recording. Sign both copies, and send one of them back to NBC.

7. NBC will advise the LOC that it has granted permission, and in about three weeks you will get back a requisition form from the Library's Phonoduplication Lab. You'll need to check it over, sign where specified, and send one copy back to them with your check for the lab fee -- which starts at $86 per hour, not including the cost of tape stock. Then, fax the other copy of the form, and a photocopy of your check to the lab, and they'll

begin processing your duplication request. (Yes, the fee is outrageous -- but there are worse places to spend your money than with the entity which has done more for the physical preservation of broadcasting history than any other organization in the United States....)

8. In about four weeks, FedEx will deliver your tape. Needless to say, you may not make any commercial use of the recording in whole or in part -- and you had to sign a contract to that effect in order to get access to it. Commercial permissions are a whole separate case.

Like I said, this is not for everyone -- but if you're working on a serious project, it can be a valuable resource for getting access to material that simply isn't available anywhere else and which is unlikely ever to be released on the commercial market.

Elizabeth

My particular forte' is two way radio but I like to keep at least a cursory knowledge of broadcasting technologies.

It seems to me that FM broadcast suffers only from content rather than fidelity.

I see the migration from analog to digital as an answer to a nonexistent problem (at least for FM broadcast). I further believe this migration will exaggerate any noise / picket fencing etc. as evidenced by PCS and digital cell phones.

I don't understand why any station would subject themselves to the technical issues and monies to lower their signal quality. I would suppose the new digital stations would do ok in some parts of the country where the terrain is flat and open. I, however, live in mountanous country in Reno, Nv. I believe digital would prove a disaster here.

If I'm correct in my assumptions, the FM digital signal would be at a considerably lower output power than the main broadcast output. Isn't there also an issue with possible adjacent channel interference? Since the typical FM transmitter and amplifier is probably running class C for efficiency, going to digital presupposes a change to a more linear and considerably less efficient class of service for the transmitter and amplifier. I figure there has to be a combiner system for the new service and this introduces a considerable power loss. This sure seems like a lot of work and money to put out a worse signal.

If anything were to go digital around here I would like to see AM broadcasters do it. I think it makes more sense. Propagation for AM here in the mountains. The transmitter and amplifiers are already linear. The inherent noise on AM reception would pretty much disappear. The fidelity would be improved considerably probably rivaling present day FM broadcast.

Well, since this makes too much sense, I figure it'll never happen.

Most manufactuerers claim a 1 to 2 mile range on FRS radios but that is under optimal conditions. Inside a mall or casino the range would certainly be reduced but probably still good for what you want.

However, I would be VERY reluctant to try and use these in a casino without the consent of management and/or security. At a minimum you would be likely to get thrown out.

Incidentally, the USMC recently purchased 13,000 frequency modified FRS radios from Icom to use as "intrasquad radios." See the press release at http://www.icomamerica.com/press/index2000.html#marines

2695. Deacon Don Evans

Newsgroup: rec.radio.broadcasting
Date: 2001-07-27 03:41:46 UTC
From: wallyw26 <wallyw26@airmail.net>
Message-ID: <tm1onqh4g6dra4@corp.supernews.com>
Source record: 13756

"Deacon" Don Evans, long time announcer for the old KPBC and KAAM passed away Friday of brain cancer.
According to the obituary in the Dallas Morning News, he was 56 and is survived by his wife and family. I never met Don though I had a question about a copyright of a religious hymm once, called him, and he took the time to research the information for me. On the air you could tell he was a class act all the way around.

It's my contention that Don had the second longest active tenure on Dallas/Fort Worth radio, particularly at one station (and also one employer) after Ron Chapman.

According to their on-air promotion KAAM will have a day-long tribute to Don on Thursday 7-26.

A little off-topic , but Huey Lewis and The News actually performed under a different name at the height of their career a few years ago, for one show at the Hampton Beach Casino...

It was an opportunity for them to slip into the area and perform a gig while Huey visited his grandmother in nearby Methuen, Massachusetts.

The Rolling Stones also did a nightclub gig in Worcester, Massachusetts under a bogus name on one American tour.

As far as one-hit wonders go - the movie "That Thing You Do" has been playing on cable in the past week - the story of a 1960s group, a one-hit wonder group from Pennsylvania. Name of the group = "The Wonders".

As far as a band performing one-hit wonders and fading out - remember that a lot of those bands were STUDIO bands - a producer had the aural "hook" - the ability to write and produce a record that would become a hit. When studio musicians are being paid an hourly rate and have no stake in the success of the record, one or two "one hit wonders" can make a lot of money for the producer and the record company. Back in the 1960s, anyone with a little savvy in promotion, a good musical ear, good production skills, acquaintances with the right DJs, and a cheap recording studio and record press could make a lot of money. In fact, some hit records were recorded in living rooms or garages or even tiled men's rooms.

Even the mighty Motown records was started as a garage project by Berry Gordy.

In those days, audio quality wasn't too important as most pop stations were AMers. The medium was 45 rpm monural vinyl, and the records didn't last long. Didn't have to, either, and phonograph equipment for the most part was poor by today's standards. Pop groups only toured to promote their records, and not necessarily to entertain an audience, and their on-stage act really didn't have to be very good.

As far as manufactured groups - the trend continued. Some will argue that many of today's recording artists are "manufactured" - real people are used, but is their act for real, or is it shtick, created and packaged by a music company's marketing group ? For exhibit A I offer Sinead O'Connor. Was her act sincere (black clothes, bald head, songs about dead people, tearing up a pic of the Pope), or was it a laboratory-created image? Who is to know? I do not question her talent but I do wonder how she was promoted.

2698. RF Effect on Vision

Newsgroup: rec.radio.broadcasting
Date: 2001-07-27 03:41:52 UTC
From: John Michael Williams <jwill@AstraGate.net>
Message-ID: <tm1oo0nsjamcab@corp.supernews.com>
Source record: 13759
Cross-posted to: rec.radio.shortwave,rec.radio.cb,rec.radio.noncomm,rec.radio.broadcasting

Hello.

I'm interested in the biological effects of RF.

I am not involved in any related commecial venture
in this area, but I would like to test the accuracy
of a theory. The current crude version ("Thermal
and Nonthermal Mechanisms of the Biological Interaction
of Microwaves") is posted as a preprint at:

http://xxx.lanl.gov/abs/physics/0102007

for anyone interested.

A correpondent has mentioned that a friend who
recently obtained an amateur radio license says
that he sees "stars" when he operates his 4W
handheld transmitter for prolonged periods
with the antenna close to his head.

This happens to fit to my own impressions,
which I would describe more as a case of the
"fortification illusions of migraine" (I guess
I can use technical jargon in a technical
newsgroup?).

The exact cause of these visual impressions,
which resemble sparkling afterimages after
looking at a bright light, is unknown; but, a
reasonable idea would be that they result
from changes in blood pressure in or near
the visual regions of the brain. They may
represent slowly spreading seizure activity
in the neurons, too. There is no pain or
other feeling, and they seem to disappear
after a few minutes with no obvious
long-term effect.

Question: Has anyone in the group noticed
this? If so, I would be interested in details
of the conditions under which it occurs:
Transmitter characteristics, time-transmitting
duty cycle, length of transmission until the
effect begins. Location of the antenna
in relation to the body.

Other effects also would be interesting. A government report cited in the preprint documents tinnitus (hissing or high-pitched keening sounds) caused by wideband radar pulses; tactile sensations and blood pressure effects have been reported, but any repeatable, reliable effect on the body would have significance.

I have no connection with any government, but I am very interested in (a) better understanding how RF interacts with the human body; and, (b) being able to specify proper filters for wideband RF sources, so that undesirable biological response would be prevented.

amounts
> and lengths do not gaurentee continued success.

...actually, he merely lost his Texaco sponsorship in '54; he was picked up by Buick for a short while, but that didn't last long, and it was '56 when he left the weekly variety show grind (Elvis was one of the guests on his last show, pre-dating the Steve Allen and Ed Sullivan appearances)...NBC then had a helluva time figuring out what to do with Miltie; he popped up on "Kraft Music Hall" from time to time, but it wasn't until a ready-for-roasting turkey titled "Jackpot Bowling with Milton Berle" showed up for a toilet stop circa '60 that NBC finally put him out to pasture...NBC modified his contract so that he could show up on ABC in '66 (as a guest villain on "Batman" and host of a new variety hour that lasted 13 weeks), but past that he's been in has-been hell ever since...seems to me Jackie Gleason found himself on similar outs with CBS a few years after that...

...but your comments about contracts not indicating longevity are on-the-money...

WCBN WILL DESTROY YOUR FEEBLE FORMATS

WCBN - Over 25 Years of Freeing Your Mind - Listen to us online!

WCBN is the University of Michigan student-run community freeform radio station in Ann Arbor, Michigan. We broadcast at 200 watts to the University and its surrounding communities from the basement of the Student Activities Building in downtown treetown. We have been broadcasting a genre-less overview of music, news, and public affairs for over 25 years.

WCBN's musical format is freeform, with some specialty shows. Freeform involves all different kinds of music, including jazz, reggae, blues, hip-hop, country, rock, and just about everything else under the sun. Instead of telling our DJs what to play, we allow them to select their own recordings from our vast and unique library. It is their responsibility to mix together many different kinds of music in an intelligent fashion, and show links between musical genres.

Click here to listen to our live WCBN-FM Ann Arbor broadcast!

I'm going to be doing a sports update each week, and am looking for some "sports intro" type music for the beginning and end.

Long ago I remember some of this type of music on a sound effects LP (that's how long it was :-), but I have long since misplaced it.

Since I will be doing this "on my nickel" (I'm paid generally for my time on-the-air, but nothing extra for the sports update) I need something on a CD or whatever that is affordable (no contract for my own unique, specially composed theme. :-)

If anyone knows of any resources for this, please let me know.

I heard that word on PBS a few days ago. On a show about rock concerts
in the late '60's, specifically the Woodstock concert.

2705. New STAGE LEFT episode on line: "Classic Tracks"

Newsgroup: rec.radio.broadcasting

The latest edition of the STAGE LEFT webcast went on line today (July 25). You can listen to it any time with RealPlayer at http://www.stageleft.org or http://www.kdhx.org/listen.htm Please send me a note with your comments at chuck@stageleft.org

This week it's the first in a series of "Classic Tracks" episodes, each one of which will feature a complete LP or CD of historical and/or artistic significance. This time it's the 1969 classic "How Can You Be In Two Places At Once When You're Not Anywhere At All?" by the Firesign Theatre. The two radio plays on the album are the surrealistically goofy title cut and the '40s radio parody "The Further Adventures of Nick Danger".

You can get both the current episode of STAGE LEFT and the last four shows at http://www.stageleft.org or http://www.kdhx.org/listen.htm. This week's play list is at http://www.stageleft.org/010725.html

Next Week (8/2): "You're No Good" - A celebration of villainy on the musical stage, from opera the musical comedy.

Ask in alt.radio.family

Breif answer: Depends on what is in between you an how far away you
are.

I just picked up a couple of these FRS radios and haven't had much
chance to check them out yet, but I can get 1/4 mile in an urban area
with no trouble. I expect more on the road (between cars). I've heard
of people getting 100+ miles between mountaintops. ;-) Basically,
these are line-of-site radios, using frequencies in the 460 MHz band.

If you are both inside the same big room (e.g., casino) they'd probably
work. If you are in different stores of a concrete-and-steel mall it
probably depends on how much concrete and steel are actually between the
two of you, and how far apart you are.

>it. Meanwhile Coca Cola had two products out there making use of the Coca
>Cola franchise, and all the money went to the same place--Coca Cola Company.
>Maybe not the best analogy, but you get my point..

This is actually a poor analogy. It was about the time of New Moke that Coke
began losing its much cherished number one position in total sales. It managed
to alienate long term users of its product for no gain in real sales. Since
Coke was perceived as less sweet than Pepsi (sweetness is what folks go by in
most of the head to head taste tests, allowing someone to rinse in between
tastes can produce different results) New Coke was sweeter, and had a taste
more similar to Pepsi. Possibly a good idea for an upstart, but a lousy idea
for an established brand with long term users. It was actually easier for old
users to give up cola entirely than switch, and there are some folks who swear
that classic coke doesn't really taste as good as coke did pre-New Coke, since
it was then mostly made with cane sugar.

It's amusing to see a splintered market used to justify even more ownership of
splintered stations. Part of what the new ownership groups can do very well is
sell a variety of demographics/markets at the same time even though for many of
the ad buyers, they could have reached a lot more listeners for less 15 years
ago with one buy. The other problem is that radio is becoming more and more a
collection of formats used to attract advertisers more than listeners, while
lots of listeners are ignored, and sadly often a station is purchased for such
a huge price that it can't realistically make money without allowing
explaitative advertisers to work their "magic", which isn't good for other
advertisers or radio in the long term. It's one thing to advertise baby chicks
by mail and deliver them, it's quite another to advertise psychic networks,
massage parlors and the like.

I have been expoused to fairly high (several watts\CM)
RF at variious freqs from 100KHZ to 18GHz. And I never
"saw" any thing odd. The only oddity I ever experienced
was when I was downrange of a giant 400MHz radar that was
being tested in Ft. Knox back in 1961. I "heard" this
"buzzing" "sound" that seemed to be coming from the middle
of my head. The other recruits and the drill sargent
"heard" it also. I think it was for a DEW line installation.
BMEWS comes to mind. I was a young recruit, and though I had
been a ham for 5 years, I did not know enough to even think to
ask any questions. But as a recruit, I did know enough to
keep quite.
There ought to be a lot of ex military techs that worked on,
or service that style radar. There were many sites from Greenland
through Alaska. And I bet they have meetings where these guys
get togather every now and then.

2711. Re: Arbitron, Clear Channel mix it up...

<Realtor@RayDennis.com> writes:

>This is one of the fears I have had about duopolies, and it is coming
>true!

Clear Channel uses arbitron as a tool to convince advertisers that they should purchase their services. Arbitron is probably better off not buckling in the long run, since Clear Channel has to either find a new rating service or convince advertisers to only rely on sales figures and take a chance that the advertising will work. Clear Channel targets demographics for the benefit of attracting advertisers, and the only two tools it has are results (meaning that it can keep advertisers conviced that its marketing works, what else is new) and demographics. Without arbitron, it has outdated arbitrons. Duopoly might seem to give power, but arbitron is in effect presently a monopoly and CC will spend more subsidizing a real competitor than it would paying the present arbitron rates. Besides, just imagine the fun as competitors cull the public announcements of ratings books and no CC stations show up. Sorry, but if arbitron holds out, CC has problems.

Clear Channel seems to getting very lax, especially in their Top 40
outlets.

For example, WRVQ is spinning The Rock Show by Blink 182 - the F word
is sung very quickly, and not censored on the air. Same song also
spinning at WHTE without the edit.

The only reason for digital radio is to sell equipment. There is no
benefit to the listener. Broadcasters are rushing into it because
they think they'll have to be "digital"to compete with satellites.
None of this stuff is going to sound any better than what we have
today, certainly not on the typical crappy transducers installed in
cars and clock radios. But equipment manufacturers are hoping for a
bonanza.

Please contact me if you are interested in the purchase of a 10,000 watt RCA BTF-10 transmitter unit, with all components.

It worked well when taken out of service approximately 7 years ago, and has not been moved or even disconnected.

Price is to be negotiated, but very, very reasonable.

>Well, since this makes too much sense, I figure it'll never happen.

I totally agree with you. . Digital on AM would be a really good Idea if they can make it work. It will probably never happen that way because an AM station with excellent fidelity and coverage would be a serious threat to existing FM stations (digital or not).

Companies in control of the broadcast industry have paid King's Ransoms for FM stations, frequently paying way beyond what they can reasonably expect as a normal return on their investment from merely operating it. (How many spots can you sell during a day?)

Therefore, the owners either must be planning on eventually selling these properties for more than they paid for them, or they're really in it just for cash flow. They can do that because they purchased them with somebody else's money. afterall, nobody ever said you have to pay back your stockholders.

Either way, it seems quite unlikely that existing FM broadcasters would be very happy about making large numbers of AM stations technically equal or superior to their existing properties.

Of course, many large groups do own considerable numbers of AM stations. Some of them are quite successful, despite the audio quality, which only confirms my suspicion that people listen to radio for content, not fidelity.

Muzak in Phoenix is
broadcast on 4 frequencies in the 900Mhz band.
Four channels for differenct music tastes.
A police scanner picks it up nicely, though
not in stereo.

The eyes are the most affected part of the head as they contain more water. Just as heating food in a microwave... Food with more water in it heats faster and better, something with no water in it doesn't heat up at all. With RF it is the frequency that is important. Cell phones are dangerous as they operate with the same microwave frequencies that microwave ovens use to cook your food. Older 49 Mhz cordless phone are much less of a concern.

Microwaves resonate at the molecular level.

Also in the "unaltered" versions of certain films ... usually carried on Chs. 2 and 44 in the S.F. Bay Area.

In case anyone wondered the identity of the (AM) radio station which allowed usage of the specific words and phrases (in proper context, of course) which were mentioned in the early part of this thread, it was KGO/810, an ABC/Disney property, and the #1 station in Northern California for the past 20 years.

They do not. Cell phones and microwave ovens are not even close in
frequency.

> Older 49 Mhz cordless phone are
> much less of a concern.
>
> Microwaves resonate at the molecular level.

Technical gibberish. Microwaves don't resonate.

Molecular bonds resonate. Some bonds resonate at microwave
frequencies. Many resonate at UV, visible light, and infrared
frequencies.

To be safe, we should turn off all our lights and sit in the dark.

I'm not convinced that cell phones are dangerous. While I might agree that the frequencies the common cell phone operate on (800 mhz.) will produce tissue heating in the eyes and other equally sensitive areas, I haven't seen any evidence to support any "real" lasting negative affects. The output powers of an 800 mhz. phone can approach the 1/2 watt level at full ouput, however this power level is generally never maintained as there are numerous cells throughout most cities which, according to proximity, instructs the phone to lower it's power considerably.

The PCS phones are the units that operate nearest the microwave oven frequencies but the output power of these units is so low that, in my estimation, it's insignificant.

In scanning the results of several studies I find, what I consider, a rather remote possibility that any of these phones are responsible for health troubles.

Check out the Australian Govt CSIRO report on
this kind of effect:

http://www.electric-words.com/cell/csiro/title.html

Sections 2.4.1 and 7.1 describe something similar.

Others have reported "hearing" microwaves which
were broadband or pulsed. If you
think the report fits what you experienced, I'd be interested
in any details you (or buddies) can recall: Length of

time before hearing it, did the sound vanish as
soon as you left the area? How big was the antenna?
How far away? (please, nothing classified)

I call this kind of
effect a temporary "tinnitus", because the "sounds"
caused by the radar are reportedly similar to those
experienced by tinnitus patients; however, real tinnitus
usually only occurs after a physical injury causes
damage to the inner ear.

Thanks for the link: I had not visited this site for
over a year.

I could barely read the tiny graphics, but I believe the
AF dosimetry handbook I referenced in my paper
covers the same material (and more).

These standards actually are under revision, because they
don't apply very well except to narrow-band, tuned
transmissions. You should read

http://xxx.lanl.gov/abs/physics/0102007

for details. The OSHA approach, to the extent I
understood it, actually is not sound
scientifically, but it has worked in the past
fairly well--mainly, I think, because there was not
much variety or diversity in the transmitters to
which the public might be exposed.

Chuck,

I confess I know next to nothing about marketing other than being a victim of it.

It seems to me that sales pitches can't do any good unless someone can hear them.
Out here, the FM stations are at a very distinct disadvantage compared to the AM
stations due to signal propogation...or lack of it. The nulls are deep and
persistant. I soon switch to AM broadcast where the dial remains for the duration
of my travels. How many commercials am I going to hear from those FM only
"hawkers"?

Perhaps now that digital would present a very viable medium on AM, maybe it could /
should be considered the primary outlet for programming.

My microwave works at 2,450 MHz. My analog cell was 806-896 MHz. My digital works somewhere between 1,800 and 1,900 MHz as pulses of power.

2731. Best portable AM radio?

Newsgroup: rec.radio.broadcasting
Date: 2001-07-31 17:39:05 UTC
From: ben hogland <benhogland@hotmail.com>
Message-ID: <tmdr9pe2qur14f@corp.supernews.com>
Source record: 13791

I'm not sure this is the best newsgroup to post this question so first of all, My apologies if this is considered off-topic.

I'm looking to by a radio for camping. I actually already have one but it sounds somewhat tinny and the batteries don't last long at all. I've heard the CCradio is good but haven't talked with anyone that owns one. What are the best portable, battery powered AM or AM/FM radios for long distance reception, sound quality, AND battery life/consumption? My current Sangean ATS-909 is great for short-wave, but like I said, it sounds tinny and uses a set of batteries in two days plus I generally only listen to AM/FM anyway.

TIA,

Ben

GE Superradio III outclasses everything, sound- and battery-wise both.
About $40 is the cheapest they seem to sell. Dial calibration is
awful is about the only complaint.

The CCRadio eats batteries and has muddy sound, and is slightly
less sensitive than the SRIII by my test.

For a shirt pocket radio that is very sensitive for the size
and with good battery life earphones, the Sangean DT200V is a best
buy at around $59. Note _not_ the later Sangean DT300VW.

If you want the very best daytime AM distance, get a Radio Shack
MW loop (about $25) or Terk MW loop (about $40) or Select-a-tenna (about
$60), all work the same. These let almost any AM radio hear right
down to the noise level by improving the impedance match. It helps
sensitive radios less because there's less distance to the noise
level, but it's still worth the money.

The CC Radio is indeed an excellent unit for long-distance AM
reception. IMHO it's way too expensive.

The GE Superadio III gives you almost the same DX'ing ability with
much better audio quality and a reasonable FM section, for less than
1/3 as much money. Battery life is outstanding--well over 2,000
hours on a set. I've had my SR III for years and changed batteries
only once. What you give up is digital tuning--the SR III's analog
dial is not especially accurate (and accuracy varies from unit to
unit). The SR III is also quite a bit larger, which may be a
consideration for you.

YMMV. Hope this helps.

2748. "Sports" theme music

Newsgroup: rec.radio.broadcasting
Date: 2001-08-01 00:49:38 UTC
From: ole_kingfish@yahoo.com
Message-ID: <tmekh2b98ejtd9@corp.supernews.com>
Source record: 13710

I'm looking for some music to use as an intro and theme for a weekly football segment I'll be doing on my radio show starting in a few weeks. Since this is being done on my own initiative, I have no "budget" for it, and will have to fund whatever I use out of my own pocket (so no specially commissioned theme songs, etc. :-)

I used to have a couple of good sports themes on a set of sound effects albums (and yes, it was THAT long ago... they were LPs), but they have long since been lost.

Any suggestions and sources would be appreciated.

> While I might agree that the
> frequencies the common cell phone operate on (800 mhz.) will produce tissue
> heating in the eyes and other equally sensitive areas, I haven't seen any
> evidence to support any "real" lasting negative affects.

Of course not, cells phones have not been widely used by the population long enough for damage to occur. Smoke a pack of cigarettes every day for 10 or 15 years and see if you drop dead of lung cancer... unlikely, but after several decades we finally have the proof of what everyone already knew anyway through common sense logic.

> The output powers of an
> 800 mhz. phone can approach the 1/2 watt level at full ouput,

Which is strong enough to travel miles to a cell site, yet is only a half inch from your head.

> The PCS phones are the units that operate nearest the microwave oven frequencies
> but the output power of these units is so low that, in my estimation, it's
> insignificant.

It would be insignificant if it could only reach a cell site 10 feet away instead of miles.

> In scanning the results of several studies I find, what I consider, a rather
> remote possibility that any of these phones are responsible for health troubles.

There were many like you that somehow could not comprehend how breathing cigarette smoke into one's lungs could cause any health problems either, and decades ago there was no proof either, because it takes decades for damage to be extreme enough to cause death.

Why be the lab rat today?

That's because of the hot sparks.

A better test would be some dry crackers or bread, compared to a glass of water. See which gets real hot. The more water content, the greater the effect. If you put your head into a microwave oven, your eyes would explode before your skull or teeth even got hot.

>They do not. Cell phones and microwave ovens are not even close in
>frequency.

Cell phones (GSM) operate at 1.8 or 1.9 GHz. Microwave ovens
use around 2.5 GHz, so they are close.

It is true that the greatest biological danger of RF energy
is to the eyes, especially as cataracts can develop in the
lenses which are prone to localized heating. (Of course that
takes much more energy than a cell phone produces.)

There is very slight and measurable heating of head tissues from
cell phones, but the mass is so big that nothing approaching
dangerous levels of heating (50+) seems possible, especially at
any significant depth. It can be that reflections off bone
structures causes a non-uniform heating where some points are
hotter than others, but very unlikely to the point of doing
damage. I read an interview with a scientist who has done
hundreds of experiments with human volunteers and microwave RF,
and who says as the only appreciable effect is a comfortable
warming, she feels it could even be a good way of providing
winter heating (if it wasn't so impossibly impractical/unacceptable).

When you place these items in a microwave, you get a high standing wave ratio inside the oven's cavity, which is tuned for the frequency of the oven. Placing a metal object (even a small one) in the cavity corrupts the tuning of the cavity and creates a high standing wave ratio. This causes the arcing that you get as much of the RF energy is reflected back to the magnetron.

This was 50 years ago.
I was in "basic training".
While it was ODD, and even the instructor commented
on it, there was no way to ask questions even if had the energy.
While my basic was not the horror I have often heard of,
it was not a picnic, and the first thing you learned was to shut up.
We were moved out of the area, "double time" and allowed the unheard of
rest period. We did nothing for 4 hours. The sargent was plainly
"freaked out" by it.
It was just a buzz. Sounded like it came from between my ears.

I have tinnitus and this is very unlike the buzz that I "heard".

I suspect the best source of info would be the techs who installed
and worked on this gear.
I think it was in 400MHz range and the power was likely very high.
Pulsed high KW or even MegaW. I have talked with one tech and he
mentioned that it was common for the techs who worked on those beasts
in the artic to warm themselves by standing in a side lobe.
He mentioned the buzzing and though it was funny.
I thought him (and anyone who would warm themsleves this way) to be pretty
stupid.

>Perhaps now that digital would present a very viable medium on AM, maybe it
>could /
>should be considered the primary outlet for programming.
>

It might. I'd personally be in favor of a digital AM band service if it can be made to work. I'm not sure that existing FM broadcasters feel the same way. For reasons I've already stated, I'm in doubt that digital AM will come to pass, and if it does, it may not a the "cure-all" we'd like it to be.

First you must have consumers who are willing to pay for the improvement. You also have to have a single standard dictated by the FCC (which we could get). Otherwise, it will be doomed to failure like AM Stereo, which like the Betamax was a very good product but not well acepted by the public.

Even if we do get digital AM, I'm not sure that it will help in deep fringe areas. It is my understanding that in the IBOC system, the coverage area for the digital signal will not be as large as it currently is for the analog signal. There are also interference issues to be delt with which may actually cause your fringe area reception to deteriorate rather than improve. I'm not sure anybody really knows the answers untill it is actually tried. One experimental station at NAB is not representative of the possible situation you'll experience when several nearby stations are using this technology simultaneously.

Of course, there are competing new mediums as well, most notably by satellite. I understand the roll out will start early this fall in Dallas and other areas. If people are going to buy something new, which one (s) will they buy? Traditionally, not every product rollout has been an overnight success.

I'm not at all against progress, but sometimes many new ideas seem to be answers to questions that nobody has asked. It will be interesting to see how it works out.

For sound quality in a portable, few if any sets match the GE Superadio.
It isn't small, but it's impossible to get good bass response in a
really small box like the 909 or CCrane. The Superadio RF performance is
also good, though the dial leaves a bit to be desired. It uses large
batteries so they last a long time.

The Surperadio is pretty hard to find at a reasonable price. You are
likely to have to pay $60 or more, though they sell for about $40 in
discount stores if you can find one.

I suspect that the CCrane will sound no better than your 909, maybe
worse.

I don't think that it is a given that IBOC digital on AM will work very well, especially at a substantial distance from the transmitter. It may well have to use the same technique as FM IBOC - and switch back to the analog channel once one is some distance from the the transmitter.

What we do know is that AM IBOC digital wipes out reception on the first-adjacent channels. This was obvious from the test on WLMD in Laurel, MD. Their 1 kW on 900 kHz wipes out stations on 890 and 910 at my house about 14 miles from WLMD, day and night.

But why be a total nincompoop either. In spite of being next to your ear you do not have the moxie to do cellular (the body cells, not the verdampter phone) damage. Do it for 10,000 years and all you get is cauliflower ear. The whole thing is a crock.

If you ever have an old microwave that you are going to toss, put a penny on
the glass tray. I saw the microwave in a break room melt a hole through
the glass deck. I do not know the melting point of tempered Pyrix, but it must
have been hot. They replaced the glass and the oven worked for anohter 15
years. It was still working whne I retired. There was no arcing, but the penny
did glow red from the heat.
Now a small flourescent lamp in a microwave is a real sight.
And CD-ROMs cook up nicely also.

> logic.

Okay, pet-peeve time. Appeals to common sense
are worthless as an indication of truth or falsehood
in scientific matters.

Once upon a time, it was common sense to think the Earth flat,
that heavy objects fell faster than light objects, and the sun
actually rose and set and orbited the earth. All are false.

As recently as the last century, it was considered
"common sense" that the Earth was only about 6000 years
old. In modern times, we know better, but even in
modern times we believe all kinds of goofy false things.

For example, today, there are a lot of people who believe that gravity
just stops once you go into space, which is why you are
weightless. They also believe rockets
lift off the ground by pushing against the lauch-pad, and that
the speed of two objects approaching head-on is simply
the sum of the speeds of the two objects added together.
-- ALL of which are FALSE.

My point is not that cellphone risks are not real, but
that using an appeal to "common sense" in a matter
of scientific uncertainty does not hold water.

The actual risk of cellphone use have nothing to do
with whether people think they're dangerous.
It also doesn't follow that if exposure to large
amounts of radio energy is harmful, then exposure

to small amounts is also necessarily risky.

> > The output powers of an
> > 800 mhz. phone can approach the 1/2 watt level at full ouput,
>
> Which is strong enough to travel miles to a cell site, yet is only a half inch from
> your head.

I suppose you believe that more powerful radio signals travel farther.
This is simply not true. All electromagnetic energy travels outward
forever. The distance you can hear the signal depends
upon the sensitivity of the receiving equipment and noise levels,
not just transmitter power. With the right equipment,
you can hear a 10 watt transmitter from a space probe
orbiting Jupiter. With the wrong equipment, you might be
hard-pressed to hear the same transmitter across town.

It's not signal the range, but the local field strength which determines heating and
risk
factors. And to argue the other side of the coin, it is so hard to tell about risks
at low exposure levels, that there might actually be a slight risk with a super-low
power
cellphone.

>
> > In scanning the results of several studies I find, what I consider, a rather
> > remote possibility that any of these phones are responsible for health troubles.
>
> There were many like you that somehow could not comprehend how breathing cigarette
> smoke into one's lungs could cause any health problems either, and decades ago there
> was no proof either, because it takes decades for damage to be extreme enough to
> cause death.

This analogy isn't too good. Autopsies (of soldiers in Korea and Vietnam, if I recall
correctly),
showed clear signs of tar and damaged lungs that could be rather clearly linked to
cigarette
smoking. It will be much harder to find such a "smoking gun" when there is no tell-tale

direct damage, such as burned tissue where the cellphone was held. Instead, you need
to argue statistically about elevated risk factors. And there are so many environmental

risk factors due to toxic chemicals, dirty air, second-hand cigarette smoke, contaminated
drinking water, etc. etc. to be very sure of anything without a huge controlled sample size.

So the question becomes: how much added risk is acceptable? If using a cellphone raises your cancer risk 0.00001%, I'll take the chance. If it's 50%, I wouldn't. Can anyone produce figures on this today?

>
> Why be the lab rat today?

Because maybe they want to stay in touch and are
willing to take what they consider a small added risk
to do it. Maybe we'll regret that decision someday,
maybe we won't.

2764. Re: Best portable AM radio?

Newsgroup: rec.radio.broadcasting

I like the GE Superadio, available from Bennett Brothers. It is a large mono AM FM radio that has remarkable AM sensitivity and good sound. I will shortly be selling them "over the air" on my AM station, in order to get some good radios in listeners' hands. Downside - the radio drifts somewhat with temperature, and the dial calibration is poor. Battery life is phenomonal, with six D cells.

From what I have heard, the CCRadio has HORRIBLE audio quality -- even
a telephone sounds better.

For well-rounded AM reception, the GE Superadio III is hard to beat, and
its Radio Shack/Optimus "Extended AM Range" clone is almost as good.
With either of these radios, you not only get superb reception, you get
unmatched audio quality -- switch it to "Wide" mode, and you'll think
you are listening to FM! The sound is very high-fidelity compared to
the average AM radio, with crisp highs, full bass, and very low distortion.
If you ever listen to music on AM, you HAVE to get the Superadio or the
Optimus -- you'll truly be amazed at the improvement in audio quality.

Of course, for the highest fidelity on AM, you'll need an AM STEREO
receiver, but unfortunately the one commonly-available AM Stereo radio
(the Sony SRF-42 AM Stereo Walkman) has been discontinued. Nevertheless,
many domestic cars and trucks are still equipped with AM Stereo radios,
and if you're adventurous enough you can add AM Stereo capability to
any good radio through the use of a "decoder" circuit board, available
through the Official AM Stereo Web Site at http://www.AMStereoRadio.com/ .

But whatever receiver you use, get a tuned loop antenna -- like a
Select-A-Tenna, Terk AM Advantage, or even the $29.95 Radio Shack model.
Position it just right, and the improvement in reception is simply
amazing -- sensitivity and selectivity are both improved *drastically*.
It won't pull signals out of thin air, but if the signal is there, a
tuned loop antenna will make it louder and clearer, and will reduce
interference from adjacent stations.

Does anyone in this newsgroup have any information concerning the whereabouts of former network radio and television announcer Hugh James? After leaving New York he lived in the Fort Lauderdale area and did some air work in Miami. Thanks Dave
>>

I've been here in Ft. L since 1986 and can't recall the name. If you're serious call AFTRA/SAG in Miami. They probably have a listing on him.

You want a sensitive AM/FM radio for DX'ing? You need a GE SuperRadio II or the Panasonic RF1401-D. Both of these radios blow away that Super Radio III. GE took a step backwards when they discontinued the SuperRadio II. Both of these radios have great fidelity and run on D cells that last. Watch for these units on Ebay. It will be well worth the effort.

Agreed. I have had a GE SuperRadio of some stripe for the past 10
years or so...or however long they've been selling them. I can live
with the dial calibration problem, which seems to be different for
each unit. Nothin' beats it for performance...even if you're not
struggling to pick up Don Imus from a distant station. ;)

>For a shirt pocket radio that is very sensitive for the size
>and with good battery life earphones, the Sangean DT200V is a best
>buy at around $59. Note _not_ the later Sangean DT300VW.

Definitely. This model is also sold by Radio Shack...I forget the
catalog number, but it's the black one with digital tuning and TV
audio, NOT the gold/silver smaller one with the same. The Radio
Shack version, unlike with their SR III clone, is the exact Sangean
model under the RS nameplate. (DON'T buy the SR III clone! But the
DT200V IS the same in RS nameplate.) I also have replaced the
built-in belt clip with an attached "THE CLIP" because the belt clip
snaps off too easy.

I've been nitpicking the details of some of the postings on this topic,
but actually, I'm pretty skeptical about the safety of any RF. I'm not

swayed by studies that address the more obvious possible effects, like heating. I understand the technical differences between EM radiation and ionizing radiation (I work in a laboratory with radiolabeled compounds, and am trained as a Radiation Safety Officer), but I don't accept many of the conclusions drawn from that distinction.

I believe any RF may cumulatively cause undesired effects. Like many, I accept the tradeoff when I have control over it, and I don't accept it when someone else has control.

What it comes down to is, if no one complains about it, then they can get away with it.
>>

Tonight, Brian Copeland, an African-American, as substitute host for KGO's Bernie Ward, enumerated just about every variation of the "N word" I've ever heard, plus a few I hadn't.

Copie also used the "N word" itself at least 100 times.

When challenged by a caller that the "N word" was one of the "prohibited seven", Copie replied that he was African-American, and he was free to use whatever word he wanted, including the "N word".

Even if there had been complaints, a word of whatever kind, used in proper context and in a legitimate story (and not just for whatever shock value it might provide) is an adequate defense.

People once complained about S.F.'s Chs. 2 and 44 playing films which included the "F word", and the complaints went nowhere as the subject films were rated appropriately by the MPAA, and the films were aired in an appropriate time slot.

What exactly are the frequency response specs for AM IBOC or AM full digital for that matter? I have seen a lot of people talking about how AM IBOC or full digital will compete with FM fidelity wise, but I really don't see that happening. Audio is much harder to compress than is video. i.e. the reason that they can put several digital video channels on a single analog channel space is because of the MPEG-2 compression scheme.. which works because when video is digitized, more than 90% of the information is removed because it is redundant. Audio is not this way, the waveform is constantly changing along the timeline. The mp3 compression scheme for instance allows for a good quality stereo signal at 128 Kb/s (CD quality), which would require an FM channel of about 300 KHz including guardbands. For FM quality (64 KHz) they could use the existing channels, and still have room for the narrowband SCA type feeds they offer now. Using a normal AM channel width, one could only use a 4.5 Kb/s digital signal, which would sound much worse than the present analog signal. I don't know what sort of compression scheme IBOC or full digital AM would use, but I doubt they could compress it much more than mp3 does. Please fill me in. :)

Hi Devon,

Sorry it took awhile to reply but I was reading and posting to this thread in the broadcasting ng and several of the replies here didn't make it to that ng. I just happened by here and saw your reply.

The ills of cigarette smoking were known well before anyone had to do a study. The information was squashed by big money. I don't believe the same is true of the studies regarding cell phones.

The cellphone manufacturers of the 80's would have been remiss in not authoring technical research into the hazards of electromagnetic energy before producing the devices. I would be very surprised if the manufacturers hadn't run this stuff past their lawyers and insurance companies as well.

In the debate of rf affects (in paticular cellphones) on humans, I choose not to play alarmist. I liken much of the anti-rf propoganda to those studies wherein lab rats were overdosed on a substance to a ridiculous degree and proceeded to get a cancer or some other disease. Think about it. First we had the saccarin scare then the eggs scare, following that it was the red meat scare. Now, sacarin's ok, eggs are found to be ok, well done meat is now no good for you and medium rare is ok.

While I agree that rf can produce the reported tissue heating in prolonged concentration, this concentration is almost never achieved in practicalities. As I said before, the ouput power levels are generally set low in areas of multi cell coverage. Also, the phone is never in "view" of your eyes for more than a few seconds worth of dialing and this is usually at a distance of a foot or more.

Each manufacturer is researching antenna and case designs to modify the radiation pattern to exclude the head and eyes in an effort to minimize bad publicity and scare mongering moreso than any real health issues.

Latest reports of cell phone health issues surmised the greatest damage occurs in the first ten minutes of ending the call. This is when the user is most preoccupied with the content of that call and finds him/her self in an accident.

We've had previous decades of time to perform studies on rf energy and humans. We've had how many years to study the effects of hi power AM broadcast frequencies and hi power FM broadcast as well as hi power television? What about the effects of very hi power 60 hz. power line energy?

I think if you wish to be anti rf about something, these would be a better place to begin your research and extend your alarmist reactions.

Curious if anyone has ever run across a website that lists what songs were played on the radio and when? I'm always hearing songs on the radio that I have no idea how to find the band or song name. Thanks for any help. -Craig

The OSHA approach is in no way scientifically valid, but it's felt that it's of benefit to be as conservative as possible in the absence of real data, and I can understand that. I don't like it, but I can understand it.

There is plenty of anecdotal evidence that high RF levels don't have any acute damage issues until tissue heating effects become significant. For example, I know a lot of folks who regularly climb active AM broadcast towers, and I shared an office with a 50 KW Continental AM transmitter for a while which had enough local RF leakage that you could remove the fluorescent tubes from the ceiling lights and they'd continue to glow at close to full brilliance. Nobody was harmed.

But, I don't think there is any decent evidence regarding chronic exposure at all, and this is made worse by the fact that there is a tremendous range of frequencies involved. X-band and AM broadcast behave very differently and the biological effects are going to be substantially different.

We do see long-term studies of people who work around high RF levels but on the whole these are useless because of the number of confounding variables. For example, the folks in the office with the Continental in it mentioned above were also prone to wade around in the modulation transformer tank and get covered with PCB-laden oil during the annual maintenance. This sort of thing makes it hard to separate effects.

I did work once at a radar laboratory in Atlanta where one of the techs claimed to be able to hear microwaves, and with a quick A/B test it was clear that he could tell when he was 20 feet downrange of a 5 MW ERP radar by sound. It turned out that the sound he was hearing was due to internal heating effects causing his skull to expand. These people are professionals; don't try this at home, kids. When you start getting secondary heating effects, the rules change.

Oh yes, and don't forget electrical effects due to internal rectification of RF, as with people who can get AM stations on their fillings.

Keep in mind that most all of the wavs or mp3s that you'll find on the net
are for "personal use" only and are (nudge nudge) not for broadcast.

Anybody would see 'stars' after holding a handheld up and squeezing one of those too-darn-stiff Push-To-Talk buttons for a "prolonged period". Since the friend-in-question is a newly licensed amateur, it seems likely that his thumb hasn't been "broken in" yet (one advantage of learning Morse Code first ?).

Try switching to low power for a while - if it makes a difference which can be repeatedly demonstrated in a double-blind test, then someone will probably be getting a Nobel Prize.

de VE1BLL@rac.ca

"A correpondent has mentioned that a friend who recently obtained an amateur radio license says that he sees 'stars' when he operates his 4W handheld transmitter for prolonged periods with the antenna close to his head."

Those who worked with radar were warned of possible cataracts developing after exposure to RF leakage from waveguides; don't know of any individual who suffered such effects. Note: Radar wavelengths are measured in centimeters; 3 cm are common, freq. 10 gigahertz. . . (New subj) About 20 yrs ago the FCC came out with a warning for those who worked within 1/4 to 1/2 mile from UHF TV transmitting antennas, some radiating up to 5 megawatts erp. They are in the same freqs as cell phones. Consider 5 megawatts at 1/2 mile might be comparable to a fraction of a watt next to your ear; but it is the duration of exposure that is important==Ted Shireman

The latest edition of the STAGE LEFT webcast went on line today (August 1). You can listen to it any time with RealPlayer at http://www.stageleft.org or http://www.kdhx.org/listen.htm Please send me a note with your comments at chuck@stageleft.org

This week it's a celebration of villainy on the musical stage, with songs from (among others) "Pal Joey", "The Lion King", "Beauty and the Beast", "Damn Yankees", "Kismet", "What Makes Sammy Run" and that BadFilm classic "Can Heironymus Merkin Ever Forget Mercy Humppe and Find True Happiness?"

You can get both the current episode of STAGE LEFT and the last four shows at http://www.stageleft.org or http://www.kdhx.org/listen.htm. This week's play list is at http://www.stageleft.org/010801.html

Next Week (8/8): "The Grand Tour" - a virtual tour of the world, from the capitals of Europe to the Far East to The Mystic Land of Egypt.

I hope you all know the Eugene V Debs was a damn pinko commie! The station WEVD in NYC was named in his "honor" As a Jewish semi-retired broadcast engineer I am embarassed that a fellow Jew could be such a traitor.

I know it is "politically incorrect" now to dare be critical of even the enemies of our society but I will take the chance.

Incidentally I was offered a chance to buy WEVD 1330 AM for 3.5 million which is a steal for a 5 KW fulltime AM in NYC. The transmitter and three towers were located in Statan Island, a boro of MYC on 11 acres. Self supporting towers, may I add. I would guess that today the land alone may be worth several million dollars.

Meyer Gottesman

Yes, it takes a larger ferrite loop to get better sensitivity.

BTW, about 6 months ago I heard a rumor that a digitally-tuned successor to the Superradio was in the works. I wonder where it went. The Superradio strikes me as a "third-world" radio, designed to perform well and sound good as a family's _main_ radio in places where sigs are not very strong and there are no power lines to plug into. If true, thast means that a digital replacement would have to accomodate both 9 and 10 kHz AM spacings, and 50 kHz as well as 200 kHz FM steps. Some Caribbean AM stations are on "5 kHz" channels, ie: 535, 885, 1605 kHz, etc.

2797. Meyer Gottesman - Does not like Eugene V. Debs (RIP)

Newsgroup: rec.radio.broadcasting

From: Meyer Gottesman <wrecktech@yahoo.com>
Message-ID: <tmr9ncqqeocff5@corp.supernews.com>
Source record: 13658

Dear Mr. Rubin:

As a possibly fellow Jew, I want to remind you that Eugene V. Debs (WEVD) was a communist and as such should be an embarassment to all good loyal American Jews who support Democracy as a way of life. How this pinko creep got a station callsign puzzles me.

My good lady friend here in GA would say I am being "hatefu" but I am sorry but I have nothing good to say about EVD. My late Grandfather (An Orthodox Jew born in the Soviet Union) listened to the station in the 50s since it was in Yiddish language.

I was recently CE for an AM in NYC by the way. I am a ham 51 years and a semi-retired radio engineer.

I know it is not "politically correct" these days to dare even speak badly of the bad guys but I will do so!

Cordially,

Meyer Gottesman

PS I put EVD in the same boat as the traitors, the Rosenbergs. Remember the Jewish spies. I am ashamed!

They don't care so much about ratings. They just want clearance for ESPN Radio's programming. Except for weekend snippets and MLB and NBA games on WFAN, this is not the case. In addition, 1050 will air the Yankees and Devils games and I would imagine they would add the Nets when their deal with WOR expires. (YankeesNets also owns the Devils.)

Microwave hearing is a well documented effect; my interest
in starting this thread was in visual effects, but any
info is appreciated.

Question: On what basis did you conclude that
"It turned out that the sound he was hearing was
due to internal heating effects".

I'd be willing to bet it was not on the basis of
any evidence at all, but on the basis of speculation
from the 1950's by someone who did not understand
how to compute anything but the heat from some RF!
There is whole batch of such papers in the literature,
and in my opinion, they are very likely wrong.

You should read my http://xxx.lanl.gov/abs/physics/0102007

Don't misunderstand me: At that time, heat was as good
a guess as any; but, how likely was it that some parts of
his skull got so hot they expanded a little, and
then suddenly cooled off, so that the two responses
(heat up + cool down) caused an auditory "click"
maybe a millisecond wide?

Where did the temperature difference come and go
from? Why did he hear the effect instead of
feeling it or seeing it?

These are admittedly rhetorical questions, and I can't
answer them. But I'd like to be able to do so.

I heard him on voice track intros and promos for WINZ Miami/Hollywood in
1980.

He had been the announcer on NBC's radio and later TV "Voice of Firestone"
and Sunoco's "Three-Star Extra," a radio news show with 3 reporters.

Some years ago United Airlines in-flight entertainment audio ran some big
band broadcast clips. One was a 1940 Glenn Miller NBC broadcast from the
Glen Island Casino, NY. The announcer was Hugh James. He had a nice sound.

If he was doing NBC band remotes in 1940, he probably was at least in his
mid 20's. He would have been born in about 1915. That would place him is his
mid or late 80's today...if still living.

2804. Rick Miller fired in Seattle

Newsgroup: rec.radio.broadcasting

Seattle talkradio fans must know by now that Rick Miller got fired this week. Miller barely lasted 7 months before KOMO decided to give him the boot. Have not heard any details on the firing but it was probably because of piss-poor ratings.

I liked tuning in ocassionally. It was perversely enjoyable listening to his trainwreck of a show as he babbled interminably about some inane topic;desperately casting about for callers. You could almost hear the crickets in the background. Lemme know if you hear anything more.

If its truly a special, it may be pretty good. Welk syndication has
been a mainstay of some PBS stations, who pretty much had a lock on
the Paxson programming midset 'til Pax came along.

The Welk show was such a mill, that they had some brilliant arranging
and great musicianship, and they had some of the most insipid stuff
ever broadcast. The insipid is what we all laughed at, so hard that
sometimes we missed the brilliant.

>accept many of the conclusions drawn from that distinction.

Which reminds me, there have been some studies using non-ionizing EM
on cancer cells (I think). They showed that some cells can grow better
or worse depending on the frequency and waveform. I think they got
something to crawl out of the test tube after exposing it to sawtooth
waves, but again I would have to check that out to be sure.

>I believe any RF may cumulatively cause undesired effects. Like many, I
>accept the tradeoff when I have control over it, and I don't accept it

I'm surprised that no one in this thread (at least in r.r.sw) seems to have mentioned the growing body of medical studies reporting damage to DNA from irradiation of tissue at UHF frequencies commonly used by cellular telephones. At least some of this work was funded by CTIA itself and then repudiated, according to the medical director responsible for the research, a Dr. George Carlo.

While I'm not taking a position - indeed am probably not qualified to take a position - on the quality of the studies or the validity of various conclusions drawn from them, it seems clear to me that a plausible chain of causality has been established between non-heating exposure to UHF and carcinogenesis, which is something the Wertheimers, Leepers, and Beckers of the world were never able to demonstrate amid the mid-'80s furor about childhood leukemia and high-tension 60Hz.

As you point out, frequency is critical. But UHF is close enough to radar frequencies for results such as these to lend some credibility to the (perhaps anecdotal) epidemiological results we've all heard linking microwave exposure to the incidence of leukemia and other cancers. At least as far as I am concerned.

I don't know about any current plans for a digital version of the GE Superadio... but in 1983 they actually had a digital version on the market, called the Superadio Plus.. I never had the opportunity to buy or test one of these radios, but would love to find an old one just to see how they measure up to the analog Superadio (SR-I, their contemporary). They were a nice looking radio, but no idea if they were even close to the sensitivity/selectivity of the SR-I..

http://www.amazon.com

I know the question was about AM reception, but the Superadio's FM section is no slouch, either. Mine picks up a distant high-school station without even extending the antenna. And, for when you're not out in the woods, the Superadio is also one of only two radios I've ever been able to use at home (near a busy tower) with no front end overload problems at all.

Incase noone has pointed this out yet, the site once known as the MIT
List Of Radio Stations on the Internet, now known as radio-locator, is
reachable at <URL:http://www.radio-locator.com/>.

http://www.starcd.com/ might be what you are looking for. Provides access from a web site, WAP phones, plain old cell phones in many markets, and email. CAVEATS: Some functionality on their web site requires JavaScript; StarCD is currently out of service in most markets; *CD only covers the top 30 or so markets anyway at this time.

http://www.emarker.com/ is a venture by Sony that combines the use of a really silly-looking keychain-size device known as an "eMarker" that costs $20 or so and records timestamps (I think that's all it does, basically!) with proprietary software for Windows 98/ME/2K or Macintosh that requires registation on emarker.com.

Strictly speaking you don't *need* the eMarker keychain device or the software; you can also simply register then log in to the site with a browser that has the Flash plugin installed. The Flash interface is quite flashy and *painfully* slow on my Pentium 166 Linux box though. I wonder if anyone has yet reverse-engineered it.

From: ben hogland <benhogland@hotmail.com>
Message-ID: <tmtmq9equsbff2@corp.supernews.com>
Source record: 13688

Thanks to all who replied. Thanks to the feedback here, I have decided on the GE Super Radio (which I've never heard of until now).

I did want a digital tuner but I guess I have to give a little to get a good radio.. The Price is right on the super tuner too. One reason why I like a digital tuner is because I also use a select-a-tenna and often try to pull in long distance stations while out camping. When the station does not come in at all without a select antenna, and if the analog dial isn't calibrated correctly, it's really difficult to tune in distant stations because the dial is set incorrectly either on the radio or the select-a-tenna.. At least with a digital tuner I can set it to 710 AM and know it's at 710 AM then tune the select-a-tenna.. But with a good radio like the Super Radio this may not be that big of an issue as I should be able to pull in week stations even initially without the select-a-tenna..

Again, thanks.

The key words are sister stations. Her in Nashville TN; WWTN and WSM AM and FM are owned by Gaylord. They carry Nascar, the Nashville Preditors and Vanderbilt football. Vanderbilt football is broadcast on WSM-AM except on Friday and Saturday night when WSM hosts the Grand Ole Opry. Then it is broadcast on WSM-FM.

WWTN broadcasts Nascar and the Preditors. Occasionally, their may be a conflict and Nascar will be moved to WSM AM or FM depending on the day of the conflict. When this happens, WWTN will tell every one that they can hear Nascar on their sister station.

CBS and Fox are not sister networks.

No, more like CBS telling you to watch TNN, or Fox telling you to watch FX.

I do recall seeing promos in the late 70s for the CBS Saturday morning kids' lineup during afternoon kiddie shows on an independent station. (The promos did not mention the affiliate's call sign, just the channel number.) This worked since the indie in question was counterprogramming for adults during the Saturday morning slot.

Interesting. I'd imagine that they were battery hogs, at least compared
with the analog-tuned model. The technology has probably improved
enough since 1983 that a digital version wouldn't have to eat batteries
as fast these days. We can hope.

Nielsen did radio ratings back in the dark ages, but had problems competing with and making a
profit when Arbitron had the lion's share of the pie. If CC throws money at them, they will crank
up the software and hardware. They have all the stuff to measure audiences in place.

Copeland is indeed a comedian. And a good one, too.

He's "opened" a significant number of "A List" acts.

Copie purpurtedly played his satire "Jay Tallahassee: The Most Paranoid Black Man On Radio" for the last time on Bernie Ward's program, on which Copie was a guest while Ward was on vacation.

Then two days later, as a guest on Ronn Owens' riday program, Ron played "Jay Tallahassee ..." again.

Ronn has placed "Jay Tallahassee: The Most Paranoid Black Man On Radio" on his web wite, for download.

"Jay Tallahassee" implicitly refers to Ray Taliaferro.

Only if CBS owned FOX.

Guess that they realize some listeners switch formats every few hours.
"Had enough oldies, think I'll tune in country". Try to steer such
listeners to one of your other stations in your town.

You are correct R.F. Breath.

However the bluff was in "funding" other services.

While working for Birch years ago, we were very heavily monitored and regulated. Even with radio deregulation since, it would be virtually impossible for Clear Channel, or any other media outlet for that matter, to influence the service in significant way.

Although I haven't seen the "compromise", it's obvious they wanted the radio equivalent to the thirteen donut dozen.

>some station interferes with it!

I've heard some of those "ducting" E skips before and particpated in
one once. It was back in the mid 80's, I was working at 100K watt
rock station in E. Wa. and we started getting calls to our request
lines from Lincoln Nebraska. The callers seemed to think that we
were a new rock station in town. Hell, we thought of sending some
sales people back there at the time. That's a pretty big skip (over
a thousand miles) and it went on periodically for several days. It
was during a fairly hot summer in our area and also it was fairly
hot in Nebraska and at the time the Rockie Mountains had some
storm front move in from Canada, so we theorize that was the cause.

Another time I was picking up some Pheonix, Az FM stations loud
and clear near Devils Tower, Wyoming. Didn't know if it was E skip
or if the signals were bouncing down off of Devils Tower into the
campground below. Maybe someone else has this effect while
visiting Devils Tower?

It is the scientific studies paid for by the cellphone companies that keep spouting how they
are safe, and the privately funded ones, and the studies in Germany that show they are not.

It is exactly the same as with the tobacco companies.

Thank you so much for reviving good old "pinko commie." I haven't heard that term in twenty years, and we've had a good time around the pig ranch bandying that one around.

I first thought you were just trying to pull this newsgroup's collective chain and take us down memory lane, but the appeal to judaism makes me think that you're either serious or are out to start a flamewar on the magnitude of the legendary rec.pet.cats.

Now that we've seen communism pretty much fall on its ear (EVD was a socialist, but most redbaiters don't know the difference), it gives us a pretty good view of political freedom in the first half of the 20th century, and we don't fare very well.

Debs is no traitor, he held a different political belief, and in this country where we should be free to express them, he found himself, and a whole bunch of people with him, crucified by folks like Joseph McCarthy.

WEVD, WCFL, and their heirs the Pacifica stations are broadcast legacy. They are people seeing a new medium and using it to promulgate a radical new concept, and by and large they were chased off the air.

The very reason you're still so pissed off at him, is the precise reason he's so important.

Actually, it'd be more like CBS advising you of programming on co-owned UPN.
I hear the cross-promotion of other properties regularly on CC's flagship
WOAI in San Antonio.

- Years ago when I worked at WKDA in Nashville (after it had switched to country
after years of top 40 dominance in the market), we'd occasionally
cross-plug our ``underground'' [sic] FM, WKDA-FM, later evolving to AOR as
WKDF.

Source record: 13606

111TH AES CONVENTION COMMITTEE FEATURES SPECIAL EVENT ON DIGITAL BROADCASTING IN THE UNITED STATES
"Digital Broadcasting is Changing the Way Consumers View Television and Listen to the Radio"

NEW YORK, August 10, 2001-The AES 111th Convention, taking place September 21-24 at the Jacob K. Javits Convention Center, is again featuring a special event on digital broadcasting in the United States. The event will take place on Saturday, September 22, at 9:00 am and will be open to all convention attendees, regardless of badge type.

With the advent of digital television, satellite delivered digital radio, and in-band on-channel digital radio beginning broadcast, the audio community will be expected to deliver the highest quality of audio utilizing all these mediums.

"Digital broadcasting is changing the way consumers view television and listen to the radio," says David Bialik of DKB Broadcast Associates and 111th special events chair. "Today's television viewers can experience DTV (digital television) with high definition video and surround sound."

Europe and the rest of the world have adopted the Eureka Standard for Digital Radio, while United States is going forward with In-Band On Channel (IBOC). This allows for the delivery of both digital and analog signals to the listener. Additionally, the United States has licensed two companies, Sirius Radio and XM, to deliver digital audio via satellite. These emerging technologies are promising better reception.

"At the last New York convention this event was standing room only," adds Bialik. "We expect even more interest in these topics since this is the last mile in many audio productions."
The Audio Engineering Society has developed this event to familiarize the audio engineer and interested parties on the various technologies used and how these services will impact the audio industry.
Presentations by representatives from the NAB, NRSC, CEA, Dolby Labs, PBS, Ibiquity Digital, Sirius Radio and XM Radio will be featured.

For more information on this and other events of the 111th Convention, please visit www.aes.org.

2847. Best AM Car Radio

Newsgroup: rec.radio.broadcasting
Date: 2001-08-12 18:19:33 UTC
From: Emacee <emacee@nospam.org>
Message-ID: <tndi5lsgc8tn45@corp.supernews.com>
Source record: 13608

Inspired by Ben Hogland's thread: Best portable AM radio...

What is the best AM car radio? Is there a superior after-market car radio for AM reception? Are any of the various automakers' "factory-installed" radios better than the others?

Are there ways to improve AM reception on car radios: Increase sensitivity? Decrease electric noise? C Crane sells a car antenna this is supposed to improve sensitivity: Does it?

And something I've been wondering about for years: Has AM reception (in cars and generally) gotten worse over the years (or is this just my imagination)? Is the culprit poorer AM radios, or electric wires and various electric devices (or both)? Seems like I used to be able to get New York 50K AM stations clearly (about 100 miles away) -- heck, a lot of people around here even had one of their push-buttons set to WOR. Now, they barely come in. What's happened?

Thanks

Cross-posted to: alt.radio.talk,rec.radio.broadcasting

The piss-poor quality of talk radio in New York is absolutely amazing. It is supposed to be the #1 media market in the country. Except for a handful of hosts like Limelight, Hannity, Stern; NY radio is one big snooze fest.

The west coast features much better programs like Phil Hendrie, Tom Leftism, Larry Elder, Mike Savage & Rob "T-Man" Tepper. The FoxSports Radio lineup of Tony Bruno - Jim Rome - Kiley & Booms destroys anything heard on WFAN or ESPN Radio.

I thought it was a real interview too! Until he asked for an "instapoll" and had the audience call in and tell him whether "the bit" he just did was good or if it sucked. Then I realized that the whole thing was a routine. He had a lady caller there that was so infuriated with the "guest" that I thought she was going to lose it! It was the show last night when he was discussing the show "The Sopranos". I laughed my ass off! This Hendrie guy is a real wacko- very entertaining, and not afraid to step on a few toes! We hear him at night here in New Orleans on 1350 AM WSMB.

I was not aware that Nielsen ever did radio. When was this?

My timeline includes Hopper through the very early 70's, Pulse through about '78 (last book issued: San Juan, PR), Arbitron starting late 60's, Birch, Burke, limited market Willhight, Accuratings and one at the time of Burke that never got going except in pilot studies, I believe.

2852. REWARD for recording of Steve Lundy on WLS

REWARD for Steve Lundy on WLS

From:
"Wayne McAteer" <mcateers@execulink.com>

REWARD OFFERED for information leading to the aquisition
of a Steve Lundy on WLS aircheck

Help! I can scarcely believe it -- there does not seem to be a single
aircheck in existence, scoped
or otherwise, of Steve Lundy on WLS. One of the very best rockers of
all-time, in his element,
at his prime. I've looked everywhere -- including people with HUGE
aircheck collections. Can you help?

REWARD OFFERED!

Reward -- you choose! I have airchecks available, including some rare
clips that do not seem to
be "out there" -- WLS newsman Gil Grose breaks into uncontrollable
laughter; Byron McGregor
laughing so hard he barely makes it through the weather on the Big 8;
CHUM production room
out-takes. Plus, more from my collection available at
mcateers@execulink.com for the person who
can supply me with a Steve Lundy WLS aircheck (other than the very
brief breaks worked into WLS composites.

Please contact me if you can help.

Thanx ...Wayne McAteer

2853. Satellite Radio

Newsgroup: rec.radio.broadcasting
Date: 2001-08-12 18:19:43 UTC
From: chuxgarage@aol.com
Message-ID: <tndi5vkjq4sg4d@corp.supernews.com>
Source record: 13614

In the July 23, 2001 issue of TWICE, a magazine aimed at retailers and other resellers of consumer electronics, there appeared two articles about satellite radio that caught my attention.

The first announced that commissions to dealers for selling subscriptions to the service would range between $25.00 and $35.00. In case you've wondered, now you know what is in it for the dealer.

The second article was headlined: "Satellite Radio: Retailers Upbeat But Cautious."

In a nutshell, it said, "While even six months ago retailers unanimously sung the praises of satellite radio with its CD quality audio; 100 channels and nationwide coverag; now many are voicing concerns about consumer awareness, promotions and launch delays. Instead of talking about increased store traffic they are now talking about such things as "Will the programming be strong enough to coax the youth demographic into paying $10 to $13 a month?"

One quote from a retail store general manager said "I'm concerned with how many people in the United States will spend $10 per month to listen to whatever they want. I know I just reach into the back seat and pull out a CD, so I'm concerned with how many customers will sign up."

The article went on, but you get the idea.

It's interesting to get a viewpoint from that side of the fence.

I wish I had seen the original post.

The words for which you describe, are rarely considered "mature." They are generally referenced to "potty humor" or "playground humor"

In more "mature" circles, the words are not used or referenced in that manner.

When seeing the so-called disclaimers on TV programs, remember that most TV programs, are not even written for schoolyard aged children, anymore.

Can't answer your question directly, but changes were made when the format flipped to One-on-One Sports, now Sporting News Radio. It was reported at the time that the new owners obtained permission to direct the signal to the east, i.e. more coverage of New York City, and less in New Jersey. The old WVNJ was once the strongest Jersey-based signal in much of Essex and Morris Counties. Now it is virtually unlistenable, at least in the day time.

A college cable station I used to volunteer at run their show, way back in 93 or 94. I think they ended up dropping it because of the expense.

The show...well, it wasn;t all that memorable. But what really burns my cheese is seeing this here in Airwaves/r.r.b...many years of polite requests to stop spamming alt.society.generation-x have so far gone unheeded.

So we just make fun of the playlist.

> Anybody else have an opinion?

He was a passing topic on the local D/FW newsgroup since he's now carried locally on KLIF/570. Prior to that, I listened to him on WOAI from San Antonio, ``the proud flagship of Clear Channel...''. :-)

Anyway, I first caught him back in 1994 when he was doing PM drive at WIOD in Miami, while there on a 4-day wait for a visa to clear to Brazil... But that's another story in itself. So, having some time on my hands, and being a radio junkie, my plan was to listen to as much different Miami radio as I could.

- Then I hit upon Hendrie. Even though I wanted to hear what else may have been on, I stayed locked on WIOD every afternoon. He really is that good. Not only are his bits funny, but his ``meta monologues'' when he talks about the show itself is interesting.

This may be close to sacrilege, and YMMV, but Hendrie today is about as close as I've heard to Jean Shepard. And it was listening to Shep every night as a kid in the 60's that got me interested in radio.

> WEVD, WCFL, and their heirs the Pacifica stations are broadcast
> legacy. They are people seeing a new medium and using it to promulgate
> a radical new concept, and by and large they were chased off the air.

...actually, I'd suspect WLWL New York to be closer to the original WEVD and the current-day Pacifica than WCFL. True, WCFL was a union-based outfit, and Ed Nockels was as radical a station chief as anyone ever involved in commercial broadcasting. But remember, Nockels climbed aboard the Father Coughlin bandwagon for a while circa '35 (purely to irk Colonel McCormick at WGN and the Trib, IIRC); neither EVD or Pacifica ever would do something like that. And the corporatist leanings of the William Lee-era CFL saw the first major political blacklisting of Chicago post-war radio in WCFL's booting Rod Holmgren off its air in September '47; Pacifica has been known to do the same in recent times (witness the KPFA mess) but I doubt EVD would have...

...still, it is interesting to consider that the Blue Network of NBC had two Chicago affiliates operated by a couple of men (Burridge Butler at WLS and Nockels at WCFL) who were very different in social outlook -- but both still drove NBC's New York brass nuts :-) ...

hi:

I have a problem with FM reception which appears, from the entries in more directly related newsgroups (alt.autos.volvo and alt.audio.car) to be bothering a lot of other people too. Those groups do not, however, show any useful solutions and it occured to me that the broadcast group would probably have the expertise missing from the rec groups: hence this post.

Here's the problem. Volvo V70 wagons have poor FM reception. On some models the amtenna consisted of three wires embedded in the driver's side window at the back; on newer models it's on both sides of the car. The result, however, is that a weak signal becomes a highly directional signal with great reception changing to static with as little as a 30 degree turn in the direction of travel.

I don't want to rewire or do anything dramatic - what I'd like is something that works the way my car phone does. Its antenna is glued to the outside of the same window the FM antenna is in (but offset, of course); sticks out about a foot above the car and flexes -- unlike the FM antennas on the 745 wagons which work great but get torn off when you forget to lower them before driving into the garage); and "connects" to the transmitter via a gizmo glued opposite it on the inside of the glass. Presumably that's some form of transducer and I wonder if something similar couldn't be done to the FM antennas on one or both sides?

If so, can you tell what and how? If not, Can you suggest something that will work?

The san diego area sucks for talk radio too. Glad I moved to northern
california.

Sort of wondered about ny talkradio, now I know...

my 2 cents

I think even the FCC can't screw up IBOC Digital Radio.

For one thing, even if we wind up with multiple standards, we'll still have the analog signals that most people will listen to while the IBOC receivers are popularized.
Plus, I think AM broadcasters will be able to create demand for the service by demonstrating the difference to their listeners. AM stations could not do this with stereo. It still wasn't as good as FM. This should be - and the difference between FM and IBOC Digital on FM shouldn't be as great.

In my experience, Delco. I've driven a number of GM vehicles over
the years and the Delco AM radios were always good performers. Even
the ones with extremely narrow audio bandwidth are good DX'ers.

> Is there a superior after-market car radio
>for AM reception?

Again speaking only from my own experience, aftermarket AM tuners are
crap, regardless of brand. The AM sections in these radios are cheap
afterthoughts.

>Are any of the various automakers' "factory-installed"
>radios better than the others?

See above. YMMV.

>Are there ways to improve AM reception on car radios: Increase sensitivity?
>Decrease electric noise? C Crane sells a car antenna this is supposed to
>improve sensitivity: Does it?

I have no knowledge of that product.

>Is the culprit poorer AM radios, or electric wires and various electric
>devices (or both)?

It's both. The amount of man-made interference on the AM band has
increased enormously. One response by manufacturers has been to
narrow the audio bandwidth on the radios, which means the fidelity is
poorer.

I think it is the radios themselves. I have a 1968 Mercury Cougar and the
AM reception is great, far better than any of the modern radios.

The factory radio in my 2001 Chevy Suburban is very sensitive on the AM Band. The FM isn't much to write home about, although it is "adequate."

The AM section is pretty decent by todays standards. I can pick up a local 5000 watt station for about 75 miles during daylight hours. The radio in my previous car was lucky to receive the same station for 25 miles.

The best car radio I have owned in the past 20 years was the factory AM stereo/FM stereo (yes! AM stereo) in my 86 Jeep Cherokee. It had great sensitivity and great selectivity and just simply sounded good. I may be wrong but I believe it was made by /\/\otorola.

I have been considering replacing the POS factory radio in my 96 Bronco with a European AM/FM/SW such as the Sony XR-4950X. It is available from Jacky's on-line (www.jackys.com) and with the currency conversion it is only $110.70 in US dollars. I keep hearing that the Euro versions have far better sensitivity. And the SW band would be an interesting added feature. BTW a lot of Euro car radios also have LW capability since that is a common broadcast band over there.

I had a good friend working for them (a VP if I remember correctly) when I lived in Florida... I
did some of his computer work for him, and eventually got a tour of their facilities in Dunedin. I
asked a few questions during that tour. They have their hands in a bunch of seemingly unrelated
areas, including coupon redemption and ratings.

Nielsen had done some markets for several years, but had stopped long before my tour in the 80's.
(Perhaps in the 60's?) The Arbitron folk had the radio stations fairly well locked up, as well as
advertising agencies. Radio stations tended to stick with the devil that they knew, which presented
a problem. They were the source of the "big bucks." I was amazed that the cost for advertising
agencies was orders of magnitude less than what the stations had to pay, and that was the primary
reason Nielsen got out of that market. They couldn't make a buck in a very labor intensive (at the
time) business if they couldn't get the really heavy bucks out of the radio stations.

We also discussed several of the others like Birch and a few others. I think even Hopper came up.
The big comparisons there were the technologies used.

When I was in radio in Florida, Arbitron was the only game in town. John said that if they could
get a significant chunk of the business, they would get back into it. He retired several years
later about the same time that the Nielsen's sold the business. It had been a family owned shop
until then, and he was not happy with suddenly working for a large conglomerate.

Seeing their facilities was eye opening. They had the first laser printer I'd ever seen.. it
shoveled out huge quantities of 15" wide green bar with statistics..

When the Arbitrons say that a lite format station is number one in that market, is it a sincere number one? Take away the ratings from public places that play music like New York's WLTW's lite format and I'm sure another station will emerge. Public places that air BG radio don't air Howard Stern or Phil Hendrie.

2884. Re: Meyer Gottesman - Does not like Eugene V. Debs (RIP)

Mr. Gottesman, with all due respect, you are mistaken. Eugene V. Debs was not a Communist but a Socialist, which was quite different. He was, like you, "a loyal American who supported Democracy", and a candidate for President several times. Debs was jailed for protesting the draft, and released on the instructions of President Harding, who was certainly not a Communist sympathizer.

Neither Debs nor WEVD were "in the same boat as the traitors...". Contrariwise, they were both products and supporters of the American political system. Debs may have been a socialist, but that did not make him disloyal.

WEVD was named for Debs by his admirers. When the Federal Radio Commission tried to shut WEVD in 1928 (along with many other stations), the station entered this statement into the record:

This station exists for the purpose of maintaining at least one channel of the air
free and open to the uses of the workers. We admit without apology that this
station has no deep concern with reporting polo matches...We are not convinced
that the public necessity dictates the broadcasting of ladies fancy dresses at
receptions in Fifth Avenue ballrooms...If WEVD is taken off the air and in fact
if it is not treated on a parity with others who are richer and more influential
with the government, the people of the nation can truly recognize that radio which
might be such a splendid force for the honest clash of ideas--creating a free market
for thought--is nothing but a tool to be used by the powerful against any form of
disagreement, or any species of protest.

(source: Barnouw, A Tower in Babel, page 216)

Mr. Gottesman, as the man who once started something called "Poor People's Radio", I have to believe that you could have made a similar statement about your own philosophy.

Seems here in the Tampa area that WXTB/98 Rock is sponsoring a show called "Free For All." Of course, you can attend this show ONLY if you get your tickets either by winning them from 98 Rock over the phone...or they will give them away at "ticket raids." However, the "ticket raids" are a sham and people who are trying to get tickets are pissed. In the past few days alone the station has not shown up at the announced locations, gotten to the locations early and given out all the tickets BEFORE the announced appearance time and has even appeared at a titty bar where in order to have a CHANCE to win tickets, you must pay a cover charge AND buy a minimum of two drinks. And then you have to enter a raffle and HOPE to win (you have to wait two hours for the raffle...you have to be present to win).

Seems to me that 98 Rock is stringing their listeners along...but then again, what do you expect from anything Randy Michaels has his finger in?

WCBN WILL DESTROY YOUR FEEBLE FORMATS
WCBN - Over 25 Years of Freeing Your Mind - Listen to us online!

WCBN is the University of Michigan student-run community freeform radio station in Ann Arbor, Michigan. We broadcast at 200 watts to the University and its surrounding communities from the basement of the Student Activities Building in downtown treetown. We have been broadcasting a genre-less overview of music, news, and public affairs for over 25 years.

WCBN's musical format is freeform, with some specialty shows. Freeform involves all different kinds of music, including jazz, reggae, blues, hip-hop, country, rock, and just about everything else under the sun. Instead of telling our DJs what to play, we allow them to select their own recordings from our vast and unique library. It is their responsibility to mix together many different kinds of music in an intelligent fashion, and show links between musical genres.

Click here to listen to our live WCBN-FM Ann Arbor broadcast!

If you can find one.. Mid 1980s Spark-O-Matic (now Altec-Lansing).. 40 watts audio output, 5 band equalizer, AM stereo, Wide Narrow bandwidth filter..

Portables..

Cheap - GE SuperRadio III

Not so cheap.. anything with synchronous detection like the Sony 2010 or some ICOM units

2890. 50s Rock programs all the time online via Rock-it Radio

primero 50's Rock & Roll via la Computadora y Real Player.

Hello Everyone,

We have 2 new shows on Doo Wop on Rock-it Radio this evening. It is in
our archives under shows #326 and #327. Our archives page is at
http://www.palmsradio.com/rockittext.htm
so it's more group harmony on a Sunday night here on Rock-it Radio. Here are
the playlists of each show.

Rock-it Radio show #326
features Cool Bobby B
And the latest Doo Wop Stop

The latest from the Doo Wop stop is on Rock-it Radio in our archives at show
#326. Here is the playlist.

1. Rockin' with the Clock (Cool Bobby B Intro) - Shirley and Lee
2. Please we don't tease - The Spaniels
3. Honey Honey - Lewis Lymon
4. Wait a minute - Tim Tam & the Turnons
5. Follow the Rock - The Bay Bops
6. On the way to Cape May - Philly Cuzz
7. Forever Loving You - The El Dorados
8. Eyes - The Earls
9. Knee Socks - The Ideals
10. Feeling No Pain - The Del Satins
11. Mambo Boogie - The Harptones
12. Rendezvous with you - Streetcorner Symphony
13. Groovy Baby - Billy Abbott and the Jewels
14. At my Front Door - The El Dorados
15. Book of Love - The Monotones
16. There Goes my Girl - The Chancellors
17. Down by the Ocean - Philly Cuzz
18. Gee What a boy - The Joytones

For more of your Doo Wop pleasures make sure and check out our Doo Wop Links
page at: http://www.palmsradio.com/doowop.html

And you can check out the Doo Wop Stop at there own website at:
http://www.doowopstop.com
And make sure you e mail Cool Bobby B at coolbobbyb@doowopstop.com
And tell him you heard him on Rock-it Radio.

Al Cool Daddy Smith presents
the Hall of Famers Of Doo Wop

In Rock-it Show #327 Al "cool daddy" Smith has a tribute to some of the doo wop groups in the Rock and Roll Hall of Fame. Plus a mix of great stuff we all love to hear. We also had a dedication
From Rock-it Radio listener Roderick Robinson (who will be a guest DJ by the way soon here on the Rock-it) and he wanted to hear some Little Willie Littlefield. Here is the playlist of show #327.

1. Jump Children -- The Flamingos 1954
2. I'll be home - The Flamingos 1956
3. Java Jive - The Ink Spots 1940
4. Street of Dreams - The Ink Spots 1943
5. Ain't a better story Told - Little Willie Littlefield 1950
6. Baby Sittin' all the time - Bob Hicks and the Fenders 1957
7. We go Together - The Moonglows 1964
8. Sincerely -- The Moonglows 1954
9. See Saw - The Moonglows 1956
10. Ten Commandments of Love 1958
11. The Lonely Dragster - Bobby Fuller Four 1963
12. Intoxica - The Centurians 1962
13. The Shadow knows - The Coasters 1958
14. Shoppin' for clothes - The Coasters 1960
15. That is Rock and Roll - The Coasters 1959
16. I must be dreamin' - The Coasters 1955
17. Way down under blues - Bee Arnold and the Tune Toppers 1954
18. My baby's done gone away - Al Ferrier and the Boppin' Billies 1956
19. Glory Train - Ricky Nelson 1960
20. True Love Ways - Ricky Nelson 1978/9
21. A kiss from your lips - The Flamingos 1956
22. True Blues - Roy Milton & his Solid Senders 1947
23. I promise to Remember - Frankie Lymon & The Teenagers 1956
24. Why do fools fall in Love - Frankie Lymon & The Teenagers 1956
25. Interview with Frankie Lymon
26. Please be mine - Frankie Lymon & The Teenagers 1956
27. If I had a choice - The Pearls 1962

Some truly great picks by Al! You can catch it at our archives page at:
http://www.palmsradio.com/rockittext.htm
and clicking to show #327. You can also E mail Al with your comments on the show at: aandb.smith@sympatico.ca

---
You know if you are reading this message in a newsgroup or club you are getting about 1/4 of the Rock-it
News and playlists.... Come join our listeners club !! It's free and the notices arrive in your E mail box.
Just go to our main website at: http://www.rockitradio.net and at the top of the page click on the icon that puts you on our mailing list.

I just recently received a very cool letter from M.O.M. - That stands for Mean Old Mike by the way! He made mention that he enjoys the Rock-it Radio programming - but we are falling short in a certain category. All the DJ's are a bunch of just hairy legged men!! And thought it would be a great idea to have a nice soft sounding Female DJ on the Rock-it..... So... we are throwing this out there!

Invitation to the Ladies - Come be a guest DJ on the Rock-it

Ladies do you like oldies? Umm songs that is! Well drop us a e mail saying that you would be interested
In sending us a tape of some of your recorded oldies and your voice for song intros. The rest of the details are surprisingly simple to follow --- E mail ole Bennie here and tell him you are interested in doing a show and how to go about it. Our E mail address is: Rockitradio@aol.com

---
Rock-it Chat Room Tuesday Night - All invited!!!

This coming Tuesday 14 August at 6:30 p.m. to 8:00 p.m. (U.S. Pacific Time) we will be in the Rock-it Chat room to chat to your listeners and talk about 50's Music or whatever else comes up. All our listeners are invited to come on in the Rock-it Chat room. To come in just go to our main website at:

http://www.rockitradio.net and scroll down until you get our chat room link - click the link and give yourself an online name and come on in!

Well that's about it for now - We hope that you enjoy these programs and remember you can always e mail us at the above address with your requests and dedications here on the Rock-it.

Until Next Time,

Bennie Dingo
Rock-it Radio

E Mail: Rockitradio@aol.com

"Brenda Ann" brandad@kornet.net wrote:

>>I don't know about any current plans for a digital version of the GE Superadio... but in 1983 they actually had a digital version on the market, called the Superadio Plus.<<

I don't ever recall hearing of a digital unit, but I did see a mention in '82 in R&R or maybe Radio World of a Superadio with a built in cassette recorder, so I bought one.

I still have the box for it *somewhere* in the dungeon :-) It was not referred to anywhere on the packaging as a Superadio. I believe it was a "Silver Signature" or something like that. The model # was 3-5280B, and it was a silver/gray color.
Like the Superadio, on the left end of the band, it said "long range," and "high selectivity" on the right. There was a selectable five-segment LED tuning/battery strength/recording level meter. Switches were provided for AFC, tape selection (CrO2 or std.), band and loudness. The loudness switch was really nice, in that it boosted both the low *and* high end at low volume. There was also a built-in mic for the recorder.

The unit incorporated a somewhat primitive sleep feature. By running a cassette with the "play" button engaged on the cassette unit, you could drift off while listening to the radio in the "sleep" mode... until the tape stopped, that is. The noise from the button was loud enough to roust all but the deepest snoozer.

On the back of the unit, GE included an "AM beat" switch; an A-B positioner to shift the oscillating tone that resulted from using the recorder while listening to the AM band.

While this unit should have been a DXer's dream, the cassette recorder was a relatively poor performer. The automatic recording level compressed the audio to the point where the playback quality was no match for straight off-the-air listening, even on AM.

The radio itself had great sound. Unlike the Superadio I, there was a tweeter added that was later included in future SR generations. If the LEDs were left in the "off" position, battery life for the radio itself were just as L-O-N-G as for the other SRs. Compared to my SR I, the 3-5280B was just a bit less sensitive and definitely less selective on the AM band, but the sound quality was so impressive that it more than made up for it.
It still sounds great nearly 20 years later.

The quality control issues have dogged SRs since the first model. In 1980, I went on a DXpedition with a friend, our two new SR Is in hand. Mine had a defective volume switch; there was not much of a low volume range to it. It

went straight to LOUD!. But in a side-by-side comparison, mine pulled in daytime signals that his unit couldn't. He exchanged his for a new one... same results. We came to the conclusion that mine was a freak. Needless to say, I kept my "lemon." :-)

2892. Re: Phil Hendrie Show

>The first time I heard Phil Hendrie, I thought he was funny. Now that I
>hear the same shtick every day, I find him tedious.
>
I live in LA and have been listening to Phil for several years. There
are listeners and there are callers. Phil and his "guests" may follow
a familiar pattern but the callers are not to be believed!

Remember, callers are not "in" on what is going on. I heard Phil on
one segment about a week ago call the wholoe thing off at about 10
minutes to the hour and explain that it was all just "show biz" .
Callers were so mad and upset with the subject matter they were
shouting, threatening all sorts of stuff and calling Phi's "guest" all
sorts of names.

Compared to everything else, there is nothing quite like Phil's show.
He was on KFI, until about a year ago when the syndication started,
from 4PM to 7PM. Unfortunately the Clear Channel division of
programing slipped him into the evenings on the refeed to keep
local/live on the air during drive time.

By the way, VP of Syndication Dave Hall exists. But he is the Program
Director at KFI and he has gotten some very weird calls from
"listeners" following some of radio bits where the Phil version of
"Dave Hall" was preaching some outlandish programming concepts.
Phil also has used other KFI on air talent names in some of bits.

Hey hil, lets have more of Dave Hall.

KEYI Austin TX just played "White Christmas" by the Drifters
Aug 15th 730pm. Guess it's now open season for Christmas
music! :-)
Or maybe it's a signal to evacuate the state. :-) According to the
book "Idiot's guide to the Vietnam War" the armed forces radio
station in Siagon played "White Christmas" in April '75
just before Siagon fell. It was a signal to American officials to
pack up and get out. To be evacuated out of country.

> analog radio.

No they WILL NOT (use it the same as they use analog radio).

And this is THE critical message we get from Europe.

They will not use it the same as they use analog radio because
some of it (i.e. Sirius and XM) will be a costly subscription service,
and, more important, the receivers will be EXTREMELY costly
(compared to the typical $20 radio) and will not even be offered
in the usual "walkman" and "boombox" types. The receivers will
only be aimed at special, well-heeled buyers looking for (fraudlently
touted) high quality for home and car use.

OF course, it it actually works perfectly, perhaps some day the price
will come down and it may actually succeed. But it seems that currently
it is specifically designed for failure.

> If you can find one.. Mid 1980s Spark-O-Matic (now Altec-Lansing)..
> 40 watts audio output, 5 band equalizer, AM stereo, Wide Narrow
> bandwidth filter..

I have one of those... it's an AWESOME radio... FM is nothing special, but the AM band really rocks! In "Wide" mode the bandwidth is crisp and clear enough to sound as good as FM, and in "narrow" mode it is really good at "DXing" distant stations. Here in New Jersey, using my Sparkomatic I can pick up 1030 WBZ from BOSTON in *broad daylight* at 2 PM, clearly and in AM STEREO! And all the way in central Pennsylvania, near Harrisburg, it can still pick up many of the New York City stations clearly in Stereo, at least 150 miles away!

Sparkomatic made several car radios with wide/narrow AM Stereo, including the SR-420, SR-425, and SR-430. These all date from the late 1980s. In the early 1990s, the company was re-established as Altec Lansing, now a well-known manufacturer of computer speaker systems.

Also... with the 5-band graphic equalizer, these Sparkomatics can really pump the bass! Any other "bass boost" system, even Sony's X-Bass, pales in comparison. And the Sparko's have a very cool "retro '80s" look, with NEON ORANGE lighting and an orange LED display (not LCD -- it glows, like a clock radio!).

For more info (with pictures) on these radios and other radios that support AM STEREO, go to the AM Stereo web site at:

http://www.AMStereoRadio.com/

and click on "AM STEREO Capable Radios".

2902. FM DX in Northeast USA

Newsgroup: rec.radio.broadcasting
Date: 2001-08-18 02:41:49 UTC
From: Kevin Tekel <kevtronics@compuserve.com>
Message-ID: <tnrlfdlpmab644@corp.supernews.com>
Source record: 13563
Cross-posted to: alt.radio.broadcasting,rec.radio.broadcasting

Did anybody else get some very good FM DX last night in the Northeast? Here in New Jersey I was picking up stations from all over the place, like Delaware, Maryland, Virginia, Connecticut, Long Island NY, and even North Carolina and the Cape Cod, Massachusetts area!

All this on a Panasonic walkman using only the headphone cord as the antenna! Quite a few stations were even "overpowering" local stations on the same channel.

Also... what kind of propagation is responsible for this 100- to 250-mile FM DX? E-skip? It seems too short for Tropospheric Ducting, which usually brings longer distances, like the one time I heard a station from Fort Smith, ARKANSAS here in NJ on my car radio while driving!

I suppose there would have been some good DX on the TV channels or the VHF communications and ham radio bands last night, but I didn't check -- I was having too much fun on FM. I know I would have gotten even more stations, especially with a better radio and antenna, but at 3:30 a.m. it was time to get some sleep!

Don,

Do you have a source for getting them (Superadio III's) wholesale?
Might be interested in selling them on a website. Mine is great, but
it does drift a bit especially on the upper frequencies (our locals on
1290 and 1410). Still have to give the edge to my old Sony ICF5900W
for AM DX (at least selectivity-wise.) But it finally gave up the
ghost.

Body handling: HTML body converted to readable text

The two antennas are causing the directivity. One antenna
adds or subtracts signal from the other. It happens on
strong stations too, but the nulls still have enough signal energy
that you don't hear it. Can you connect the radio to just one
of the antennas? That should do it.

Also try asking in the newsgroup rec.radio.amateur.antenna
Ham antennas are similar to receiving antennas, just differing
scale of size. Otherwise, a 2 way radio antenna is identical
to a receiving antenna.

The Greaseman is back on the air in Washington DC, via WZHF-AM, Arlington.
He streams the show live each morning via www.live365.com while
simultaneously burning the show to CDs. The CDs are then replayed all day
and evening over the web until the next day's broadcast.
According to numbers posted on Live365, Grease is on top in the Talk and
Comedy categories.
If you've only heard tapes of the guy, you have to hear his live show.
Killer! Plus, I believe he's looking to add satellite affiliates. Write him
at greaseshow@aol.com

Like it or not, auto radios work well only with a car antenna mounted on the fender on the passenger side away from those oscillating car computers. Window wire antennas are crap. In a month you can mount a small antenna on the roof of your car and start listening to XM satellite radio. Check out xmradio.com.

You would do pretty well with one of the antennas designed for 2 meter ham use. There are antennas like that available, and they will work quite satisfactorily for FM, much less so for AM, because of the high pass characteristics of the coupling.

Wish I could say the same thing. I live in tower heaven and get lots
of overload, but its probably unavoidable. I still can get a few FMs
50 miles away.

WCBN WILL DESTROY YOUR FEEBLE FORMATS

WCBN - Over 25 Years of Freeing Your Mind - Listen to us online!

WCBN is the University of Michigan student-run community freeform radio station in Ann Arbor, Michigan. We broadcast at 200 watts to the University and its surrounding communities from the basement of the Student Activities Building in downtown treetown. We have been broadcasting a genre-less overview of music, news, and public affairs for over 25 years.

WCBN's musical format is freeform, with some specialty shows. Freeform involves all different kinds of music, including jazz, reggae, blues, hip-hop, country, rock, and just about everything else under the sun. Instead of telling our DJs what to play, we allow them to select their own recordings from our vast and unique library. It is their responsibility to mix together many different kinds of music in an intelligent fashion, and show links between musical genres.

Click here to listen to our live WCBN-FM Ann Arbor broadcast!

2916. Re: Best AM Car Radio

Newsgroup: rec.radio.broadcasting
Date: 2001-08-18 02:42:38 UTC
From: Milton Finks <fmbenton@earthlink.net>
Message-ID: <tnrlgui3e6ar6c@corp.supernews.com>
Source record: 13577

One thing has changed over the years. Makers now include a circuit to DECREASE sensitivity over the whole AM band as you get near an AM Transmitter. To decrease sensitivity over JUST the frequency of the nearby xmitter would be too expensive so the entire band suffers.

Milton Finks

What do you mean "not at all"? Most CBS stations aren't *owned* by CBS.

In the Clear Channel situation, all of the entities being advertised (as
well as the radio stations used to do the advertising) are O&O's.

It's not really the best analogy.

The Pioneer SuperTuner series has very good AM and superior FM reception.
But, the best radios for AM reception are still the old tube type ones from
the 50's.. esp. the Buick Sonomatic... of course, you would never fit one in
a late model car....

Not the FM section .... I live 1/4 mile from a 50kW AM station
on 97.5 and the Superradio overloads seriously on both 90.9 (100 kW
20 miles away) and 101.1 (300 watts 1.7 miles away).

The best radio I have found for overload ... and that can receiver those
modest signal stations mentioned above ... is a Radio Snack
$14.95 bright yellow "joggers walkman".

Here in Metro Detroit, we have EXACTLY that situation. The UPN station
(50) and the CBS station do a lot of cross-promotion, and they even
have the same news team.

[Moderator's note: Here too, but the UPN and CBS stations here have a
common owner.]

So, when does everybody think that radio's 'Mafia', Clear Channel,
will buy both News Corp. AND Viacom?

Since r.r.b and s.e.t.b are staffed by the pros from both fields, I'm hoping that a dummy like me can get a question answered that's been on my mind for quite some time. <g>

Ever since the digital lossy-compression revolution in audio and video production and distribution, I have been agitated by some form of lossy compression artifacting which leaves a "slithery, ringy, watery" texture in (or in place of) the highest-sampled frequencies of various audio recordings and feeds.

To demonstrate, a truncated MP3 file which suffers severely from the problem in question may be found here:
<http://www.angelfire.com/music4/sonicnoise/>

I hear this ugly stuff in everything from radio spots to the audio from certain cable networks' MPEG satellite feeds. It's also present in all digital cellular telephone calls, in 40-50% of MP3 files (or so), etc.

Aside of "a plague," what does one call this particular type of noise? The closest I've come to finding a name for it is that it may be known as 'shaping noise.' But I'm unsure. Help? So long as I'll apparently spend the rest of my life subject to this callous sound, I figure that I may as well know what to call it ... officially. :^)

In the car I picked up WHFS on 99.1 (Annapolis, MD) at roughly noon CDT on the 17th, in the Kankakee, IL area. The signal was so strong that I picked up the RDS moniker "99.1 HFS" as well. What was odd is that not a single other station around the dial (DC, Philly, etc.) was E-Skipping at that time, except for some heavy interference on 93.1 which is occupied by WXRT Chicago.

On my way to West Africa once again from the U.S.
I am looking to purchase one of the new WORLDSPACE Digital Satellite Receivers. I am particularly interested in the JVC FRDS100 Model. It is currently out of stock on the Worldspace.com web site. I prefer to purchase this model in the U.S. prior to leaving for Africa. Can anyone point me to a business in the U.S. that is selling Worldspace Receivers and in particular the JVC FRDS100. (BTW, I already own 3 shortwave receivers, ICOM R71a, Sangean Portable with Cassette and a YACHTBOY 400).

I'm sorry for cross posting this in multiple rec.radio groups but some of them do not have much activity and I thought the Shortwave and Broadcast people would be of significant help. TIA.

Welcome to the club, Brian. You have a sensitivity to compression (something I also have). I would imagine if tested you could tell ANY compressed signal against any NON compressed signal.

I grew up on analog sound, and ALWAYS know when I hear digital. But additionally can tell compressed audio in radio, everytime.

It is possible that tropo ducting could have been responsible, especially if the air temperature is rather high. Also, if there are thunderstorms in the area of the transmitter, this can also have an effect on signals travelling long distances. E-layer skip is a possibility, but is usually rare on high frequencies above 6 meters.

I just got one of Sony's MP3 on CDR disk playing boom boxes, and I hear
a lot of this watery wavery sound in a good half of the MP3s I
downloaded before Naptster died. I then tried the same CDR
in my computer and though the computer speakers aren't as good,
I can still hear it. Must be related to the amount of compression
applied when making the mp3 file.

On my way to West Africa once again from the U.S.
I am looking to purchase one of the new WORLDSPACE Digital Satellite Receivers. I am particularly interested in the JVC FRDS100 Model. It is currently out of stock on the Worldspace.com web site. I prefer to purchase this model in the U.S. prior to leaving for Africa. Can anyone point me to a business in the U.S. that is selling Worldspace Receivers and in particular the JVC FRDS100. (BTW, I already own 3 shortwave receivers, ICOM R71a, Sangean Portable with Cassette and a YACHTBOY 400).

I'm sorry for cross posting this in multiple rec.radio groups but some of them do not have much activity and I thought the Shortwave and Broadcast people would be of significant help. TIA.

A few of us just call it "artifacts" or "aliasing". Whether or not it is technically correct, the meaning is implied and is understood in context. There probably is an actual name for the damn thing, but me and my buds get by fine with these two references. I'll be watching to see who else posts...

Hi
We got this email at our Hollywood Voices email
and I thought I would pass it on because it's a little more
radio oriented than we are .
http://members.tripod.com/hollywoodvoices/

We mostly have been supplieng tv news opens and commercial tracks . I
looked at the website it needs a little more traffic Les

For Immediate Release Montreal, Canada
August 19th, 2001

TheVoiceDepot.com Announces Exclusive Promotion

Montreal, Canada; August, 19th, 2001: Aflalo Communications Inc. in
collaboration with TheVoiceDepot.com, The Leader in Interactive Voice
Services, announces an exclusive online promotion for a free interactive
web-site.

Aflalo Communications Inc. will design an interactive web-site, complete
with Flash integration, to the person (or station) who submits the most
creative and original radio liner.

"We've put together a panel of judges from around the world, literally. Top
radio pros and creative talent will be screening entries for the most
creative and original liner." said Marc Aflalo, President and CEO of Aflalo
Communications Inc.

Liners can be submitted via the online form at TheVoiceDepot.com
(www.thevoicedepot.com/promo) or by email to liners@thevoicedepot.com.
Entries should be submitted no later than September 10th, 2001. The grand
prize draw will take place on September 15th, 2001.

Contest progress can be followed online in TheVoiceDepot.com Forums
(www.thevoicedepot.com/forum) where information and samples will be posted
frequently.

For more information contact:

No, you CAN blame it on ducting; A phenomenon that allows a handful of
signals to be "ducted" in to your locale as if traveling thru a long tube,
essentially shutting out ancillary stations.
Do a Google search for "ducting FM" and see what happens.
AP

> Also... what kind of propagation is responsible for this 100- to

it's about time someone besides me realized this!!! this is a problem too when FM stations don't align their STL's right.. a lot of the stations around here have that problem...do they just not care about it?! it's obvious to everyone that it sounds like crap...it's also a problem in AudioVault files..when we dub music/spots into our Vault, it's formatted as a MP2 and it too has the digital distortion.. I've mentioned it to a couple of people at the station, but they seem clueless as to what I'm talking about..

In the car I picked up WHFS on 99.1 (Annapolis, MD) at roughly noon CDT on the 17th, in the Kankakee, IL area. The signal was so strong that I picked up the RDS moniker "99.1 HFS" as well. What was odd is that not a single other station around the dial (DC, Philly, etc.) was E-Skipping at that time, except for some heavy interference on 93.1 which is occupied by WXRT Chicago.

I see that ABC News touted the long-awaited return of commentator Paul Harvey today.

Mr. Harvey managed to announce the "morning" report but another substitute did the twelve-noon broadcast. During the morning report poor Paul sounded like death warmed-over.

Mr. Harvey: Please get well, we miss you.

Pat
Green Bay, WI

BTW: Our local affiliate dumped Paul off the air about a year ago, I now have to listen to a station 60-miles out to listen to him. Is Paul on his way out? Will he fulfill his new 10-year contract with substitute voices like Sam Donaldson? Heaven Forbid!!!

Here in New Jersey I was picking up stations from all over the place,
like Delaware, Maryland, Virginia, Connecticut, Long Island NY, and even
North Carolina and the Cape Cod, Massachusetts area!

All this on a Panasonic walkman using only the headphone cord as the
antenna! Quite a few stations were even "overpowering" local stations
on the same channel.

I was driving home from some errand or another and couldn't get the local
station at 96.1 because some oldies station at the same frequency was stomping
all over it.

An FM opening noted here in Fairfield County CT too.

2951. Review of the Superadio III (was Re: Best portable AM radio?)

Newsgroup: rec.radio.broadcasting
Date: 2001-08-21 21:08:59 UTC
From: ben hogland <benhogland@hotmail.com>
Message-ID: <to5jfb5f002gb6@corp.supernews.com>
Source record: 13535

I thought some of you might be interested. Thanks to the comments here and after reading about it online, I bought and received my Superadio III last week (mail-order) and tried it on my camping trip this weekend.

I went to Mt. Rainier, Cougar Rock campground for a long weekend.. Radio reception on the AM dial would be considered by anyone to be weak at best there. Using the Superadio III it pulled in the stations quite well. I was able to pick up AM stations from Spokane and Seattle fairly easily. I picked up a Portland AM radio station but it was not the greatest.. After Dark I was able to pick up a California AM station (Disney Radio).

Comparing the Superadio III side by side with my Sangean ATS-909, the Superadio III was only slightly better (if any) at picking up long distance AM stations. Both radios respond to using select-a-tenna which make radio listening clearer.

Where the Superadio III excels though is it's audio quality. Nice deep and rich sound quality which makes it much easier and more enjoyable to hear/listen to even distant AM stations. And, of course, that is one of the main reasons why I wanted another radio. Overall I am a tiny bit disappointed in the Superadio III as I thought it would be measurably better then my ATS-909 as far as long distance reception. Of course, my ATS-909 is a great radio too but from the reviews I've read here and on the web about the Superadio, I thought it would be more noticeably better on the AM dial.. But the superadio is a great radio and well worth the 40 bucks.

I did see the original Superadio (number 1) on eBay and it sold for 71 bucks. I'd love to try one of them out.

Ben

P.S. I did bring a third radio.. The freeePlay S-360. I also compared it to my other two radios on this trip. It didn't even rate as it couldn't pick up even the easiest of stations on the dial clearly..

Be aware that European radios have synthesizers which step in 9kHz on MW and LW, and not the 10kHz of the USA. Possibly a few can step in 1kHz steps in the manual tuning mode.

Since r.r.b and s.e.t.b are staffed by the pros from both fields, I'm hoping that a dummy like me can get a question answered that's been on my mind for quite some time. <g>

Ever since the digital lossy-compression revolution in audio and video production and distribution, I have been agitated by some form of lossy compression artifacting which leaves a "slithery, ringy, watery" texture in (or in place of) the highest-sampled frequencies of various audio recordings and feeds.

To demonstrate, a truncated MP3 file which suffers severely from the problem in question may be found here:
<http://www.angelfire.com/music4/sonicnoise/>

I hear this ugly stuff in everything from radio spots to the audio from certain cable networks' MPEG satellite feeds. It's also present in all digital cellular telephone calls, in 40-50% of MP3 files (or so), etc.

Aside of "a plague," what does one call this particular type of noise? The closest I've come to finding a name for it is that it may be known as 'shaping noise.' But I'm unsure. Help? So long as I'll apparently spend the rest of my life subject to this callous sound, I figure that I may as well know what to call it ... officially. :^)

Here in central Connecticut, I was hearing WOGL Philadelphia, WDHA Dover, NJ, and pretty much the whole New York City FM dial on my car radio at about 2 a.m. Friday. When I listened again, at 8 a.m., the stations from the south were gone, but WKLB Boston was pounding in on 99.5 and WCTK New Bedford, MA, was like a local on 98.1. All the DX was gone by 10.

I have a Radio Shack DX-392 (their version of Sangean's 818CS) that I purchased for shortwave DX. This radio has excellent performance on standard AM broadcast. Whenever I am going somewhere where I will be staying overnight, I always take this radio with me to DX the AM band. I never need an external antenna; the telescoping antenna and the internal ferrite-core antenna work just fine.

PRESS RELEASE (Free for publication)

EUROPEAN FM HANDBOOK 2001 www.fmdx.com

- The ultimate directory for European FM Radio Broadcasting!

- 12th edition available NOW! 673 pages + full colour covers, B5 size.

- European FM Handbook 2001, the first edition by the new publisher was ready in late June. Next edition will be ready in May 2002.

- Country by country lists of FM Radio Stations in Europe, Russia, Near&Middle East, Central Asia and North Africa. All countries have station lists in frequency order, many countries also with alphabetical station lists.

- Frequencies, transmitter sites, networks, local stations, addresses, telephone and fax numbers, www and E-mail addresses etc. Complete with maps and other information.

- Page examples from the European FM Handbook 2001 can be found as PDF files on FM Media Plaza WEB at www.fmdx.com

- ISBN 951-98733-0-9 ISSN: 1458-0349. Published by Ab FM Media Plaza Ltd, Eskilomv&#65533;gen 294, FIN-07880 Liljendal, FINLAND

- A must for all FM DXers and lots of valuable address information also for all other radio enthusiasts.

- As a FM broadcast equipment manufacture, software and program producer, advertising bureau to name a few, do You really know how many FM Radio stations there are that can buy YOUR products? As a FM radio station, do you know were other stations are broadcasting? We know! And we have put it all in the 12th edition of the European FM Handbook! Order Today!

- Price: 267,00 FIM = 45,00 Euro = 88,00 DM = 42,00 US$ + Postage.
Price for customers outside European Union area = - 8 %
European FM Handbook is sold in the amount of Finnish Mark (FIM) or Euro.

- Postage in Europe: Priority Mail: 120,00 FIM = 20,18 Euro = 39,50 DM = 19,00 US$
Economy Mail: 81,00 FIM = 13,62 Euro = 27,00 DM = 13,00 US$

- The above prices are for 1 book. Please take a look at www.fmdx.com for book prices and postages for larger quantities and for prices outside Europe. We sell and ship worldwide!

- Fastest and easiest way to order is with Credit Card. We accept VISA, MasterCard and Eurocard. Download the order form from www.fmdx.com

- Visit www.fmdx.com for ordering information, previews, downloadable Credit Card order form etc.

Around 91 or 92 I picked up the 96.3 station from Cape Cod (then WNTX I believe) in north-central NJ when NYC's WQXR went off the air early monday morning. Got in a request on the oldies show there too even. Somewhere I've still got the aircheck.

This is where an attenuation switch would be very helpful. A switchable
circuit that, when switched on, would be useful by attenuating all signals by
20 db. This would probably do the trick. I don't know of any manufacturers
that include such a switchable circuit into their radios, however.

It will be the same problem that we had when Motorola was trying to promote AM Stereo. There were two or three different methods of encoding/decoding Am Stereo then, and the stereo radios at that time could only decode one method. If you had a C-QUAM radio, you could not decode signals usign the other two or more methods.

Lack of standardization, as well as the lack of popularity of AM Stereo, caused its demise.

Greetings to all of you in r.r.b.-

I represent the CPC (Courtesy Program Committee) for the International Radio Club of America (IRCA). IRCA is a radio club which specializes in the hobby of hearing distant radio stations (AKA "DXing") on the standard AM broadcast band. I'm writing this because I'd like to hear from any of you interested in doing a DX test this DX season (roughly, this fall, winter, and early next spring).

What IS a DX test? Basically, by FCC regs, it's a broadcast done typically between midnight and 6am where you ID your station often - a special transmission aired by a station for the specific purpose of giving DXers a chance to log your station, which under normal circumstances may be very difficult or impossible to do. Many stations work in a DX test during their normal testing/maintenance, so many tests are done during the traditional Monday morning silent period, though this hasn't been the case in recent years.

What else is broadcast during a DX test? That depends upon the station. Some stations play a half-hour or so of Morse code or test tones, mixed with voice IDs. Morse code cuts through interference from nearby stations especially well, making identification easier. Other stations' DX tests consist of Morse code IDs played on the hour and half hour, mixed in with their regular programming. Others play special music that will "stick out" - like Christmas music in October, march music, or TV & movie themes. The composition is really up to the station. Upon hearing such broadcasts, DXers will send the station they heard a reception report in hopes of getting a QSL (verification of reception) from the station.

All DX tests will receive wide publicity in several publications read by DXers all over the world, such as IRCA's newsletter, the DX Monitor, and the electronic version, the Soft DX Monitor, as well as several radio-related mailing lists and web sites.

Please feel free to check out IRCA's web site at http://www.geocities.com/Heartland/5792 for more information on DX tests, IRCA, or links to other radio clubs - and by all means, if you have any suggestions or comments while you're there, don't hesitate to send some feedback! Also, if you have any questions about DX tests, just let me know and I'll try to answer them!

If you (or someone you know) would like to do a DX test, please contact me at lynnhollerman@netzero.net or ircamember@geocities.com and let me know, so I can get the word out!

On behalf of all DXers, thank you for your time in reading this! I hope to be hearing from you soon!

Lynn Hollerman.
(lynnhollerman@netzero.net or ircamember@geocities.com)

I thought that they were "forbiding" sales of WourdSpace radios in the USA, partly since their satellites are not licensed to cover the USA. Those radios are widely advertised in British journals such as The Short Wave Magazine. (Cost about 100 pounds)

There was some sort of initial connection between WorldSpace and XM Satellite Radio, but I'm not so sure it still exists.

I seem to recall there were a number of little in line amplifiers available from auto parts places, K mart and the like that provided about 15 or so db gain.

I'm wondering if installling one of these in your existing system would solve the problem?

You might try a stereo shop as I also remember they had a fender or roof mountable short rubber ducky antennas mounted on a base containing an amplifier. These worked well. They may also have a thru-glass whip available tuned for the FM band although I doubt these antennas will perform on AM.

If nothing else works out, you can glue a wire to your inside windshield, fed with cheap coax and install a preamp in the line. This will work about as well as most anything else.

>just fine.

I have had a Radio Shack DX 390 (the predecessor to the DX392) for several years and it is by far the best portable radio I have ever owned. I know it cost a lot more than a Superadio II but I believe it out performs it, and it adds SW & LW bands too. When I say it out performs the Superadio, I mean as far as tuning and catching weak stations. The audio quality is not quite as good as the Superadio, but it makes up for that with the digital tuner.
It has an AM wide/narrow band switch that greatly improves he fidelity on stronger AM stations.
It has a signal strength meter on the digital tuner, and it is really neat to scan the AM band.. I can always tell when I hit one of the Class C graveyard channels 'cause the signal strength meter is pegged yet there is almost nothing audible (there are no Class C's near here, so all I hear is the clash of carriers). Like the Superadio, it runs on 4 D's so it lasts forever on a set of batteries.

As for car stereo, I have 3 Delco radios in my garage and one each in my 2 vehicles. I scoured the junkyards to find them to replace the newer stuff, because they have AM stereo and they have incredible sound. I don't remember the model numbers, but they are the radios with the 5 band graphic EQ and the AM Stereo/Mono button that toggles between normal/wide band.
They are, in my humble opinion the best car stereo ever made. There is an AM Stereo station just south of here that still broadcasts music (Soft AC) and they are AMX certified (WZZB Seymour, IN 1390kHz, 1kw D) and they sound almost as good as the FM's around here. I keep the 3 extras on the shelf in case my others die, since Delco doesn't mfg them any more. I actually considered selling one of them on eBay but others don't appreciate the finer things in life like AM Stereo (tongue in cheek).

Another thing I hear in many MP3s is something that sounds
like plain old fashioned analog reel to reel tape dropouts.
Like when you used poor quality tape that doesn't hold all of
the magnetic signal from the record head, due to
uneven iron oxide coating on tape.

KILT am (infinity) in Houston has an interesting ID liner. In a
very low voice, the announcer says "C-I-L-T Houston". Why in the world
is there a "C" in there? Did KILT move to Canada?
It plays several times an hour but I'm not sure if I've heard it at
the top where the "legal" ID should go.
The first few times I heard it, I swore it spelled out (pardon this)
C-L-I-T. But I suppose that's just my dirty mind playing tricks on me.
Made sense, though, with their recent emphasis on "guy talk."

Clear Channel Communications Inc. in Denver installed EAScriber Pro this month!

All EAS (Emergency Alert Signal) activity for eight radio stations is monitored in real time and logged into a database

Denver's engineers are already using EAScriber for their monthly EAS reporting to the FCC

The EAS logs are being integrated into the Denver web site

visit "http://users.aol.com/tdmsoftware/home.htm" for more information on EAScriber Pro or email tdmsoftware@aol.com

I have this weird thing going on here..a lot of you know me from the alt.radio.broadcasting group. I belong to this one too, and sometimes it's jammed full of comments just like the other group, but many times lately, I'm getting nothing! I have done all the standard checks, checked my applied view, etc., but most of the time I'm getting nothing here on rec.radio.broadcasting. I know it's not because nobody's posting, because a lot of you belong to the other NG as well and post to both, like I do. Anybody else having this kind of trouble? I'll be very interested to see if this message posts to the group..

I really thought I was going crazy.... It was a bright sunny day sometime in July, 1987. I had a portable JVC boom box bought only a few months before - it was the pc-150, one of the better units at the time. While the antannea was fully extended I began to spin the flywheel to bring in the next FM station, and was on my way between 94.7 and 97.5 when I picked up a station from somewhere in the midwestern US. CD players were new to this station as they constanty referred to the 'disc drive' or 'laser music'. The clincher is, I am in a small town in Newfoundland, Canada. This would be 3,000 km (almost 2,000 miles) away, as we are the most easternly point in North Ameerica. Is this even possible? The signal was surprisingly strong, with only a little drift in FM Stereo. After about 15 minutes it began to fade, and within an hour was gone. I mentioned this story to a few hobbyists who thought it was bunk. I just wish I remembered the calls. It was CHR format, and Eddie Money's "Take Me Home Tonight" was either in high rotation or recurrent status.

Can anyone support or deny the possibility of this happening? How would a signal have travelled so far? This is only a normal JVC portable stereo.

Thanks for your help.

Same stuff here in D.C. Monday morning I thought I'd lost my mind when I bumped the "scan" button on the radio and it locked on to 102.1. WIOQ Philly (Q102) comes booming out like a local. I listened to the morning show until I stopped at the cleaners and shut off the truck. I got back into the truck a few moments later and now I'm hearing classic rock on the 102.1 frequency. Within a few moments, the RDS woke up and XL102 (WXXL Richmond) is proudly displayed. I listened all the way to work with nary a flutter, even as I drove right under the WJFK/WJZW diplex array at I-495 and Route 29 in Northern Virginia.

On the other hand, locals have sounded REALLY bad lately. WIHT was being walked all over this morning by a country station. I never could catch the calls (unfortunately the ducting was causing a great deal of distortion).

Some people seem to be more sensitive to compression artifacts than
others. There have been a few occasions when I've commented to someone
about the poor quality of a song playing on the radio, and they've
said they can't hear anything difference.

Actually, he ended up at KRKO radio in Everett. This station's
signal is strong enough to reach as far as Shorline and
possible the Northgate neighborhood, but not Green Lake. I
think the station can be found at 1380Khz on the AM dial. I
don't know if he's still there.

I caught the Hendrie show a few times on KOH in Reno. The first couple shows were interesting although a bit odd. I soon came to believe the "guests" were "shills". I didn't realize he was doing the voices himself.

It didnt take me long to "tune out". I don't care much for his show even though he does get lucky once in a great while and draw a smile or chuckle from me.

I find I can't suffer the show long enough to wait for the chuckle.

Sorry Phil, you're just not my cup of tea.

Fair enough, but why is the sound question (question 3?) in 128kHz
stereo when it only needs to be in 64kHz mono? It don't play on my
computer.

16kHz mono RealAudio is sufficient for an ancient AM radio recording!

Freak FM DX such as this happens only once in a blue moon, and you are a lucky guy to have experienced it! I myself have had it happen from time to time, and while I could offer several explanations about how this could happen on medium wave, I still have volumes to learn about FM wave propagation. Can any of you techies out there offer any possible explanations for Rich's interesting experience?

Always Learning,

Larry Pritchard

Are you sure this European-market radio can be set to receive US AM
stations which are on multiples of 10 kHz? European AM stations are on
multiples of 9 kHz.

I'm sure you are referring to WDUZ/WQLH. WQLH dropped him a couple of years ago because he "didn't fit the format". And when Cummulus took over the stations, he was dropped completely, as WDUZ is now sports talk. Old Ben Laird must be rolling over in his grave! (the two were good friends)
The only Laird-owned station WDUX-Waupaca, is still running him, I believe.

I was looking at something yesterday on the digital scope, fooling around
looking at aliasing effects. As you move up and down in sampling,
you will see all different kinds of effects. I wish I could convert this
visual representation, to audio. Would be interesting, but i am tortured
every day listening to digital crap. They are supposed to
be improving audio, not destroying it!

I think I also said this talking about video!

Beleive it or not, my daughter has a 91 Dodge Spirit as a second car
with an original equipment radio that can be set for 9 or 10 kHz
tuning. I didn't realize this until I reset it to 9 kHz steps
accidentally. Nothing about it in the instruction manual either.

R J Carpenter wrote:

Maybe the best use of your money would be to buy a copy of "Beyond Line
of Sight", a collection of amateur radio propagation articles. ISBN:
087259-402-5 available from ARRL, 225 Main St, Newington, CT 06111 I
suspect that you can order by mail 203-666-1541 Mine says $12 on the
cover, 224 pages.

There also seems to be a "virginity" issue. Once you understand
artifacting in either audio or video, you will notice it for the rest
of your days.

Huh?

National revenue is off this year due to the economic downturn. The stations that have lost the most are the smaller, lower rated stations. It does not matter who owns them. National advertisers prefer to buy consolidated stations, as they are easier to buy, more standardized in procedures and have more uniform billing formats.

And what 'postion' would Clear Channel have to rethink?

I believe this is known as "sporadic E" (after the layer of the
ionosphere) and happens every so often especially in summer. Once,
some decades ago, I started picking up low band VHF TV stations in
places like Mobile, AL and Memphis, TN from Plymouth, NH.

Look at http://www.anarc.org/wtfda/dx_faq.htm

In 1976 I was setting in the den of our tri level house. This means that the den would be like the basement level of houses that had basements. I had a radio which most of you may not have heard of. It was an RCA TV radio with braille numbers on it. I still have the radio. They don't make them any more. I had a set of rabbit ears connected to it along with its built in antenna.

One afternoon on the TV band on channel 3, I picked up a public Television station from Tallas New Mexico aparently on the Texas border. It said that served eastern New Mexico and western Texas.

I'd like to hear Morse code replace regular talk radio. This would
right off eliminate shouting, and the problem of getting 4 hours worth
of material every day.

Surely one station on the local dial could make money with this.

I suppose tone-modulated AM would be the way to go. Different stations
on the same frequency could use different tones.

Chapel Hill / Raleigh / Durham. Often called the "research triangle."

>WUNC we have figured out...sounds like one of
> those NPR welfare cases.

100 kw FM owned by the regents of the University of North Carolina.

>How much is your whim going to cost the
> working stiff?

Switching from classical to news and content programming benefits both the staff and the station. N/T takes a larger staff, and the format has of recent been seen to generate greater listener monetary support, something that classical has a hard doing these days.

: those NPR welfare cases. How much is your whim going to cost the
: working stiff?

The "triangle" is an area in central North Carolina. In the event that you do not know, NPR is not a welfare case. Indeed, you seem to be very confused. No one's whim costs the working poags a single penny.

What a great website www.worldspace.com is. There's a very interesting tidbit deep in the programming information; an audio service in "Hinglish" which I assume is a creole of Hindu and English.

I am constantly amazed that El Paso seems to be the only place in the United States where Spanglish formats are alive, when the real battle for listeners seems to be cross-language.

It also seems that some digital delivery systems are worse than other at this. Here in Indianapolis, we use DadPro and I don't notice it unless there is a lot of high end (heavy cymbals for example.) The Emmis stations, on the other hand, use AudioVault, and you can hear it on every one of there stations...Even on AM WIBC! Isn't digital audio wonderful ;-)

Tu Gusto 1950s Rock & Roll, Rockabilly y Doo Wop? Escuchando Rock-it Radio via tu Computadora en "Real Audio". La Pagina en espanol por Rock-it Radio es: http://www.palmsradio.com/espanol.html

---

Hi Folks,

We have 2 new Rockin' shows in our archives at
http://www.palmsradio.com/rockittext.htm
They feature shows #354 and #355. Rock-it Show #354 features from the outskirts of St. Louis Missouri -- Mike Taylor and another Rockabilly blastoff of his White Rockers series!
In Rock-it Radio show #355 -- yours truly Bennie Dingo was able to scrounge a show together and have it uploaded -- and is a mix of Rockabilly, Doo Wop and R&B. Here are the playlists of the two shows...

Mike Taylor comes out with another Rocker from his personal collection of great Rockabilly.
The 8th song on this playlist is a request made by a Rock-it Radio listener - Benny Joy.
Here is the playlist of show #354...

1. Rawhide -- Link Wray and his wraymen
2. Jitterbuggin' -- The Five Bops
3. Leroy -- Jack Scott
4. Mean Mean Man -- Wanda Jackson
5. Baby my heart -- Mystery Performers
6. Granny Went Rockin' -- Rodney Scott
7. Rhythm in my bones -- Eddie Diamond
8. Ittie Bittie Everything -- Benny Joy
9. If you want my love -- Bobby Lawson
10. Chicken Rock -- "Fat Daddy" Holmes
11. Chicken Walk -- Hazil Atkins
12. Savage -- Alan Barnicoat
13. Teengage bug -- Dwight Pullen
14. Jump and Run -- Ronnie Dawson
15. Tell me baby -- Billy Smith
16. Girl and a Hot rod -- Ritchie Deran
17. Please give me Somethin' -- Bill Allen and the Back-beats
18. Tornado -- The Jiants
19. Keep your hands off of it -- Jerry Lee Lewis
20. Little Bo Pete -- Buddy Miller
21. She's my baby doll -- Terry Clement & The Tune Tones

22. Rockin' Jalopy -- The Alabama Kid
23. Shake Baby Shake -- Johnny O'Keefe

Remember you can download our archives from our archives page at:
http://www.palmsradio.com/rockittext.htm
You do need the Real Player software to tune into our shows.... but you can get the Real Player downloaded for free at: http://www.real.com

If you would like to e mail Mike Taylor about this show he would love to hear from you and his
E mail address is: Metbet@prodigy.net
Also, don't forget to check out Mike's latest and coolest picture in our DJ page
at: http://www.palmsradio.com/bio.htm that's him standing in front of the famous
SUN Record Studio Building in downtown Memphis.

Bennie Dingo does Rock-it show #335

Rock-it Radio Show #335 is good and bad in a couple of ways... it's our first Digital
recording. That's the good news the bad ... well we haven't gotten the hang of all the
adjustments etc. yet to our new system. But we have added just a mix of everything on here.
Including one of our favorite Female Rockabilly bands today Cattie Ness & The Revenge; And from Tail Records and Sweden there is Ollie Vee and the Shamrocks and from Switzerland Simon and the Saddlebags. We have also included some rare recordings of The Prisonaires a Doo Wop group that were from The Tennessee State Penetentiary that were pardoned when they wrote a song about ... The Governor of Tennessee! These recordings also proved that SUN did record Doo Wop as well!

Here is the playlist of show #335...

1. Happy Birthday Baby -- The Shells (dedication to Heather Mc Cready!)
2. Preacher and the Bear -- Big Bopper (dedication to Bob Adams of KVTA)
-- Edsel Commercial
3. Baby I'm Drunk -- Reverend Horton Heat (request by Jodi in Houston Tx.)
4. Wouldn't you know -- Billy Lee Riley
5. Got the Water Boilin' -- Billy Lee Riley
6. When your alone -- Donnie & The Del chords
7. Red Cadillac and a Black Moustache -- Warren Smith
8. Rock N Roll Ruby -- Warren Smith
9. Baby oh Baby -- The Shells
10. Surleen -- The Prisonaires
11. What about Frank Clement -- The Prisonaires
12. Rock, Roll and Rhythm -- Simon & The Saddlebags (Swiss Band)
13. Please Don't Tease -- Ollie Vee & The Shamrocks (Swedish Band)
14. Ka Ding Dong -- The G Clefs

--- More Commercials
15. Deserie -- The Charts
16. We wanna boogie -- Sonny Burgess & The Pacers
17. Find my baby for me -- Sonny Burgess & The Pacers
18. Rock-it -- The Flea Bops
19. 99 Bottles of Beer -- Cattie Ness & The Revenge
20. Three steps to Heaven -- Eddie Cochran (request by Aretha in Sydney Australia.)
21. Someone watching over you -- Big Bopper

If you want to send any comments on this show well, you sure can at our e mail address at:
rockitradio@aol.com -- plus remember to send in those requests, and dedications too!

Congradulations To Rock-it Radio Listener club member David Atkins out of right here in Ventura, California ... He has become the 1000 persong to join our listeners club!! And as a special gift will be receiving a Rock-it Radio T -Shirt and the CD of his choice in our Rock-it Store. Dave just e mail us and let us know the size you want of the shirt and the CD you want!

New News of the North on Rock-it Radio

You want to know what News should really be like? You tired of all the terrible news going
on in the large urbans cities but still want to stay in the know of what's really going on?
Well then check out News of the North ... presented weekly on Rock-it Radio (because
news should only be once a week!) News of the North is hosted by none other then Shabree Wolfpaw.
And a new show was updated on 8/24/01.
Rock-it Radio is the sole internet provider of news of the north... just go to our main webpage at: http://www.rockitradio.net
and click at the top of the page of our audio links to: "News of the North"
If you like News of the North make sure you check out our Sister Station of First Nations Broadcasting at:
http://www.palmsradio.com/upnorth.html

New Photos added in our club pages....

Our Yahoo clubs of Rockabilly and Doo Wop ... we have added some pictures of some Rockabilly and Doo Wop groups. We will even attempt to paste some in this newsletter that are capable of html e mail. If you want to see all our pictures check them out in our yahoo clubs at:

Rockabilly Venues in the Midwest

With many thanks to Dixie that sent us this e mail of all the cool venues coming up in the Rockabilly scene. Here is the news of what's happening this week in around the USA.

This is just a heads up on what is going on in the course of a week or so. On Friday August 31st, BR549 will be here in Springfield, IL. Brought to you by Sangamon Valley
Roots Revival, The Illinois Times, Recycled Records and On Broadway. The Show will be held at On Broadway bar at 210 Broadway in Springfield, Illinois.
The cost is $12.00 in advance and $15.00 at the door.
If you are planning on making this this an adventure and you need a room for the night,please contact the Mansion View Inn at 217/544-6211 for information on room prices
and don't forget to tell the front desk that you are there for the BR549 show, they might just hook you up with a special rate, since the bar and the hotel are owned by the same person.
For more information and ticket sales, please contact On Broadway at 217/523-0210 or email me (DIXIE) at Rebelene@ilbbs.com. Doors open at 9pm and it's a 21 & up show.
HOWEVER...this news just in, under 21 can come with a parent or guardian. Huh, go figure!!
Also the following day Saturday September 1st, is Dirty Ernie's Greaseball in St. Louis Missouri.
Held at Mississippi Nights / Lalede's Landing, 914 North 1st Street in St. Louis Mo.
Doors open at 7pm, show starts at 8pm. This is also a 21 & up show. Featuring bands will be Narvel Felts, Billy Lee Riley, the Bottletones (a personal favorite) and the Crazy Beats. Ticket costs are $15.00, for sales please call 421-3853 or you can charge by phone at 534-1111, tickets
are also avilable at Metrotix. For information, please contact Ernie at DirtyErn13@yahoo.com
or you can go to his webpage at www.geocities.com/dirtyern13.

Thanks again Dixie for that!!!

Rock-it still looking for Advertisers and Sponsors!

If you have an online business why not check out our very reasonable Advertising rates on Rock-it Radio and become a Rock-it sponosor! And drive more people to your website.
For rates and information ... go to our advertising page at:
http://www.palmsradio.com/ad.html

Get your Rock-it Radio T- Shirts at the

Rock-it Store

You can order your Rock-it Radio t shirt with our station logo from either our Rock-it
Radio Store at: http://www.palmsradio.com/store.html
or just e mail us for details and cost at: Rockitradio@aol.com
Purchasing a Rock-it T Shirt also helps pay for the costs of Running the Rock-it and you will be supporting the music that we are playing!

Well that's it for now folks,

Remember if you are reading this newsletter in a newsgroup you can get more information if you join our listeners club -- its easy and free and keeps you in the know of what's being played at the Rock-it. Just go to our main page at: http://www.rockitradio.net and at the top
just click to get our mailing list.

Until Next time,

Take Care Everyone,

Bennie Dingo

I picked up Houston and Kansas City once and I live in central Oklahoma. Thats around 600-miles. so yes this can happen, but it's rare - the signal bounces off the ionosphere just like for the AM band. I'm not sure how/why it happens, but it does. ;-).

Anouther Clear Channel shill...putting forth the company line of bullshit. the fact is that national advertisers don't like being told they HAVE to buy all stations in a group, when all they wanted was the one with the highest ratings. Remember Radio is used to target customers...not broadside them. Clear Channel will get everything they want...and then it will all fall on top of them! Go ahead Clear Channel force everybody to do it your way...then see what happens!

The only real difference between the DX-390 and DX-392 is that the 392 has a built-in cassette deck, which makes the unit slightly heavier. It helps greatly in recording hard-to-receive stations for playback in getting that elusive ID.

The radio is a great performer. It has only three drawbacks that I can ascertain:

1, the audio quality (as you mentioned). I generally run an external communications speaker off of the radio.

2, During tuning, the audio is muted, so you cannot hear stations going by (although you can still see the signal on the meter).

3, It reproduces FM Stereo, but only when you have a stereo headphone plugged in.

Otherwise, it is a great radio. I use it mostly for AM and shortwave, so the other drawbacks (except for #2) are not a big deal.

Paul.

I just returned from a trip to Germany a month ago, and took note that there are several Welk-style programs still running on German TV.

One we saw was a talent competition set in a county fair (well, in Germany they're called fests) background. Several acts performed, moving through the background a la Welk, and then while call-in votes were being tallied, the professional staff of the show did a musical revue in the Welk format. While the children's chorus finished second in the voting (they weren't that good, but probably had a lot of relatives and friends), the winners were a late-20ish couple who sang a love duet called "Das ist gud".

I wouldnt bother with the 2.4 ghz. stuff if you're in a metropolitan area. I was using this for point to multi-point stuff on mountaintops. Way too many hits from other sources. Finally had to go to 5.8 ghz and even then I was taking hits.

Also, if you go with Lynx make sure it's the higher generation (3rd I think) because they had problems with the first couple generations.

Most likely it is tropospheric ducting instead of skip. Sporadic E skip is extremely rare, and can happen under only the right conditions.

The Perseids meteor shower also occured recently, so it is possible that you might be able to receive distant FM stations via "meteor scatter."

BTW, listen for some Sporadic E skip in the next few days. There is a huge proton flare headed for Earth from the sun; it is said to be very electrically active. This might actually cause some sporadic E skip to occur.

Paul.

Here's one for you fm dxers! On approximately 87.7 I picked up the audio portion of Cablevision's HBO loud and clear. On the exterior of the room where my fm receiver is located, is a cable splitter that hooks up two of my tvs to the cable system. I suspect that the signal for the HBO channel was "leaking" from that splitter and being received on my fm receiver. I wonder if this a common occurrence?

Evan

The station I normally listen to in Houston played some Christmas music this past Thursday on their 5 PM program. I liked listening to that on the way home from work. It was a hot day that day, and I DID feel about 10 degrees cooler! I'm sure that was just mental, though. :)

Wow... Nice to see a bunch of replies to this thread.

It must be a select few of us who can hear this because most people can't seem to tell a difference between highly compressed material and the original source!

I was having a discussion the other day with some friends about how bad the audio on the TV networks FX and FXm are, both on cable and via DBS. One person told me he *likes* the way it sounds, saying it had more high-end clarity to it! Yuck. :/

What's really strange to me about all this is that some forms of digital compression get on my nerves a lot and some of it I don't even notice at all, usually! I get easily fatigued listening to many of our local music stations (in Birmingham -- all the ex-Dick Broadcasting stations have to be the worst sounding music stations in the US) but yet I almost never notice artifacts when listening to my little portable minidisc player.

In the online world, I can't stand the audio from most mp3 encoders I've tried unless I jack up the bitrate excessively... Yet Windows Media files use more compression and sound a lot better for me.

Then with telephones... I can tell a Nextel phone from a mile away, and it isn't because of that neat little "beep-boop" the radios make. ;-)

As others have said, this is caused by 'Sporadic E' propagation. It
occurs mostly during the summer months, when you suddenly hear stations
'popping up from nowhere'. They are usually located 500 to up to 1500
miles away. The effect is something like having small mirrors floating
in the sky. One moment, there is nothing there, and the next (when the
mirror is in just the right position) you hear a station at a
considerable strength. Then, suddenly, it disappears (maybe, never to
return for some time) as the mirror drifts or fades away.

Sporadic E affects radio signals between about 25 and 150MHz. It peaks
at about 50MHz. In the UK, we frequently get strong signals from Italy,
South of France and Spain.

Ian.

And how much will the working stiff be strong-armed into paying?
Plain English, non-NPR translatation: how much of your nut is covered
by the taxpayer?

> Isn't digital audio wonderful ;-)

As technology gets more complex, we wind up with more and more people working on systems they don't understand. In the 30s, the best and the brightest were in radio engineering. Hot damn... instantaneous communication right through the ether.

But today the curious technical mind sprints right past amplutude modulated mono, so its no surprise that we have jocks taking MP3s into work, playing them out of $59 soundblasters into AudioVaults and then scratching their heads when it "sounds funny."

I am real big on digital, but we need people along the path who understand the difference between production formats and distribution formats, and that potatoes get better twice-baked, but MPEGs don't.

Gene Heskett sends Greetings to Radio ;

>> >WUNC we have figured out...sounds like one of
>> > those NPR welfare cases.
>>
>> 100 kw FM owned by the regents of the University of North Carolina.

>Yep. On the public nipple.

Thats not always true. Here in WV for instance, although the tv's are owned by the universities, they are about 99% public donations supported, both for the radio and tv. We support that which is good, and West Virginians seem to do a decent enough job. Sure, theres a fundraiser from time to time, but nothings free. I've probably put 600 USD (voluntarily, not via hidden taxes)in it so far this year, some to tv, and some to NPR type radio.

What have you contributed to yours if I may be so rude as to ask?

Cheers, Gene

Are you sure the radio is not using a diversity circuit??? Sony radios used to have these and some others did too! When moving, the radio would "select" the best signal from the antenna with the strongest signal. If working properly this scheme was seemless to the ear. Could the radio have a diversity circuit that is manfunctioning?

I'm looking for the AC stepdown transformer used for Harris/Gates audio consoles like the Executive, Diplomat, President etc. This is the can shaped transformer that takes 117 VAC and steps it down to 3 independent 28 VAC feeds to the console's internal power supply. If you've got an old Gates board gathering dust, I could use the part!
I'll pay a reasonable price and shipping. Thanks!

It shouldn't be. The audio for TV ch6 is at about that frequency though, so
I'll bet that's where HBO is on your system. You need to check to see how
much signal is leaking. If there's more than X amount, the cable company
doing its sweeps will find it and turn off your cable until you fix it.
That's per mandate from the FCC. It's especially important when dealing
with the public safety frequencies that cable overlaps.

Sometimes the playback device/decoder can screw things up. I tried that Sony MP3 boombox that Radio Shack sells. Had to take it back, it sounded awful on material that sounds fine on other decoders (including one my company makes, but I'm not saying who that is because I don't want to advertise in this NG).

...well, you can get the same basic effect by watching a video of RUNAWAY TRAIN when it's 100 degrees outside :-) ...

...Larry Lujack used to wait for the first 95+ degree day in Chicago so that, at 5:20 that afternoon, right in the middle of rush hour and knowing full well there were at least a dozen boiled-over engines on the Kennedy Expressway alone, anyone tuned to WCFL would hear Bing Crosby dreaming aloud of a white Christmas...

For the last year or so I have been transferring my Dad's and my 200+ reel
to reel collection over to CD-R.
Some of my Dad's early tapes from the late 1950's include music from those
Welk shows along with other similar shows. It is a blast sit back and listen
to these tapes from a personal historical perspective.

The National Radio Club is an all-Mediumwave group. DX tests are generally a way that listeners can hear a station that would not normally be receivable were it not for the special test and the content that breaks through interference on crowded channels.

This is supposed to be an amusing comeback? The Triangle is one of the most progressive technology and and educational zones in the US.

> > 100 kw FM owned by the regents of the University of North Carolina.
>
> Yep. On the public nipple.

Actually, No. WUNC is mostly listener suported, as is, in part, All of NPR (which WUNC is affiliated with). It also has substantial business underwriting support. You can see this on the station's website, http://www.wunc.org/

> > Switching from classical to news and content programming benefits both
the

> by the taxpayer?

One of the functions of government in most of the world is to supplement those things offered by the private sector. In this case, things considered "the arts" are more than often subsidized or supported by governmental money; WUNC apparently pays a good part of its costs through listener and business support and probably realizes that this support will be greater offering a news and analysis format. Similar things have happened with Minnesota Public Radio, which has proven that such operations can be relatively self sustaining and offered good programming alternatives at the same time.

From: Kevin Tekel <kevtronics@compuserve.com>
Message-ID: <tp05kunmscn8a1@corp.supernews.com>
Source record: 13430

I had a Radio Shack DX-390 (clone of Sangean ATS-818). For reception quality, it is an excellent radio, but the audio quality is about as good as a tin can with string attached! The specs indicate its audio response drops off like a cliff after 2 kHz, and as a result it sounds like somebody talking on a cheap telephone with their hand over their mouth. And that is in "Wide" bandwidth mode! In "Narrow" bandwidth, it is just plain unintelligible. Maybe OK for Morse code, but not for speech or music.

I have not tried the other Sangean/RatShack digital tuning models to see if their audio is any better. I have the RatShack DX-397, which has excellent audio (nice wide bandwidth), but it is a single-conversion analog-tuning model so reception is not that great.

I still have yet to find a better-overall shortwave radio than my old vacuum-tube 1950s Hallicrafters, but obviously that is not a radio you can pop a couple AA batteries into and carry around. But for home use, its great sensitvity and wonderfully "warm" and "mellow" vacuum-tube sound makes it a pleasure to use. Hook up an external speaker and it really brings out the "hidden" fidelity of shortwave radio... SW doesn't have to sound like a tin can!

Fi Glover, whose excellent travel/radio book "I'm an Oil Tanker, Travels with my Radio" I am reading at present, was on BBC Radio 2 today (Friday) as a guest of Steve Wright. She did some plugging of her book and spoke with enthusiasm of the joys of listening to different radio stations.

Her book is superb and very much about DXing. She visits some interesting stations around the world and even gives London pirates a few mentions.A real treat!

This is a must for keen travellers and DXers as she is dedicated to both and enjoys
listening and visiting true independent and local radio, which sadly is getting harder
to find in the world.

Published in the UK by Ebury Press at ?9.99 in paperback (audio abridged version also available at ?8.99).

Mike

It is an excellent DXing machine. As mentioned earlier, the only real drawbacks are: The audio is muted during scan and the audio quality is somewhat less than the Superadio II (or other incarnations)... And of course the price.
The pluses are that it is a full World Band receiver. It covers Short Wave, Medium Wave, Long Wave and VHF-FM bands and it has a great digital tuner capable of tuning in almost any increments.

3075. When is Macon Georgia going to make the change?

Why apologize? If they do a good job, they will continue. If they don't,
they will be bought out and things will change.

I have a dx 392 that works pretty well. At least it works better than that
old crazy dx440 they came out with a few years back. The dx392 works
pretty good on ssb also.

You've probably heard from a number of people by this time, but the answer is yes, long distance FM reception happens... most often in the Summer. I heard Indianapolis loud and clear near Yellowstone Park and have picked up El Paso area TV in Florida. Hartford, CT was almost common at times on Channel 3 in Daytona Beach, FL! There are actually clubs set up for people who do this as a hobby (listening to distant radio or TV is referred to as listening to or viewing "dx"). Dx'ers (AM, FM TV and shortwave) often join a club called:

amfmtvdx@qth.net

Check it out if you like. It's free to join. There are two kinds of long-distance FM skip... Tropo (tropospheric skip) and e-layer (signals that bounce off the e-layer in the atmosphere). Occasionally, skip on FM or TV actually crosses the Atlantic Ocean! Anyway, just wanted to make sure you knew that you are NOT crazy... this really happens.

Take care,

Brian Goodrich
SuperCFL@aol.com

> That's per mandate from the FCC. It's especially important when dealing
> with the public safety frequencies that cable overlaps.

Another motivation is that that signal that is leaking out isn't reaching
your TV and VCRs. Which means noiser reception, and ghosts
especially if the cable channel is duplicating an over the air channel
on the same channel.

Cause is likely to be a loose connector at a splitter or such, or loose
coax shielding at a connector. Tune in the HBO signal on 87.7 on
your radio while you tighten connectors. When the signal suddenly
gets weaker you found the leak. There might be more than one leak,
but somewhat unlikely.

What market size? What format? Will you be live or syndicated? If you aren't live then why should the local's listen to you? If you are not syndicated then where are you going to get the money for talent and resources? What is the station's billing and ratings history? Are you going to attempt to make a go of it as a stand alone or are you adding to an existing group? What are the market totals for revenue and your format's audience? What is your plan to increase your share of both? Is your goal to run this station as a business or just have a property to support your tanning on the beach? Got a GSM, PD, and other key people in mind or know where to find them? How much are you putting up? How many partners? 10-grand doesn't buy much radio station. 100x 10-grand doesn't buy much radio station. 500-1,000x 10-grand gets you into the game with a viable property, any less than that and your only buying an expensive hobby. So I'm going to be one of 1,000 partners trying to squeeze a buck out of a single property in a small market? Not much of a stake. Or maybe I'm one of a few guys sending you money to feed your desire to live on the beach?

3082. Transmitter for conference translation?

Newsgroup: rec.radio.broadcasting

What can this group tell me about the group/people in the subject line?

I've rx'd one of those form letters to sign allowing them to put an FM 'translator' of 250 watts about 2.5 mhz above our hdtv assignment (if the commish ever issues it that is), but without any technical data or locations given.

I tend to look askanse at such poorly done letters, but before I bounce it on its collective ear, what say those who may have had dealings with them?

Cheers, Gene

You have crappy radio stations there because you are in the boondocks
without enough advertising revenue to support profesional work.
WUNC's solution, like all good socialists, is to rob from others to
pay for what they desire.

WCBN WILL DESTROY YOUR FEEBLE FORMATS

WCBN - Over 25 Years of Freeing Your Mind - Listen to us online!

WCBN is the University of Michigan student-run community freeform radio station in Ann Arbor, Michigan. We broadcast at 200 watts to the University and its surrounding communities from the basement of the Student Activities Building in downtown treetown. We have been broadcasting a genre-less overview of music, news, and public affairs for over 25 years.

WCBN's musical format is freeform, with some specialty shows. Freeform involves all different kinds of music, including jazz, reggae, blues, hip-hop, country, rock, and just about everything else under the sun. Instead of telling our DJs what to play, we allow them to select their own recordings from our vast and unique library. It is their responsibility to mix together many different kinds of music in an intelligent fashion, and show links between musical genres.

Click here to listen to our live WCBN-FM Ann Arbor broadcast!

Have you ever actually visited these "boondocks"? WUNC is not your typical college station... they
play a lot of local music, have a very professional and polished sound and are heavily involved in the
local "scene" for want of a better word. They also originate several shows for NPR. Much more so than
the Clear Channel outlets infesting the dial with their McRadio nonsense. On the other hand, this is
not a big market for classical music but the Triangle has another fulltime classical station, WCPE-FM in
nearby Wake Forest. WUNC's move to a news-talk format, especially if it is commercial-free, can only be
an improvement.

Kindly identify yourself and I will tell you more. The station is in Panama City Beach, FL. 1480 Khz, 500 watts days, 87 watts nights. Non-directional. On the air since 1965.

There are no financials as this is presently run by a Jr. college!

I am not doing this to live on the beach.

We wish to bid $100,000 for the station.

With all due respect, you seem a bit cynical. There is no need to be, This really is a good situation. As you may know, this is the famous mecca for the college crowd, especially during Spring break.

I propose traditional country format.

Should you wish to call, best times are early mornings, Tuesdays to Saturdays (EDST) Not this Tuesday tho.

Cordially,

Meyer Gottesman
(Semi-retired broadcast engineer)

WCBN WILL DESTROY YOUR FEEBLE FORMATS

WCBN - Over 25 Years of Freeing Your Mind - Listen to us online!

WCBN is the University of Michigan student-run community freeform radio station in Ann Arbor, Michigan. We broadcast at 200 watts to the University and its surrounding communities from the basement of the Student Activities Building in downtown treetown. We have been broadcasting a genre-less overview of music, news, and public affairs for over 25 years.

WCBN's musical format is freeform, with some specialty shows. Freeform involves all different kinds of music, including jazz, reggae, blues, hip-hop, country, rock, and just about everything else under the sun. Instead of telling our DJs what to play, we allow them to select their own recordings from our vast and unique library. It is their responsibility to mix together many different kinds of music in an intelligent fashion, and show links between musical genres.

Click here to listen to our live WCBN-FM Ann Arbor broadcast!

Aren't those the guys who have a few full power stations and about 2000
translators all over the country running off the bird 24/7 with a religion
format? The ones I'm thinking of are clear abusers of the concept of
translators and should be bounced on their collective ear.

The latest from Folk Image, the Internet's D.J.'d Folk Music Audio Website
http://www.folkimage.com

Hi Everyone,

Due to an unexplained incompatibility that developed between my FTP client and our media server, the latest Folk Image show, dated August 16, 2001, was not working for more than a week after I made the link to it available. My apologies to anyone who wasted time attempting to play it.

I did find a successful workaround for loading the file a few days ago, so it's now ready for your enjoyment. On this two hour show, you'll hear the newest from David Buskin, Mary Chapin Carpenter, Hunter Moore, Eric Bibb, Darryl Purpose, Roger McGuinn, Jez Lowe & Jake Walton, Lori McKenna, Annie Wenz, and the Afro Celt Sound System. You'll also hear a couple tracks from my pick of the month, the debut effort from Molly Pitcher.
http://www.folkimage.com/01_0816.asx
http://www.folkimage.com/playlists/01_0816.html

In spite of the occasional snafu, such as described above, let me hasten to add that generally, when it comes to the fickle, convoluted world of streaming Internet media, we at Folk Image keep things far simpler and stable than a lot of what I've seen out there. A big reason for the stability is our media provider, Playstream [http://www.playstream.com]. I wouldn't hesitate to recommend them to anyone who is not satisfied with their current provider. Buffering is now almost non-existant, even with the slowest 28.8 kbs dialup.

As for simplicity, we don't assault you with pop ups and java-encoded player windows that you have no control of. We let you use your system's own player, and it's the one that comes with every Windows operating system. If you especially like a certain show, you can save the link to your player's playlist and play it again and again for as long as I am able to keep that show on the server. Whether you enter our site through its home page, or click on a saved link in your player, you are no more than two additional clicks from hearing the music.

"Simplify, simplify, simplify!" Those are the words of Henry David Thoreau, the philosophical godfather of our broadcast predecessor, Walden 1120 radio. I hope we have taken that advice to heart. If not, let me know. If you have hesitated to check us out in the past because you've been burned by other media content creators who had no respect for your time, click on the .asx link above. If you are on line, your player should open right up and start playing music.

Best wishes and enjoy the rest of the Labor Day weekend.

-Jeff

Does anyone besides me remember a stereo video TV test done in New York City in the 1970's ?

Think it was around 11pm one night WNET PBS channel 13 and WNEW channel 5 (now WNYW) teamed up and broadcast Bob and Ray doing silly things like bouncing a ball between each other but Bob was on channel 13 and Ray was on channel 5. We put our old Zenit h 19 inch sets next to each other to watch the show.

No, if they manage to crank out maximum product at minimum cost, what with their Arbitron scam inflating ratings so that all the major stations (who subscribe to arbitron) get a piece of the "action", airing up to 20 minutes of commercials per hour, homogenizing the product to the absolute lowest denominator (CELINE DION MUST BE STOPPED, AS MUST FOREIGNER), then they'll make their profit projections and continue onward.

> If they don't, they will be bought out and
> things will change.

What you consider "doing a good job" the true radio fans consider "shitting in the radio nest 24/7".

Hey, tough shit for us--you've got all the cards.

Hope you're happy.

The Raliegh-Durham market is the 48th largest in the USA, with radio revenues this year calculated at $83 million. The average revenue per mean station is $5.7 million, or nearly a half-million per month.

The market has some good radio stations. However, the approach that public stations often take to news and talk tends to include more in-depth coverage and other features that do not fare as well on ad suported, ratings driven commercial radio.

> WUNC's solution, like all good socialists, is to rob from others to
> pay for what they desire.

This, of course, is not true. What we have here is a case of a listener supported station which is simply adapting to the needs of its support base. there are some things in society that private enterprise will just not provide, such as museums, schools, etc. There are other areas where the private and the public sectors share, broadcasting and health care being examples.

Many posters have mentioned that this kind of station is usually close to totally listener supported.

RUMOR -

Infinity Broadcasting's KFRC San Francico has hired West Coast Ledgend Bobby "What A Guy" Ocean, America's Favorit Disc Jockey, for afternoon drive, 3 - 7pm starting today, Tuesday September 4.

Ocean most recently was the Voice of the Oldies Station at 99.7 FM for over 7 years.
Through the years, Bobby has done some fill in work, however, This marks the first time that Bobby will be on the air, on a full time basis, since his stint at KYUU in 1988. (KYUU is NOW 99.7 KFRC-FM) In 1986, Bobby was at the ledgendary BIG 610 KFRC right before the switch to Magic 61.

Bobby spent many years entertaining Northern California at KFRC in the 70's and 80's as well as being a part of Bill Drake's Boss Radio format at KGB in San Diego and KHJ Los Angeles. Bobby currently runs a production company in Marin California.

This posting is in no part connected to Inifinty Broadcasting or Bobby Ocean©Inc.

3112. Re: WUNC GOING NEWS-TALK

Newsgroup: rec.radio.broadcasting
Date: 2001-09-05 00:08:00 UTC
From: Jim W <jwwNIX@SPAMMmags.net>
Message-ID: <tpar7078is7t9c@corp.supernews.com>
Source record: 13373

For what it is worth, I am a WUNC original staff member. Although the web site describes WUNC as being 25 years old, that is not totally accurate. It originally came on the air in 1952, using the University's communication center studios. The station
shortly constructed studios in the basement of the communication's center, Swain Hall.

Announcers that night included university students Charles Kuralt (no description needed), Carl Kasell (long time newsman on NPR's Morning Edition), Don Robinson (retired a few years ago as the promotional voice of CBS sports), and me--among others.

We broadcast about 4 hours a night. A couple of years later WUNC-TV channel 4 also appeared from the same building. In addition to carrying a academic load as a history major, I spend chunks of my time booth announcing for TV, doing one night a week shifts on FM, and picking up a few bucks weekends at commercial WCHL Chapel Hill (which also employed Kuralt, Kasell and Ty Boyd...later morning man at WBT, and who did occasionally fill ins for Arthur Godfrey on Godfrey's radio show's waning years).

The original transmitter was about a 10 KW plus donated by WBT Charlotte...after they apparently decided there was no future in FM. Another station I later worked for apparently came to a similar decision when it donated WTOP-FM to Howard University.

The first incarnation of WUNC died with the transmitter's death, probably in the 60's. I am not certain when. WUNC's reincarnation came in 1976, and has prospered ever since.

After WTOP I even prospered a bit...as an airline pilot. A smart career change.

Part of what I was impling. If the property that this guy is talking about was worth anything it would not be on the open market. Stations haven't been sold that way since deregulation took a full head of steam around 1996.

I believe one station up here dabbled with it, but because the TV's weren't equipped for it, it was underwhelming.

WGBX, channel 44, used to transmit some type of stereo digital encoding during the day when they weren't doing TV. You saw bars on the screen through the static. Whatever it was, it didn't sell.

Back in the early 1970s, some radio stations experimented with four-channel broadcasting. That, too was very underwhelming.

In Boston in the early 1970s, two FM radio stations and a TV station decided to have a four channel concert simulcast. The instructions were clear - turn down the volume on your TV, get two stereo systems, tune each to the different radio stations. One was WGBH-FM (non-comm), and when commercials came on, the WGBH signal was dead air, or music. I think the other station was WBCN-FM (commercial). During one lull, WGBH did some fundraising - so the public heard spoken words from the FRONT speakers during that time, and made a point that up to now, you have not heard any spoken announcements or commercials from your front speakers..... etc..

Hey!

Sorry if this doesn't belong here or is considered OT.

Just inviting you all to check us out. The site is almost finished. Our live show goes back on the air on September 14th, 2001 at 9pm EST.

We're a non-profit show that supports new artists. We make funds to run the show by donations and sales from the gear shop and camera subscriptions.

http://www.broadandcast.com
http://clubs.yahoo.com/clubs/broadandcast

And now, for a question.. We want to turn ourselves to the "real" airwaves vis-�-vis FM radio as well as what we're currently doing.. We're located in Ontario Canada... Soooooooo, where do we go from here??? You're talking to an absolute newbie with regard to broadcasting on FM.

You can e-mail me or answer me here if you like.. Any help is appreciated :)

Whisp

News Anchor Bill DeWeese of KTRH in Houston passed away Monday of a Heart Attack. I don't have his official bio, but Bill started at KTRH shortly before I left my position there in 1989. His duties included reporter, Assignments Editor, and for most of his tenure at KTRH, co-anchor of the Afternoon and PM Drive news blocks.
Prior to KTRH, Bill was News Director at KBUC (KBUK?) in San Antonio. He left KBUC after it was sold and switched from Country to Hispanic. He was also in the military (Army I Believe) during the Vietnam war, and also served in the Texas National Guard.
Bill was 53.

Wow! Market 48! Y'all must got buildings neigh onto two stories high!
WFAN, alone, did $64-Million last year.

> The market has some good radio stations. However, the approach that public
> stations often take to news and talk tends to include more in-depth coverage

> commercial radio.

You are partially right. Welfare radio doesn't have to worry that it
is spewing electricity into space and that nobody is listening. They
get to go to the taxpayer supported Corporation for Public
Broadcasting and do-gooder department of corporations looking for
write-offs that also look publicly good. BTW those ratings and
commercial loads on real radio stations are a far more accurate
reflection of public interest than money sent to fake radio.

> . What we have here is a case of a listener

> examples.

Could you be any more wrong? I doubt it. Having already addressed the
myth of welfare radio's "adapting to the needs..." yadda yadda I'll
simply point out that the for-profit museum and school industries are
both extensive and very, very healthy. They are smaller on individual
scale, as a rule, because they must compete with tax-funded facilities
which need not be concerned with waste, fraud, abuse, stupidity or
little things like performance and results - they need only be
concerned with ploughing their congressional representative with
enough campgain money, liquor and broads (I'm including the last two
so that I don't miss the Kennedys)to keep their approprations flowing.

> Many posters have mentioned that this kind of station is usually close to
> totally listener supported.

Not even close to the case.

So, the entire market only takes in slightly more than 18-million more
than just WFAN did, with a 2-share no less, last year.

> The market has some good radio stations. However, the approach that public
> stations often take to news and talk tends to include more in-depth coverage
> and other features that do not fare as well on ad suported, ratings driven
> commercial radio.

That is because being on the public dole and accountable to nobody
they do not have to compete in the marketplace. That frees them up to
waste as much electricity as they wish without regard to whether or
not they achieve viable audience.

> What we have here is a case of a listener
> supported station which is simply adapting to the needs of its support base.>

Not even close to true. What we have here is a collection of elitists
who tap into corporate charity funds and the taxpayer supported
Corporation for Public Broadcasting in order to induldge their own
whims.

> there are some things in society that private enterprise will just not
> provide, such as museums, schools, etc. There are other areas where the
> private and the public sectors share, broadcasting and health care being
> examples.

You're kidding, right? While smaller in scale, private sector museums
and schools - especially schools - are thriving! And they are only
smaller in scale because it is difficult to effectively compete with
welfare versions of themselves who only need plough their local
congressional delegation with enough liquor, broads and contributions
to keep those appropriations flowing! Why do you think that NPR & PBS
exert such effort trying to portray socalism as a viable system?

> Many posters have mentioned that this kind of station is usually close to
> totally listener supported.>

If these stations had to depend on listeners to make their nut they
would all be playing Brittany Spears and O-Town.

> onward.

Excuse me, but in case you haven't heard, Celine Dion has put her career on hold to become a mother. She has no intentions of continuing her music career for now.

Also, Foreigner haven't had a hit in 15 years--I don't consider them a major force in contemporary music.

> What you consider "doing a good job" the true radio fans consider
> "shitting in the radio nest 24/7".

What makes you a "true radio fan?" I have no love for Randy Michaels myself, but the adult contemporary format has long been a valid format and has supported a large number of listeners who like it very much. Just because you don't like the music doesn't mean that it's not valid--and what gives you the right to dictate what other people should listen to?

In fact, the Cheap Channels of the world have laid waste to every format--WLIT in Chicago, once one of the best ACs in the nation, has become a shadow of its former self under Michaels (and the wrecking crew at AMFM before the merger of AMFM and Cheap Channel). Unca Randy has even forced a "morning zoo" show on the station, has fired employees right and left, brought on Delilah and probably plans to cyberjock in the future. So don't call me a Clear Channel apologist.

I'm hundreds of miles away from this situation, being a resident of Ft.Lauderdale florida and part of the general Miami-Ft.Lauderdale radio and TV market, but if I could interject something as an outsider, I'd appreciate it. I'm not sure RalieghDurham is really the boondocks, as the last time I checked it was a pretty big place. If you want the boondocks, check out my home town for the first 26 years of my life, Tallahassee Florida. I love it, and visit my folks often but most of the people listening to WFSU fm <the npr station>are volvo driving liberals<heh heh> and the coffee house intellectuals at the university mostly. I've complained , in the past mostly, about the leftward slant of NPR but I'll tell ya, I do a whole lot of listening anyway for one huge reason: I LOVE the calm, direct, anti-MTV, thinking-man's tone of the npr broadcasts. If the rest of the media is helping to dumb-down America, then I think NPR is slowing that process down a bit.For that, I tune in when I can. Interesting talk, guys. thanks. geoff.

That was for audiophiles who had the Sony PCM-F1 processors, which were usually used to record CD-quality digital audio on a VCR. I don't know if they used Sony's 16-bit format or the EIAJ standard 14-bit format, which other Japanese makers were using (the Sony processors could handle either).

> pay for what they desire.

First of all, could you kindly sign your name? It must take a lot of courage to make the ridiculous statements that you make when you don't have a name to back them up.

And to quote from WUNC's own web site (http://www.wunc.org/about/faq.html):

I heard WUNC gets government funding. How much?
WUNC receives no funding from the state or the University of North Carolina at Chapel Hill. State support was eliminated in the early 1990s. WUNC receives a grant from the Corporation for Public Broadcasting, a federal agency, to help offset the cost of purchasing NPR programs. In the most recent fiscal year, the CPB grant was for roughly $311,000, less than ten percent of WUNC's overall operating budget. Ninety percent of our operating funds come from individual contributors and donations from local businesses.

That's pretty much the same as the rest of the nation--and a relative pittance compared to the amount of taxpayer money wasted by the military all year-round.

And in case you didn't know, because of the increased number of corporate underwriting announcements, people on the far left are now claiming that public radio has "sold out" to "Evil Capitalist Corporate AmeriKKKa" and has ceased being an alternative. Which means they hate public radio as much as you do--although you hate it because it tends to treat blacks, women, Latinos, Asians, gays and lesbians as human beings.

But I guess people like you think that Randy Michaels and Mel Karmazin are broadcasting giants and that radio stations are only licenses to print money, not provide public service. Shame on you.

Quoth ktalkradio@aol.com (Radio) in <tpkr7jc0lpi6a2@corp.supernews.com>:
|
|No doubt, but that won't change the fact that WUNC and WCPE are
|welfare cases.

No less than commercial stations are welfare cases, profiting from
licenses to a publicly-owned frequency for which they pay next to nothing.

Your employers are suckling at the public teat every bit as much as are
WUNC and WCPE. If you were required to pay your way, paying an annual
licensing fee that even approached the value to you of the frequencies
you occupy, you'd be screaming bloody murder.

So heed my advice; don't protest too loudly about public radio, lest
public scrutiny be aimed at the shaky foundation upon which your own money
machines rest.
